

Candidate A Exemplar Work

Part 2 of 2

GCE in Applied ICT

OCR Advanced GCE in Applied ICT: H515/H715

Unit G053: Developing and creating websites

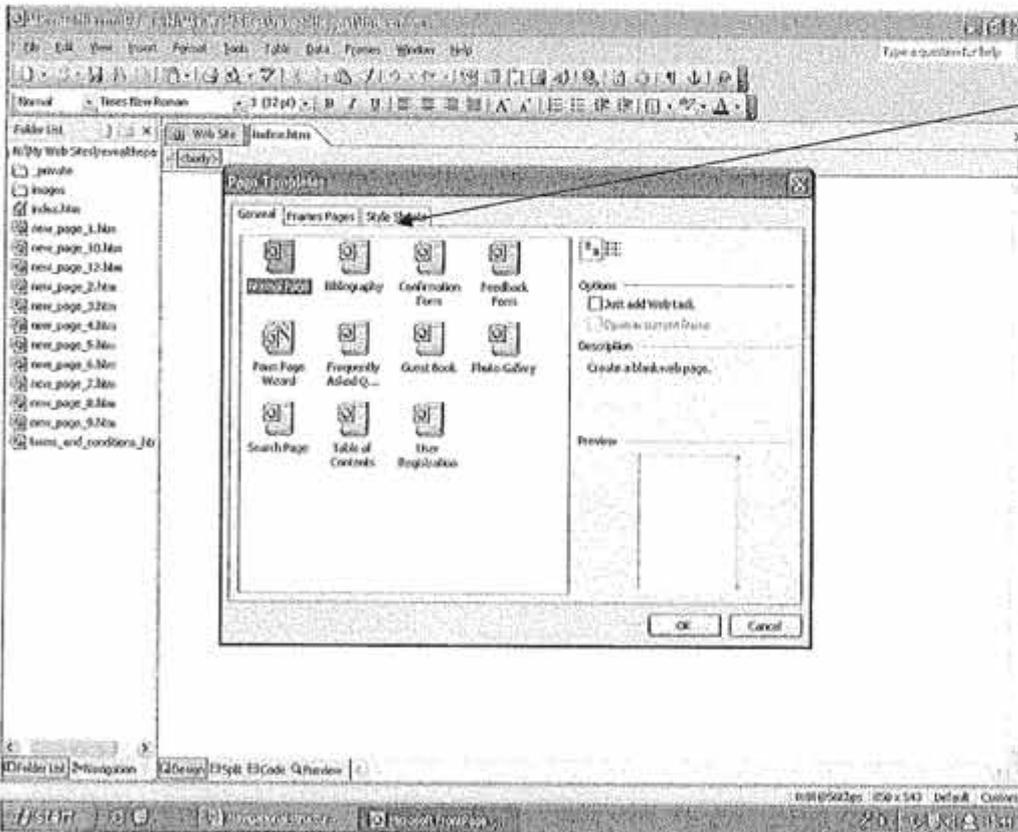

Task D

Cascading style sheet

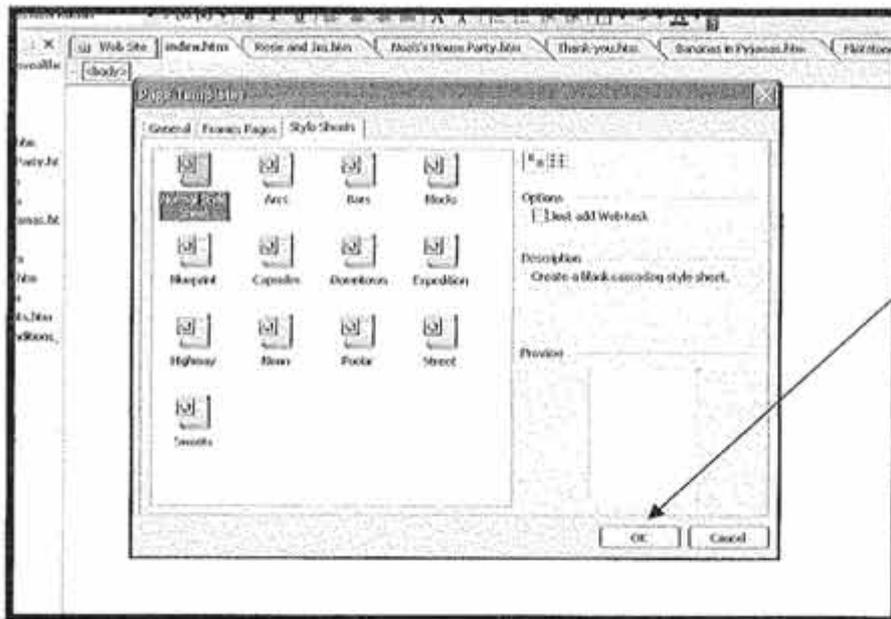

I clicked on the 'index page' and then I clicked the 'select page icon', and I clicked 'page'.

The following menu appeared when I clicked page.

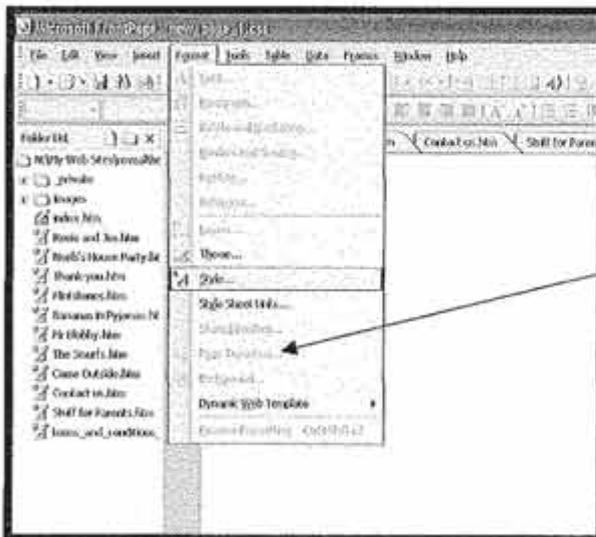

I clicked 'style sheet'

When I clicked style sheet the following menu appeared.

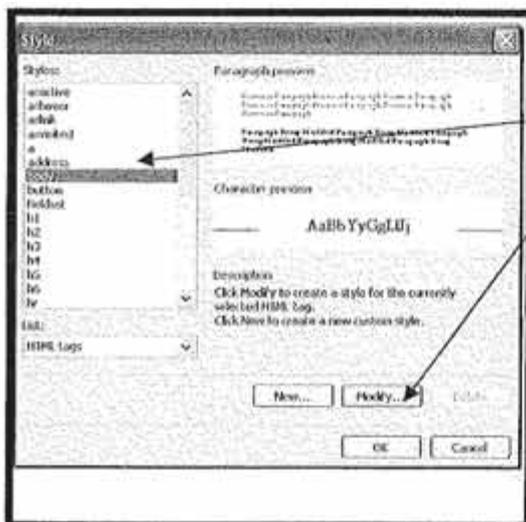

I clicked 'normal style sheet' and clicked ok

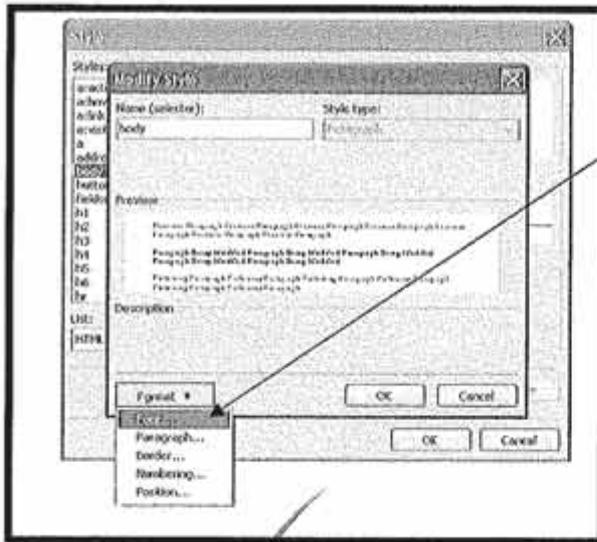

A blank page then appeared. I then clicked 'Format' then 'Style'

The following menu then appeared.

I clicked 'Body' then 'Modify'

When I clicked modify the following screen appeared.

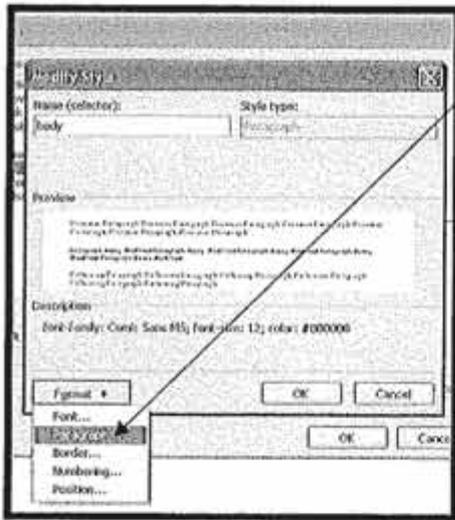

I clicked 'Format' then 'Font'

When I clicked 'Font' the next menu appeared.

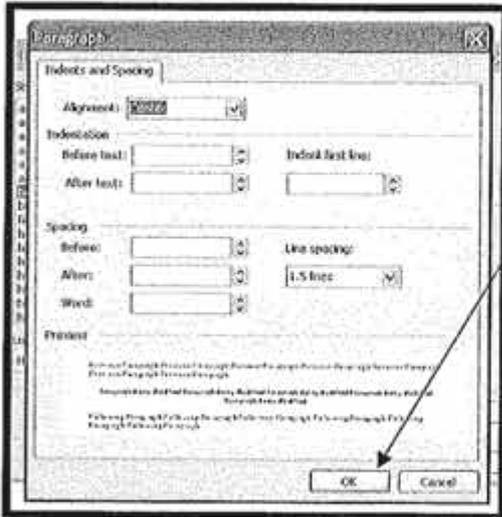

I picked the font I wanted my text to be, the colour, the style and size. I then clicked 'OK'

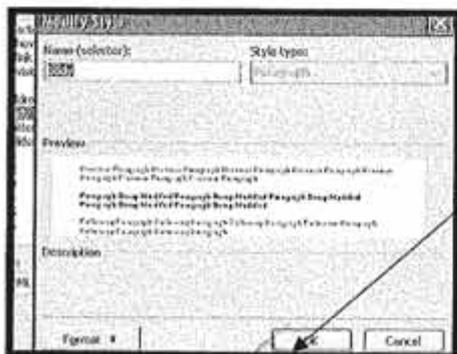

I clicked 'Paragraph'

When I clicked 'paragraph' the following menu appeared.

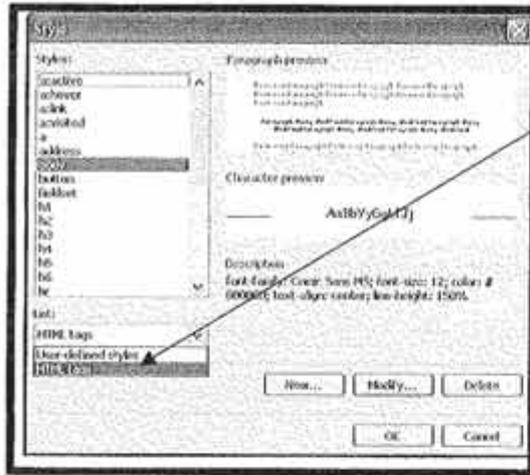

I changed the alignment to 'centre' and changed the alignment to '1.5'. I then clicked 'OK'.

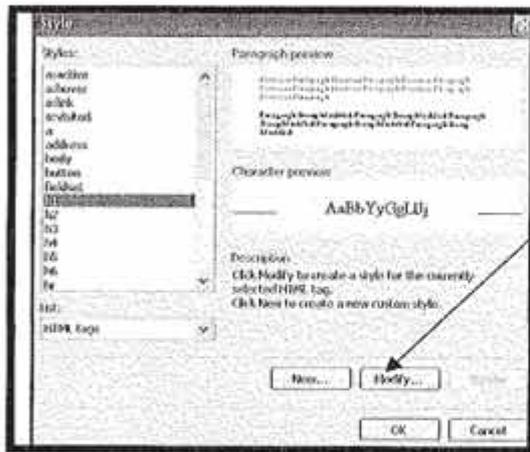

When I clicked 'OK' the screen to the left appeared and I then clicked 'OK'.

When I had finished changing the body text I decided to change the first heading.

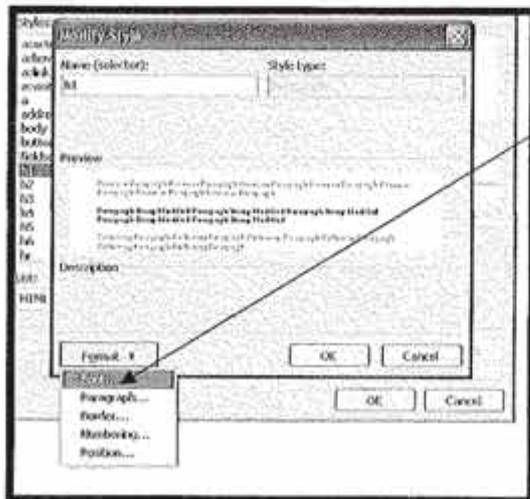

I changed the 'list' box to 'HTML tags'

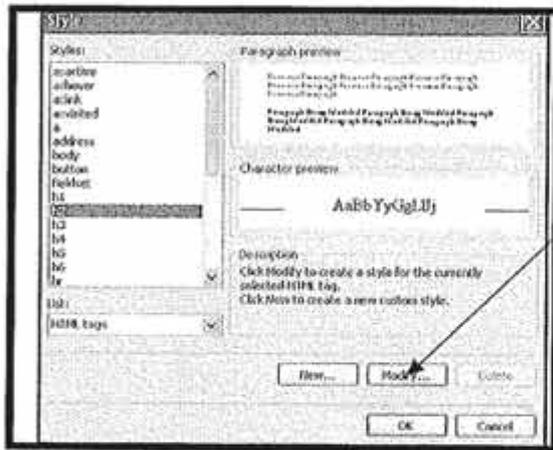

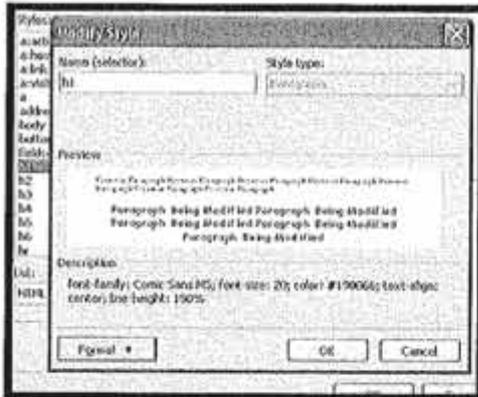

I clicked 'h1' in the style box and then clicked 'Modify'

When I clicked 'Modify' the following menu appeared.

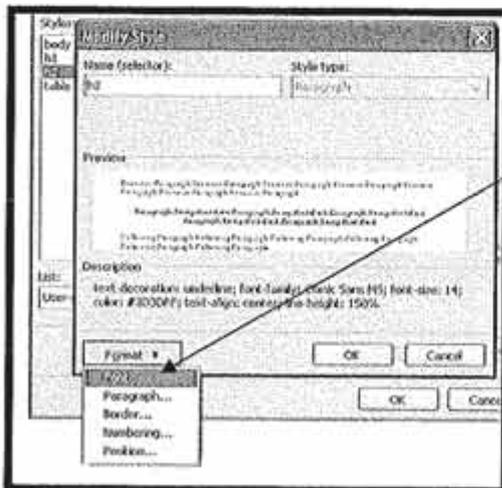

I selected 'Font'

When I clicked 'OK' the following screen appeared. I selected 'OK' in this menu as well.

When I had finish with 'H1' I selected 'h2' from the 'Style' box and clicked 'Modify'.

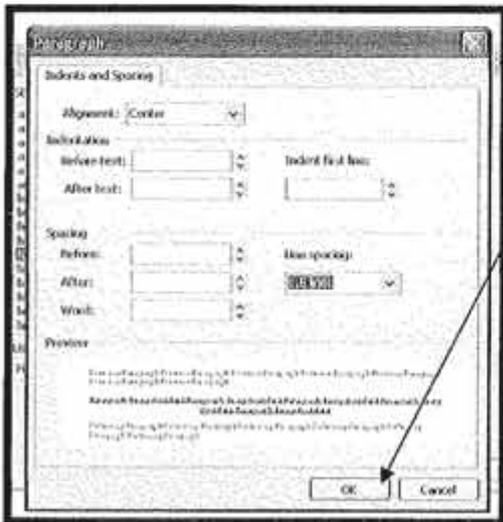

I selected 'Font'

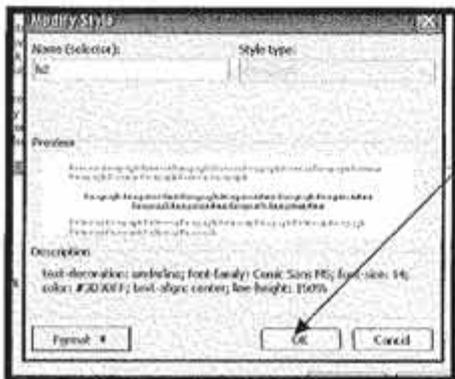

I picked the font, font style, size colour and effect I wanted. I then selected 'OK'

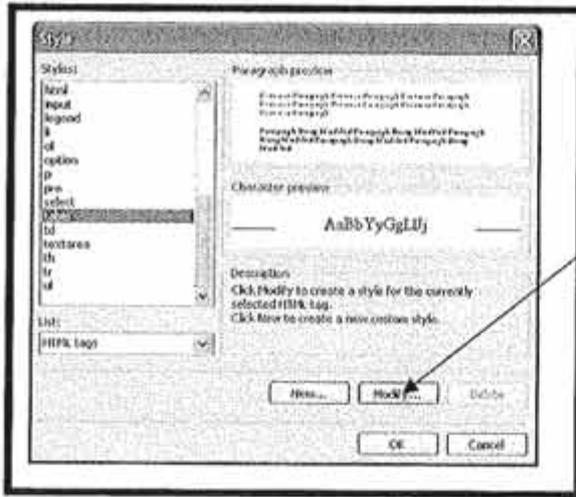

I selected 'Paragraph'

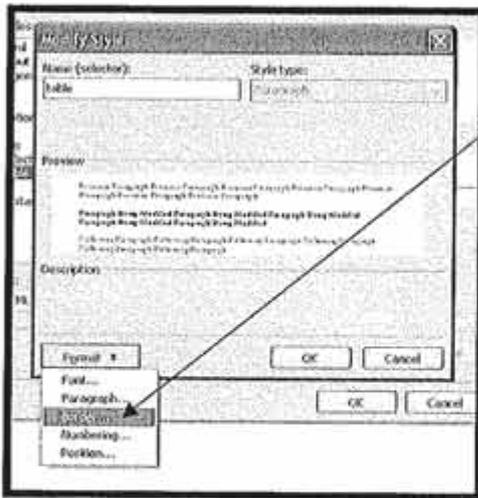

I changed the 'Alignment' to centre and the 'Line Spacing' to 1.5. I then clicked 'Ok'

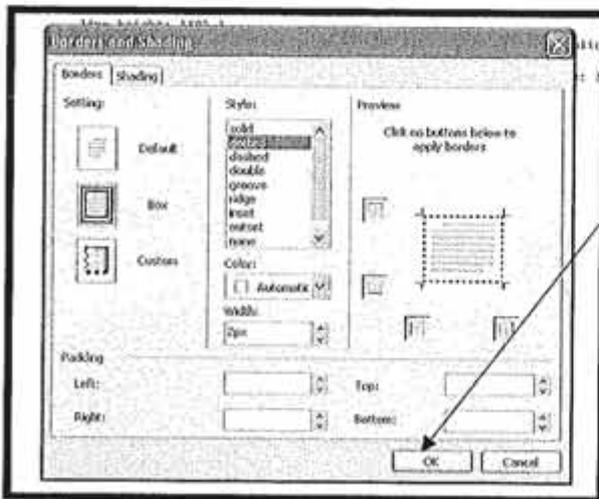

I clicked 'Ok' when I had finished with 'Paragraph'

I selected 'Table'
out of the 'style' box
I then selected
'Modify'

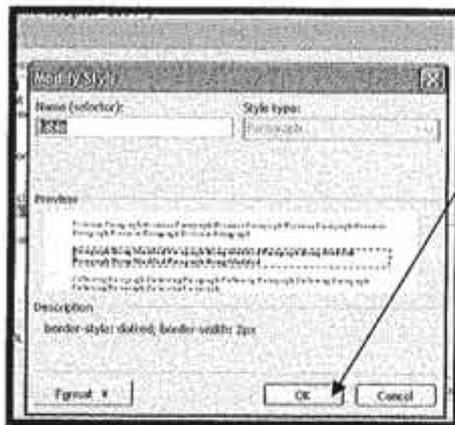

I selected 'Border'

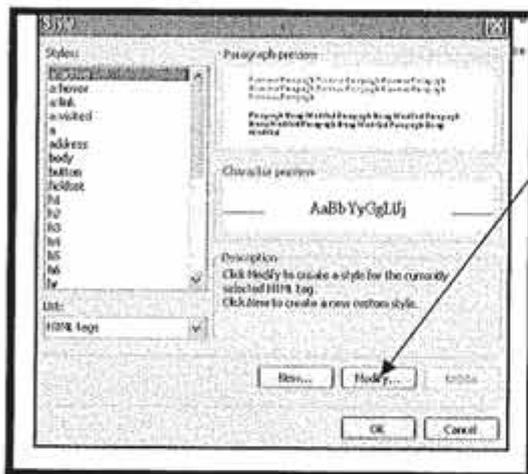

I changed the 'Style' to
dotted and didn't change
the colour to anything. I
then selected 'OK'

The following printscreen appeared

I clicked
'OK'

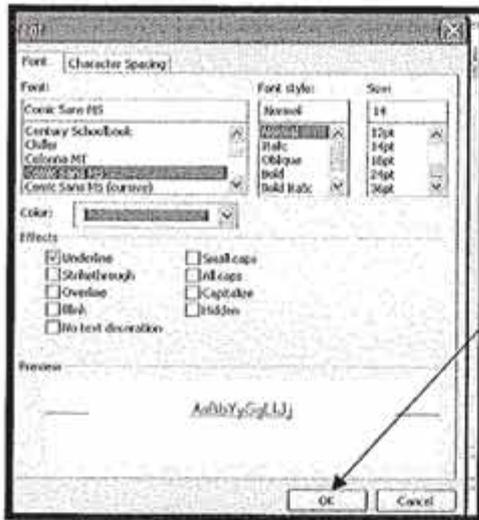

When I had finish
with 'table' I
selected 'a: active'
then clicked
'Modify'

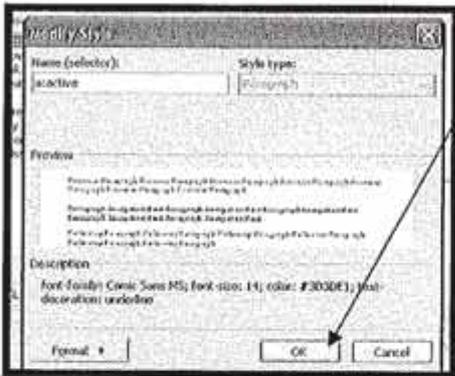

The following printscreen then appeared.

I selected
'Font'

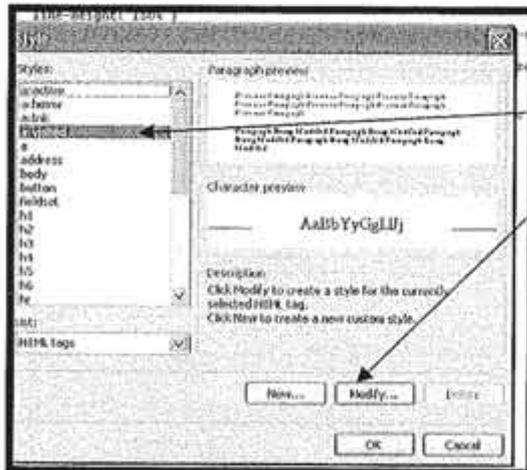

I changed the font to the font I wanted and changed the style, size and colour. I then clicked 'OK'

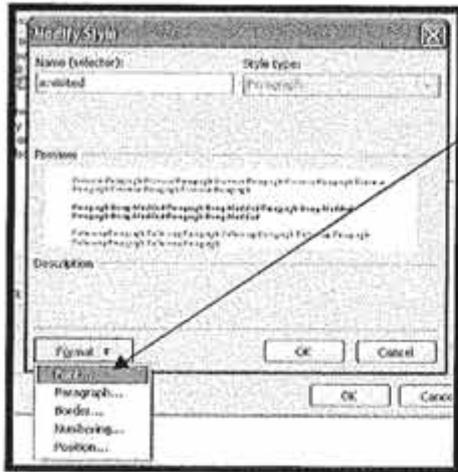

I clicked 'OK' again.

When I clicked 'OK' the following menu appeared.

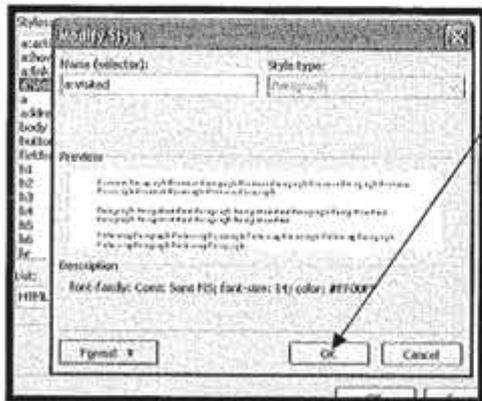

When I had finish changing 'a: active' I then selected 'a: visited' and clicked 'Modify'

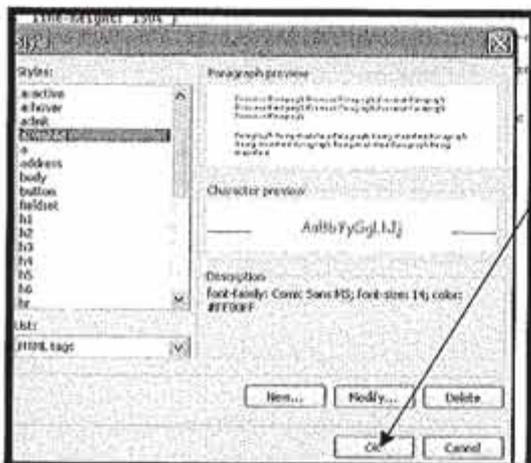

I selected 'Format' then 'Font'

I changed the font, style, size and colour and clicked 'OK'

I selected 'OK'

I selected 'OK'

The coding appeared like below. ✓

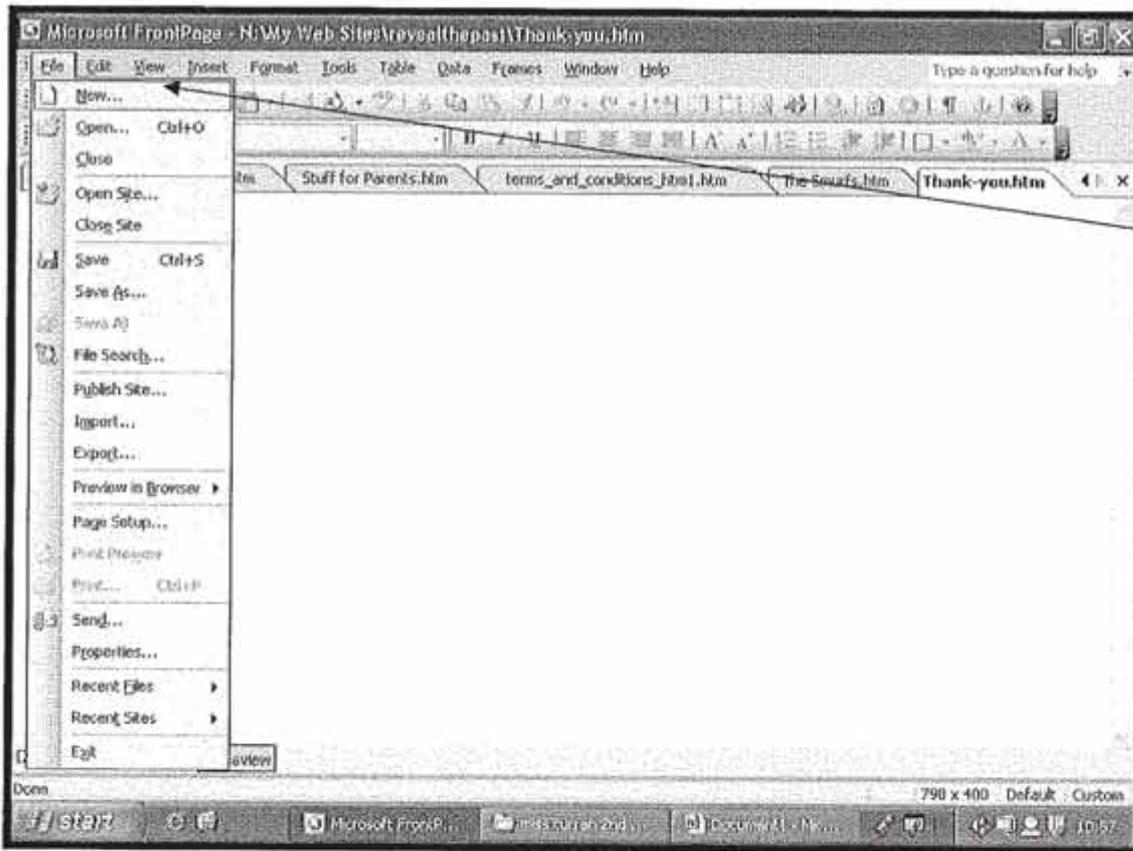

```
HTML
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=windows-1252">
<title>Business In Pyjamas.htm</title>
<meta name="GENERATOR" content="Microsoft FrontPage 6.0">
<meta name="ProgID" content="FrontPage.Editor.Document">
<meta name="Microsoft Theme" content="none, default">
<meta name="Microsoft Border" content="none, default">
</head>
<body bgcolor="#000080">
</body>
</html>
```

I then copied the coding to my CSS sheet. ✓

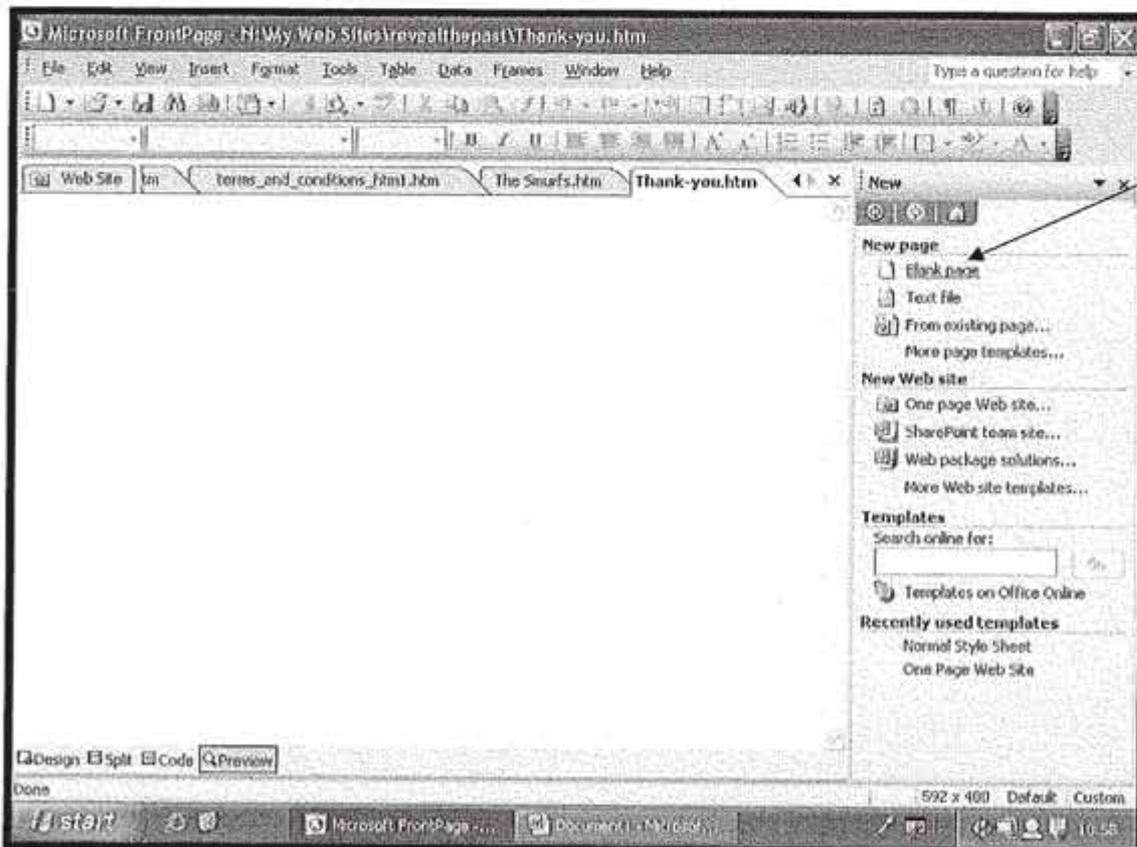

```
body { font-family: Comic Sans MS; font-size: 12; color: #000080; text-align: center; line-height: 150% }
h1 { font-family: Comic Sans MS; font-size: 20; color: #190056; text-align: center; line-height: 150% }
h2 { text-decoration: underline; font-family: Comic Sans MS; font-size: 14; color: #0000FF; text-align: center; line-height: 150% }
table { border-style: dotted; border-width: 2px }
Body { background-color: rgb(0,0,128) }
:inactive { font-family: Comic Sans MS; font-size: 14; color: #000080; text-decoration: underline }
:visited { font-family: Comic Sans MS; font-size: 14; color: #FF00FF }
```

I edited the coding for the CSS sheet ✓

Creating a template

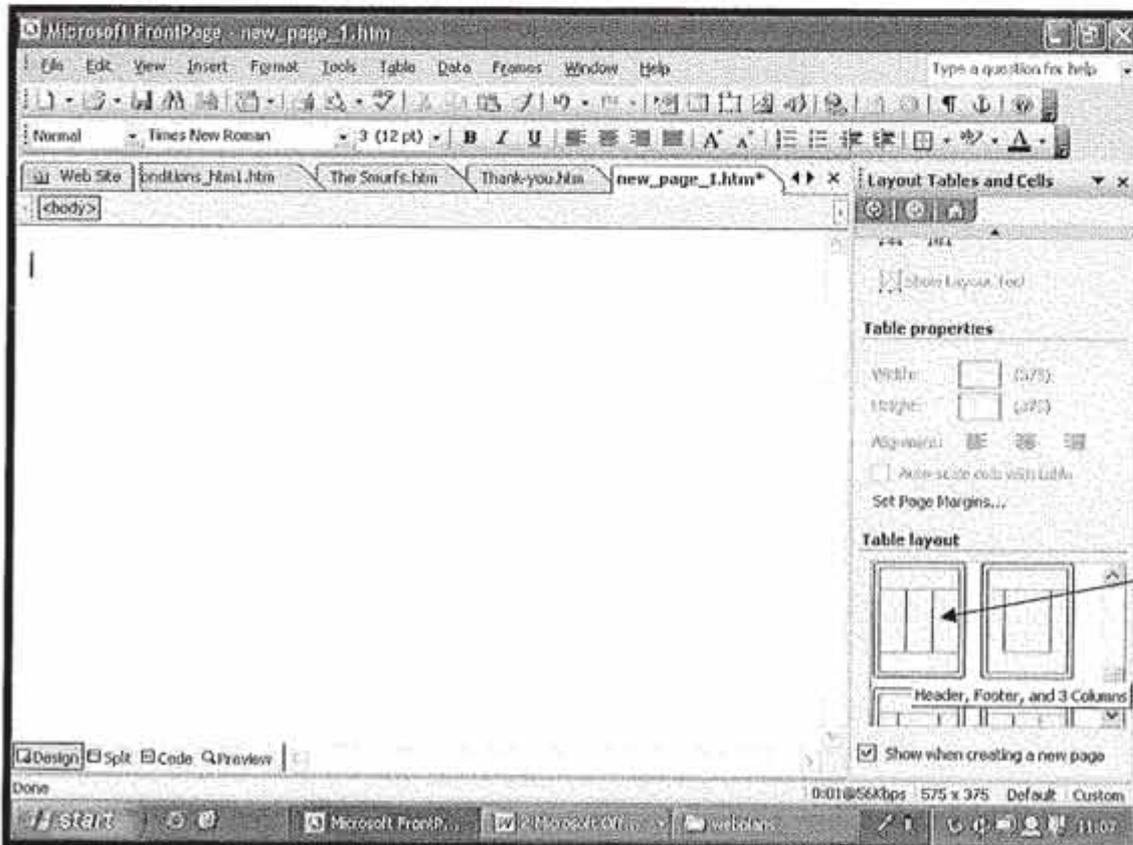

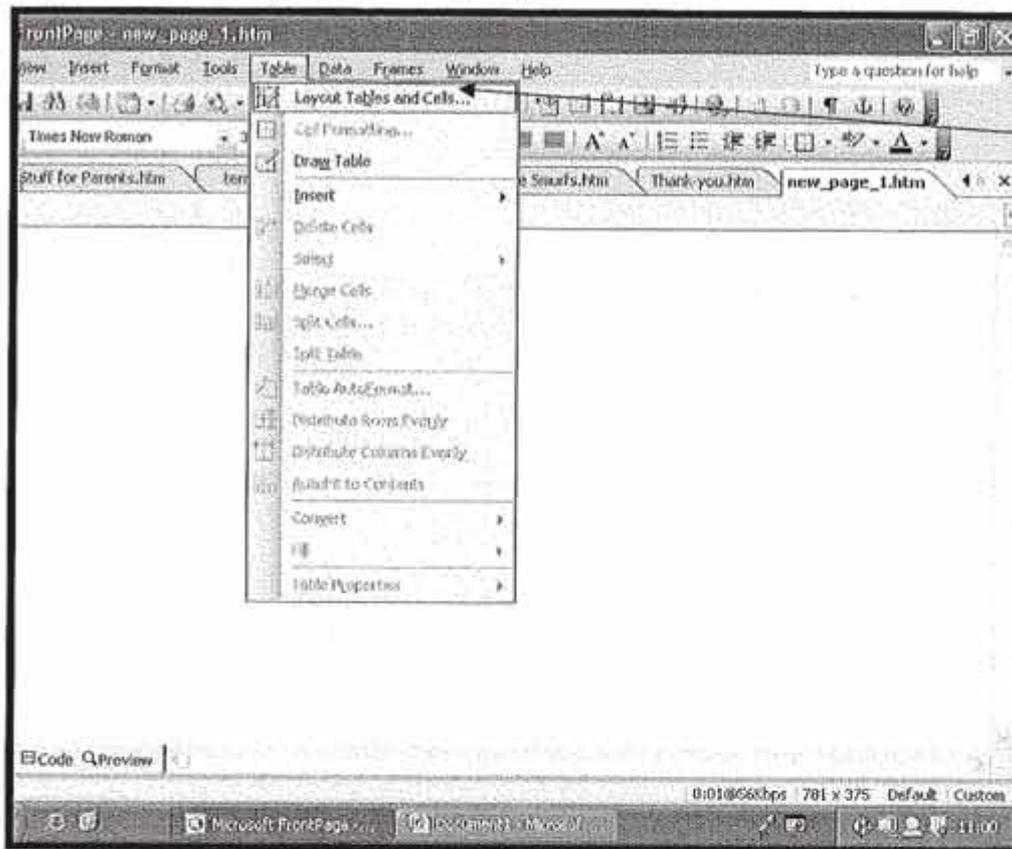

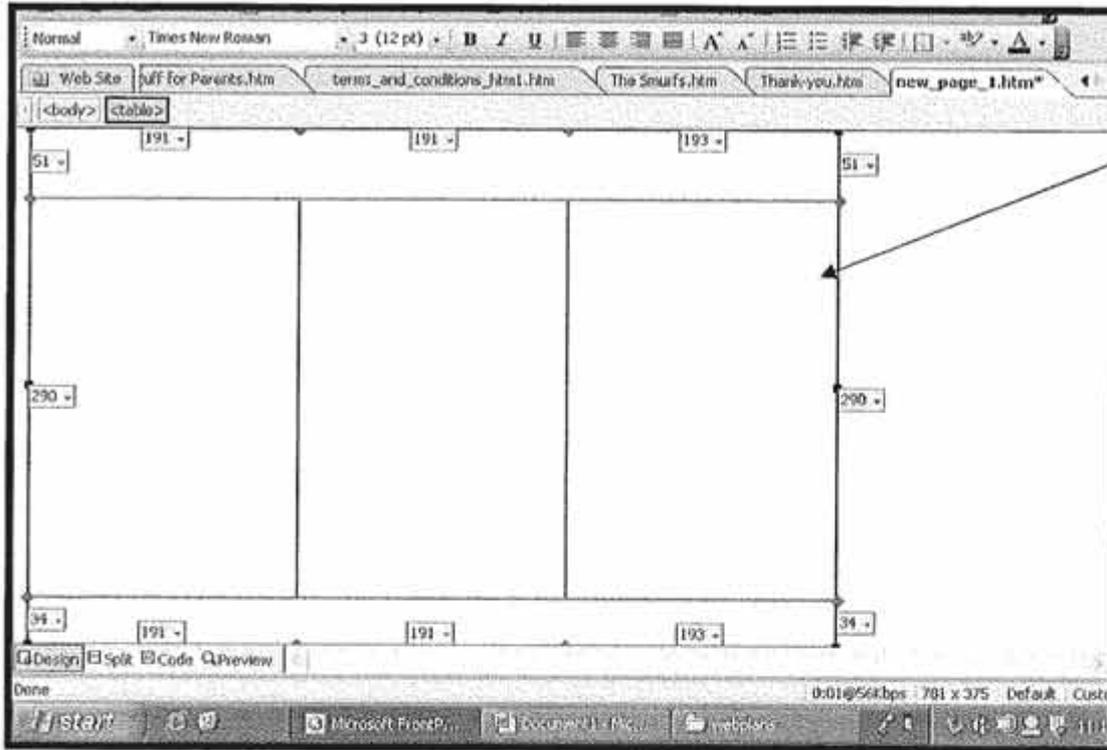

To insert a new page I clicked 'File' then 'New'

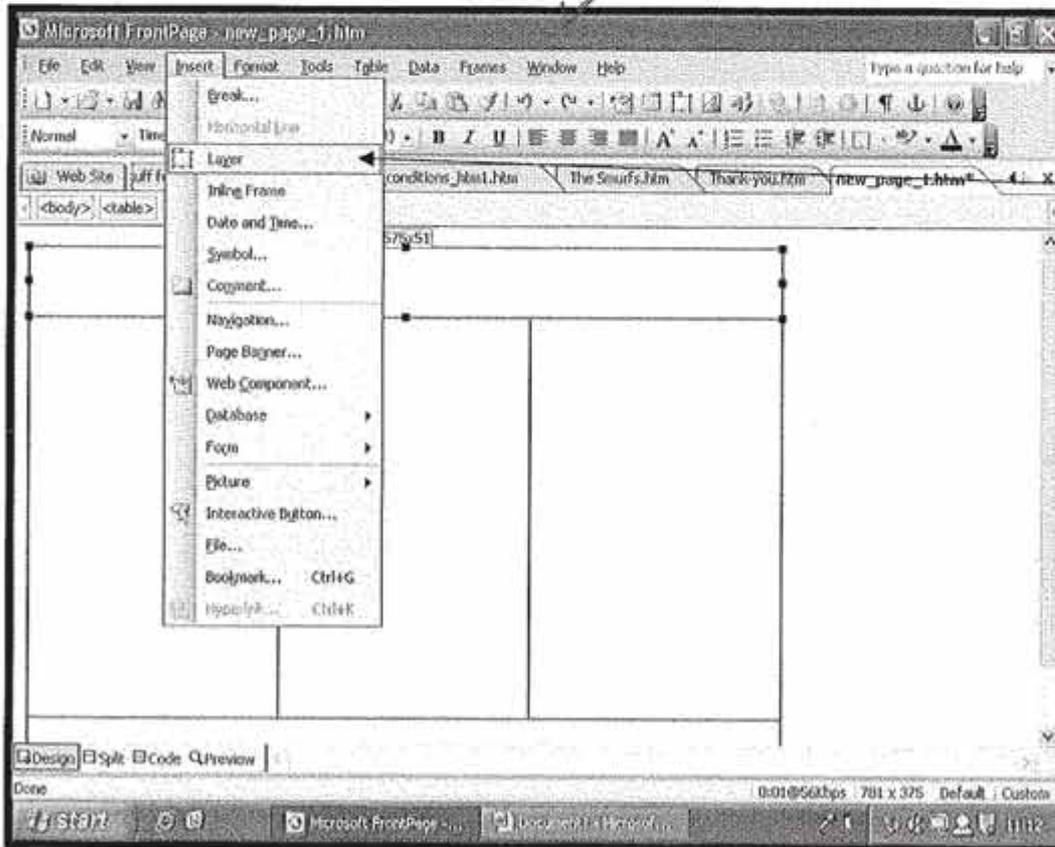

I selected 'Blank Page'

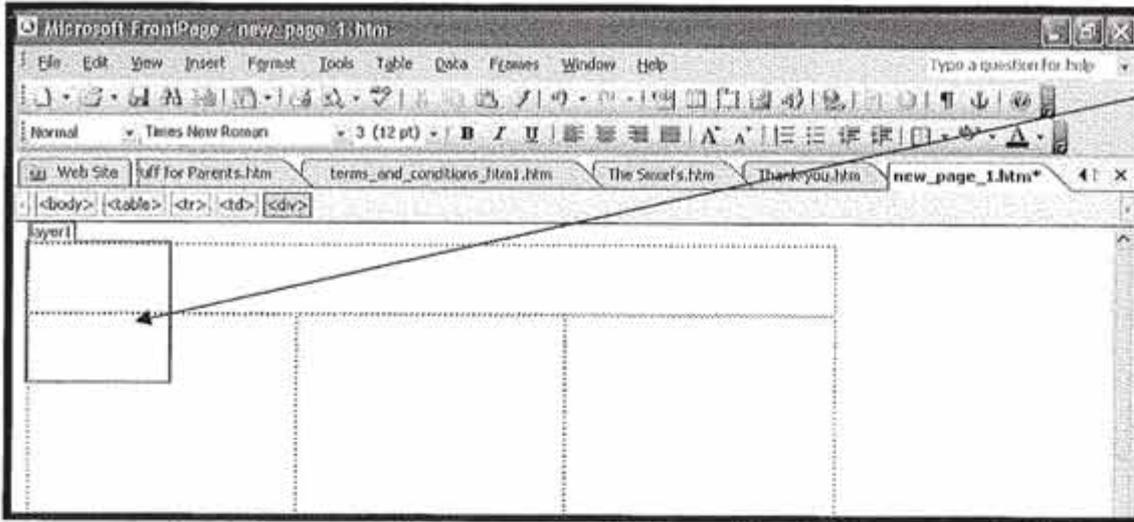

The new page then appeared like below.

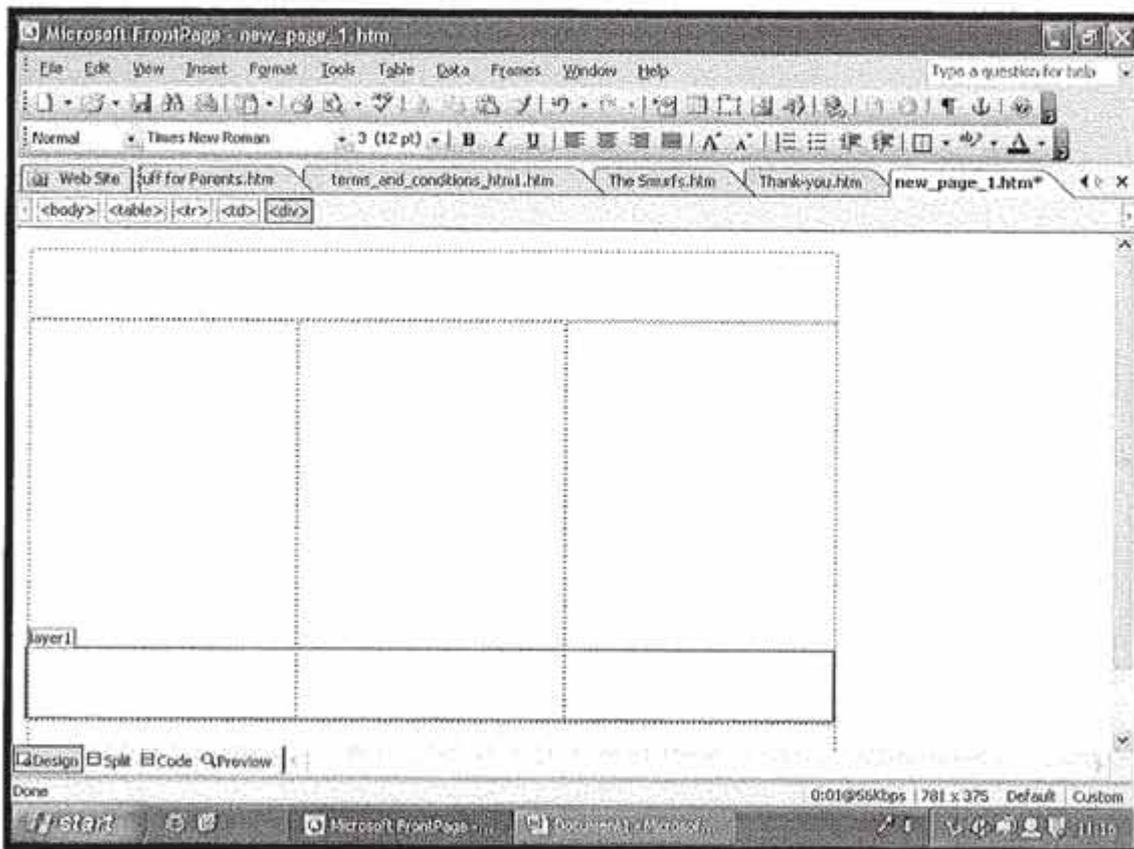

I had to adjust the template to the way I wanted it.

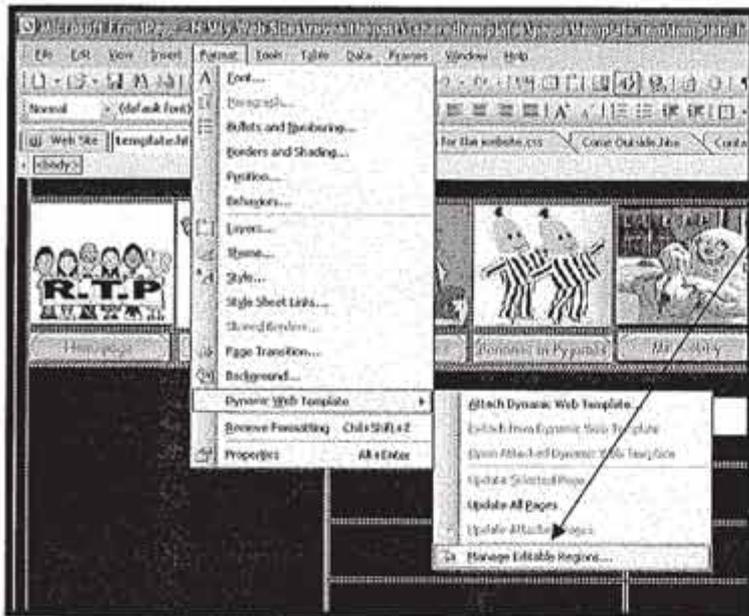

A blue box appeared at the top corner of the screen. I then clicked on it and dragged it to where I wanted it and made it bigger.

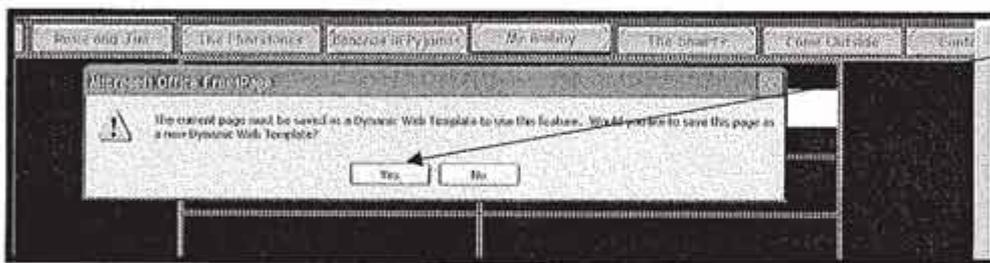

The layout appeared like below when I had finished moving it.

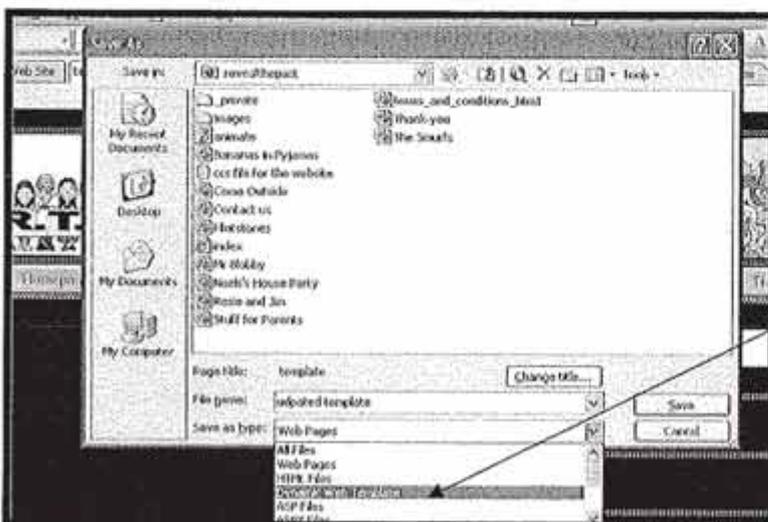

I then added all my consistencies to the template.

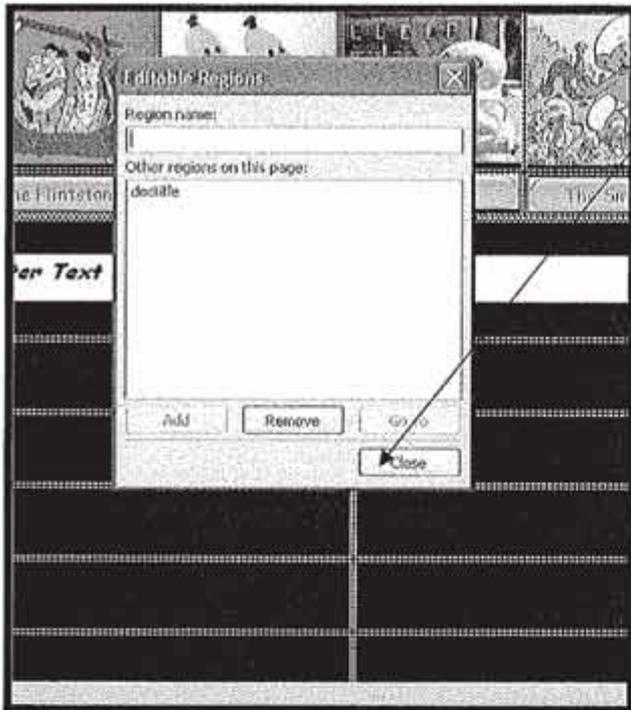

I selected 'Format', 'dynamic web template' then 'manage editable regions' ✓

I selected 'Yes' ✓

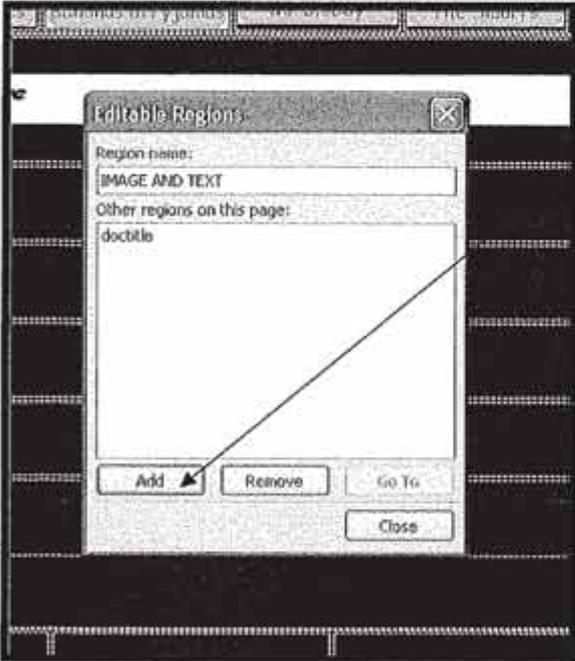

I named the template to 'updated template' and changed the save as type to dynamic web template and the selected 'Save' ✓

I then selected 'Close'

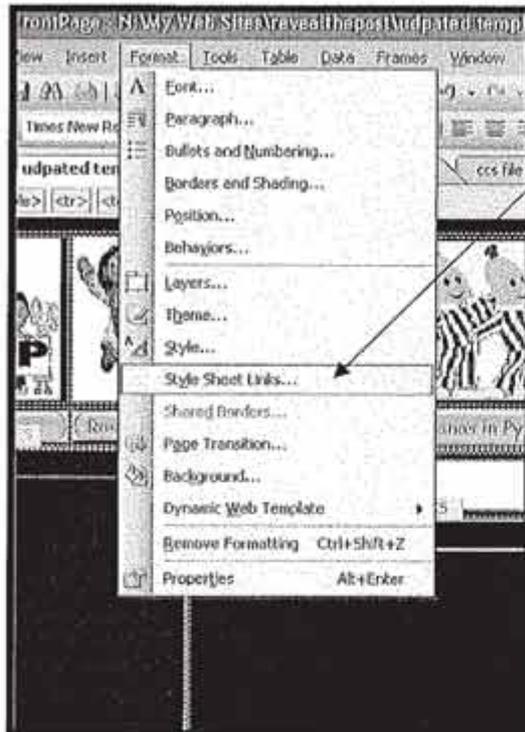

I then repeated these steps to reopen the window above.

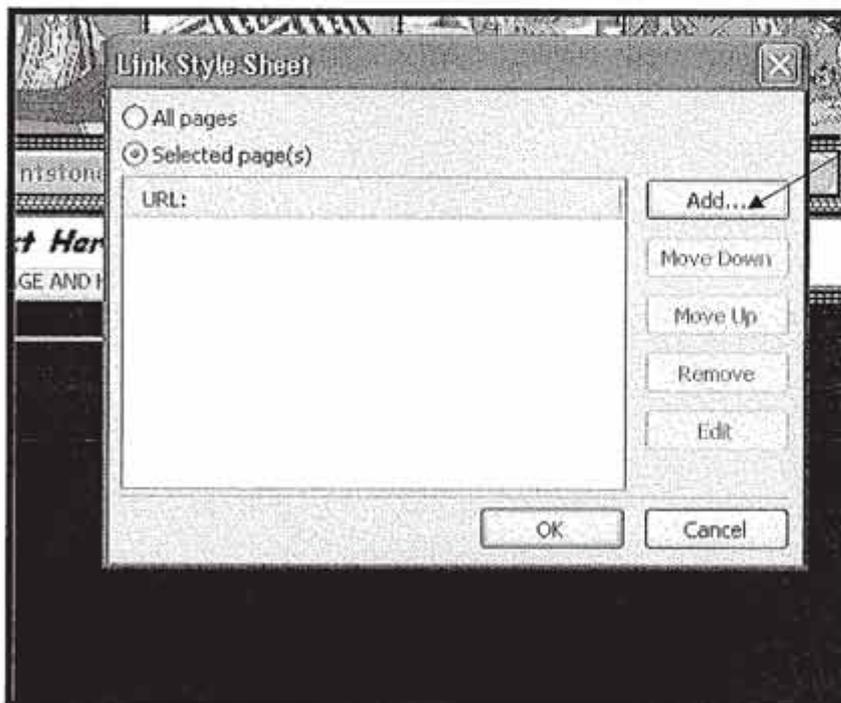

This show was I entered the region name, I then selected 'add'

I repeated the same steps for all the ✓ editable regions I wanted.

Adding CSS sheet

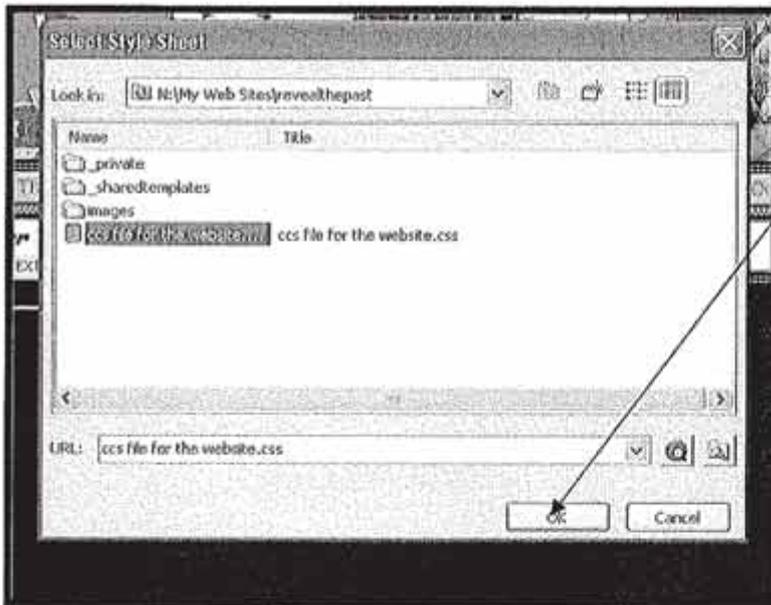

I selected 'Format' then 'style sheet Links' ✓

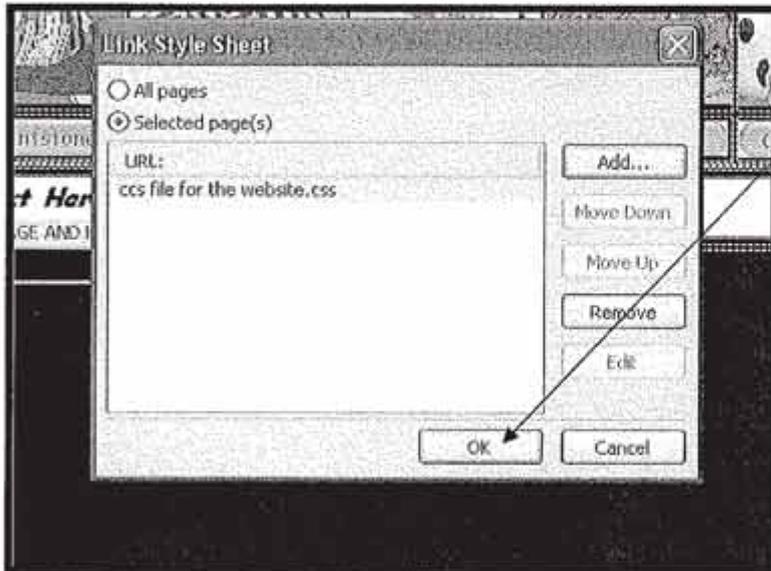

I made sure 'selected pages were chosen and then selected 'Add'

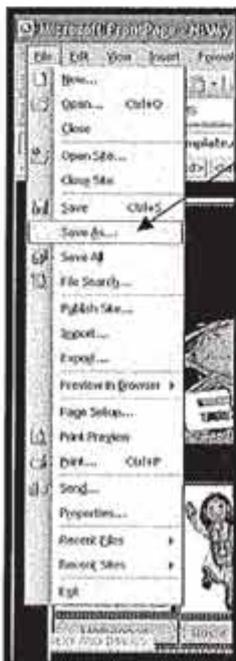

10/21

I selected my CSS sheet and then I selected 'OK'

I selected 'OK'

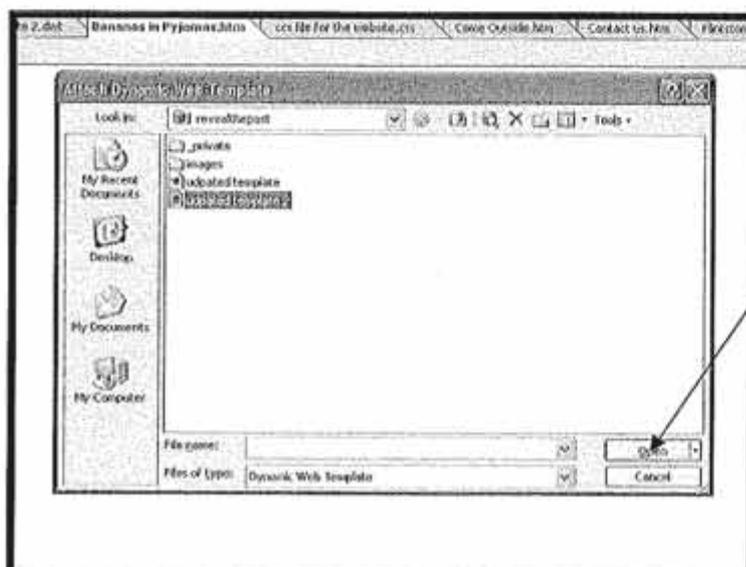

I selected 'File' then 'Save as'.

I typed updated template 2 into the 'File name'. I then selected 'save'

I clicked on the page I wanted to add the template 2. I then selected 'Format', 'Dynamic web template' then 'attach dynamic web template.'

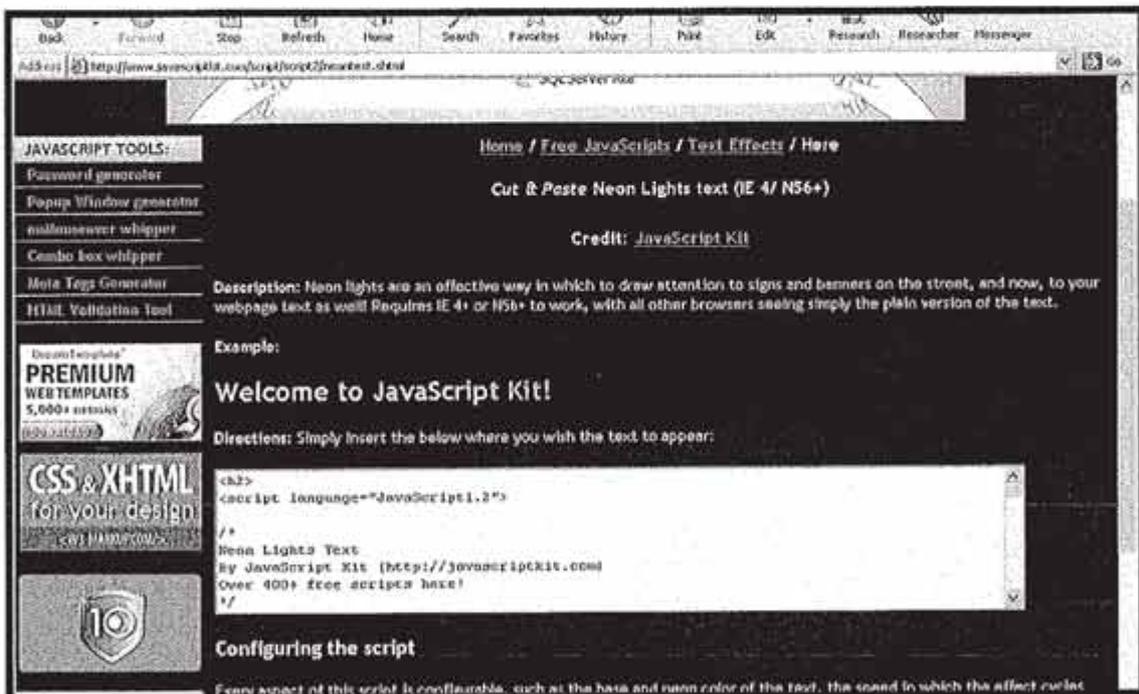

I selected the template I wanted and then selected 'open'. The template then attached to the page I wanted it to.

Task D

For this task I will show my understanding of HTML script commands by explaining a number of them. I will edit the HTML script commands to change the page layout and edit the HTML script commands so a comprehensive range of additional components are included in my website.

Neon Text

The feature I am going to copy is neon text. It is yellow and grey and flashes. It is very eye catching. I found this feature on JavaScript kit, I would like it in my website. Below is a printscreen of the neon text. I am going to copy and the past the coding and then edit it.

The screenshot shows a web browser window with the address bar displaying `http://www.javascripkit.com/script/script2/neontext.html`. The page content includes a navigation menu, a sidebar with various JavaScript tools, and a main content area. The main content area features a heading "Cut & Paste Neon Lights text (IE 4/ NS6+)", a description of the effect, an example of the text "Welcome to JavaScript Kit!", and a code block containing the JavaScript code for the neon text effect. The code is as follows:

```
<h2>
<script language="JavaScript1.2">
//
Neon Lights Text
By JavaScript Kit (http://javascriptkit.com)
Over 400+ free scripts here!
//
```

Below the code block, there is a section titled "Configuring the script" with a note: "Many aspect of this script is configurable, such as the base and main color of the text, the speed in which the effect curls."

V.....

Below is the original coding. I have highlighted the coding I am going to change and labelled it.

```
<h2>
```

```
<script language="JavaScript1.2">
```

```
/*
```

```
Neon Lights Text
```

```
By JavaScript Kit (http://javascriptkit.com)
```

```
Over 400+ free scripts here!
```

```
*/
```

```
var message="Welcome to JavaScript Kit!"
```

I am going to change the
Welcome to JavaScript
kit to stuff for parents.

```
var neonbasecolor="gray"
```

```
var neontextcolor="yellow"
```

I am going to change
the gray and yellow to
pink and white

```
var flashspeed=100 //in milliseconds
```

```
///No need to edit below this line/////
```

```
var n=0
```

```
if (document.all||document.getElementById){
```

```
document.write('')
```

```
for (m=0;m<message.length;m++)
```

```
document.write('<span
```

```
id="neonlight'+m+'">'+message.charAt(m)+'</span>')
```

```
document.write('')
```

```
}
```

```
else
```

```
document.write(message)
```

```
function crossref(number){
```

```

var crossobj=document.all? eval("document.all.neonlight"+number) :
document.getElementById("neonlight"+number)
return crossobj
}
function neon(){
//Change all letters to base color
if (n==0){
for (m=0;m<message.length;m++)
//eval("document.all.neonlight"+m).style.color=neonbasecolor
crossref(m).style.color=neonbasecolor
}
//cycle through and change individual letters to neon color
crossref(n).style.color=neontextcolor
if (n<message.length-1)
n++
else{
n=0
clearInterval(flashing)
setTimeout("beginneon()",1500)
return
}
}
function beginneon(){
if (document.all||document.getElementById)
flashing=setInterval("neon()",flashspeed)
}
beginneon()
</script>

```

```
</h2>
```

```
<p align="center">This free script provided by<br />
```

```
<a href="http://javascriptkit.com">JavaScript Kit</a></p>
```

The following is my new coding. I have highlighted and labelled what I changed.

```
<h2>
```

```
<script language="JavaScript1.2">
```

```
/*
```

```
Neon Lights Text
```

```
By JavaScript Kit (http://javascriptkit.com)
```

```
Over 400+ free scripts here!
```

```
*/
```

```
var message="Stuff for parents"  
var neonbasecolor="white"  
var neontextcolor="Pink"  
var flashspeed=100 //in milliseconds
```

I changed the coding to suit my website

changes have clearly been made

```
///No need to edit below this line/////
```

```
var n=0
```

```
if (document.all||document.getElementById){
```

```
document.write('')
```

```
for (m=0;m<message.length;m++)
```

```
document.write('<span
```

```
id="neonlight'+m+'">'+message.charAt(m)+'</span>')
```

```
document.write('')
```

```
}
```

```
else
```

```
document.write(message)
```

```
function crossref(number){
```

```
var crossobj=document.all? eval("document.all.neonlight"+number) :
```

```
document.getElementById("neonlight"+number)
```

```
return crossobj
```

```

}

function neon(){

//Change all letters to base color
if (n==0){
for (m=0;m<message.length;m++)
//eval("document.all.neonlight"+m).style.color=neonbasecolor
crossref(m).style.color=neonbasecolor
}

//cycle through and change individual letters to neon color
crossref(n).style.color=neontextcolor

if (n<message.length-1)
n++
else{
n=0
clearInterval(flashing)
setTimeout("beginneon()",1500)
return
}
}

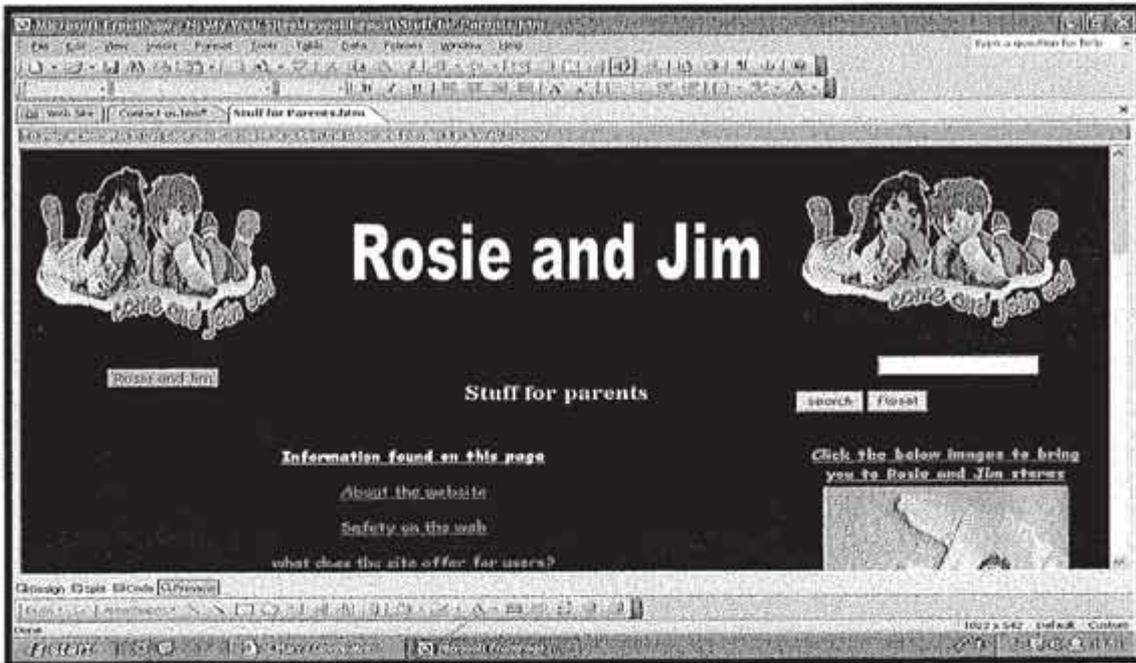

function beginneon(){
if (document.all||document.getElementById)
flashing=setInterval("neon()",flashspeed)
}
beginneon()

</script>
</h2>

<p align="center">This free script provided by<br />
<a href="http://javascriptkit.com">JavaScript Kit</a></p>

```

The following is a printscreen of the neon text in my website.

✓ Feature included

Rainbow text

The feature I am going to copy is rainbow text. It is multicoloured flashed writing that stands out and is eye-catching. I found this feature of JavaScript kit I am going to use it on my website. Below is a printscreen of the rainbow text. I am going to copy the coding and edit it.

Below is the coding of the original for the rainbow text. I have highlighted and labelled what I am going to change

<script>

/*

RAINBOW TEXT Script by / (c) 2002

Featured on JavaScript Kit

For this script, visit <http://www.javascriptkit.com>

*/

// ***** MAKE YOUR CHANGES HERE

var text="RAINBOW TEXT" // YOUR TEXT
var speed=80 // SPEED OF FADE

I will change this text

// ***** LEAVE THE NEXT BIT ALONE!

```
if (document.all||document.getElementById){
document.write('<span id="highlight">' + text + '</span>')
var storetext=document.getElementById?
document.getElementById("highlight") : document.all.highlight
}
else
document.write(text)
var hex=new
Array("00","14","28","3C","50","64","78","8C","A0","B4","C8","DC","F0")
var r=1
var g=1
var b=1
var seq=1
function changetext(){
rainbow="#" + hex[r] + hex[g] + hex[b]
storetext.style.color=rainbow
}
function change(){
if (seq==6){
```

```
b--
if (b==0)
seq=1
}
if (seq==5){
r++
if (r==12)
seq=6
}
if (seq==4){
g--
if (g==0)
seq=5
}
if (seq==3){
b++
if (b==12)
seq=4
}
if (seq==2){
r--
if (r==0)
seq=3
}
if (seq==1){
g++
if (g==12)
seq=2
}
changetext()
}
function starteffect(){
if (document.all||document.getElementById)
flash=setInterval("change()",speed)
}
starteffect()
</script>
</b>
```

`<p align="center">This free script provided by
JavaScript Kit</p>`

The following coding is my new coding. I have highlighted the text I changed and labelled it.

<script>

```
/*  
RAINBOW TEXT Script by [redacted] (c) 2002  
Featured on JavaScript Kit  
For this script, visit http://www.javascriptkit.com  
*/
```

```
// ***** MAKE YOUR CHANGES HERE
```

```
var text="How can I help You?" // YOUR TEXT  
var speed=80 // SPEED OF FADE
```

I changed the text to
'how can I help
you?'

```
// ***** LEAVE THE NEXT BIT ALONE!
```

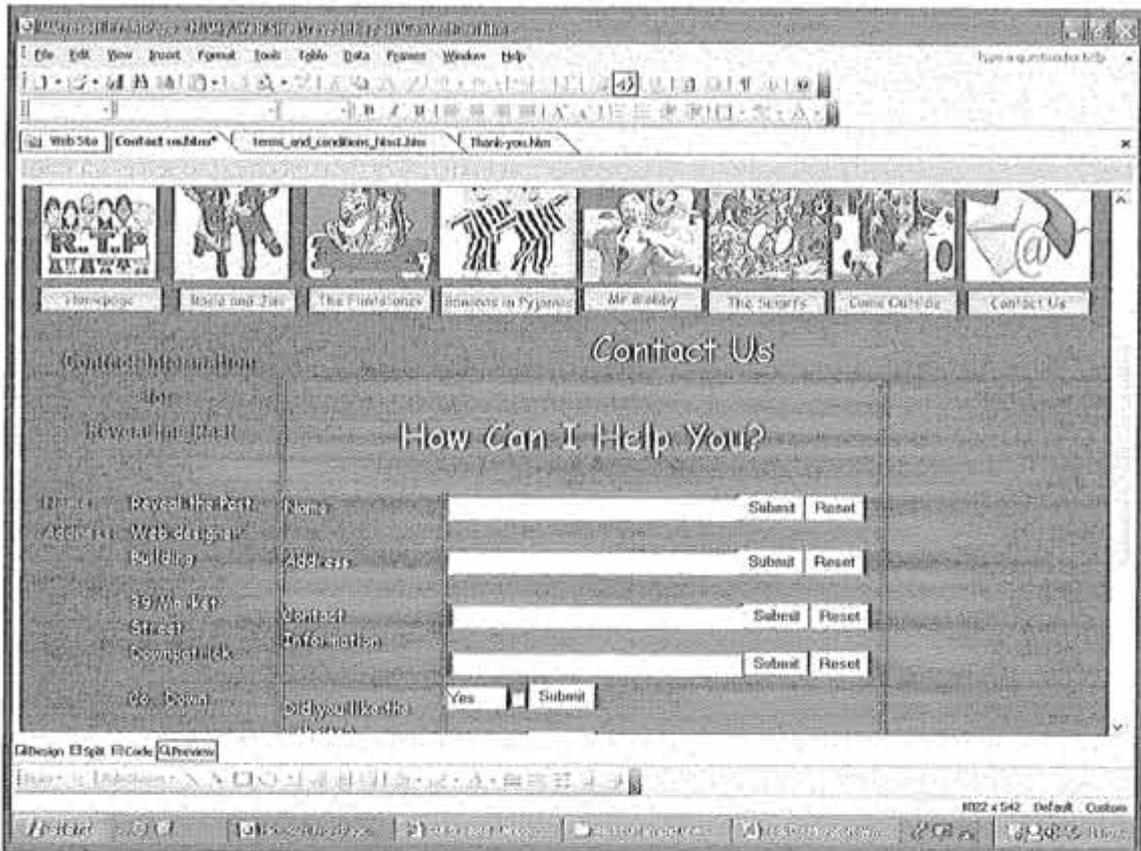

HTML script command
has been added and
inserted clearly
which changes make

```
if (document.all||document.getElementById){  
document.write('<span id="highlight">' + text + '</span>')  
var storetext=document.getElementById?  
document.getElementById("highlight") : document.all.highlight  
}  
else  
document.write(text)  
var hex=new  
Array("00","14","28","3C","50","64","78","8C","A0","B4","C8","DC","F0")  
var r=1  
var g=1  
var b=1  
var seq=1  
function changetext(){  
rainbow="#" + hex[r] + hex[g] + hex[b]  
storetext.style.color=rainbow  
}  
function change(){  
if (seq==6){
```

```
b--
if (b==0)
seq=1
}
if (seq==5){

if (b==12)
seq=4
}
if (seq==2){
r--
if (r==0)
seq=3
}
if (seq==1){
g++
if (g==12)
seq=2
}
changetext()
}
function starteffect(){
if (document.all||document.getElementById)
flash=setInterval("change()",speed)
}
starteffect()
</script>
</b>
```

`<p align="center">This free script provided by
JavaScript Kit</p>`

The following printscreen shows the rainbow text insert in my website.

Feature included in website

Slide in image

The feature is of a bat; it slides in from the right and stays in the middle. It looks professional and stands out. I found this feature on quackit. I am going to use it in my website. Below is a printscreen of the image. I am going to copy the coding and edit it.

Below is the original coding. I have highlighted the coding I am going to change.

```
<marquee behavior="slide" direction="left">img  
src="http://www.quackit.com/pix/web_graphics/free_website_graphics/  
clip_arts/bats_013.gif" width="125" height="82" alt="Flying Bat"  
</marquee>
```

I am going to change this coding so that I can insert a different image.

Below is my coding after I changed it. I have highlighted my changes.

```
<marquee behavior="slide" direction="left">img border="0"  
src="images/new_page_2_files/image001.gif" width="328"  
height="151"</marquee>
```

I changed the highlighted text to a different image.

Again changes have been made to the coding and component has been included in the website

The following printscreen is of the slide in image when I changed the coding. It is inserted in my website.

Image scrolling down

This feature is an image of a bee that scrolls from the top of the page down. It stands out and is very attractive. I found this feature on quackit
I am going to use this feature in my website, to do this I will copy the coding and edit it.

Below is the original coding for the feature. I have highlighted what I am going to change.

```
<marquee behavior="scroll" direction="down"></marquee>
```

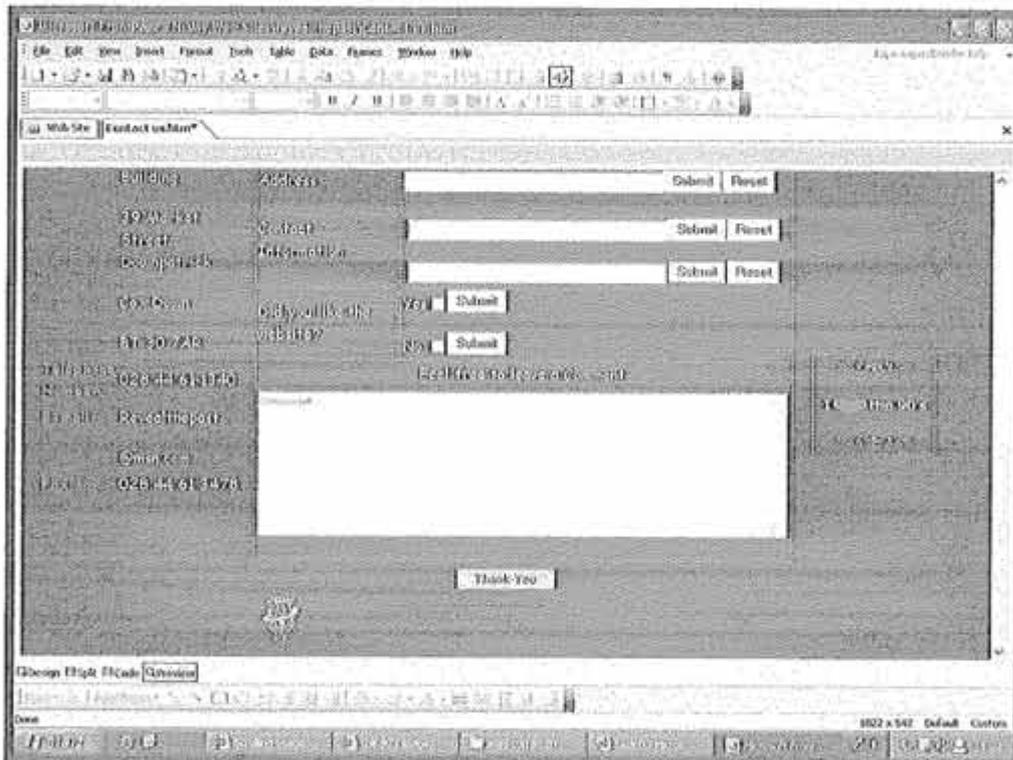

I am going to change this coding so I can change the image.

The following is the new coding for the scrolling down image feature.

The highlighted text is the coding I changed.

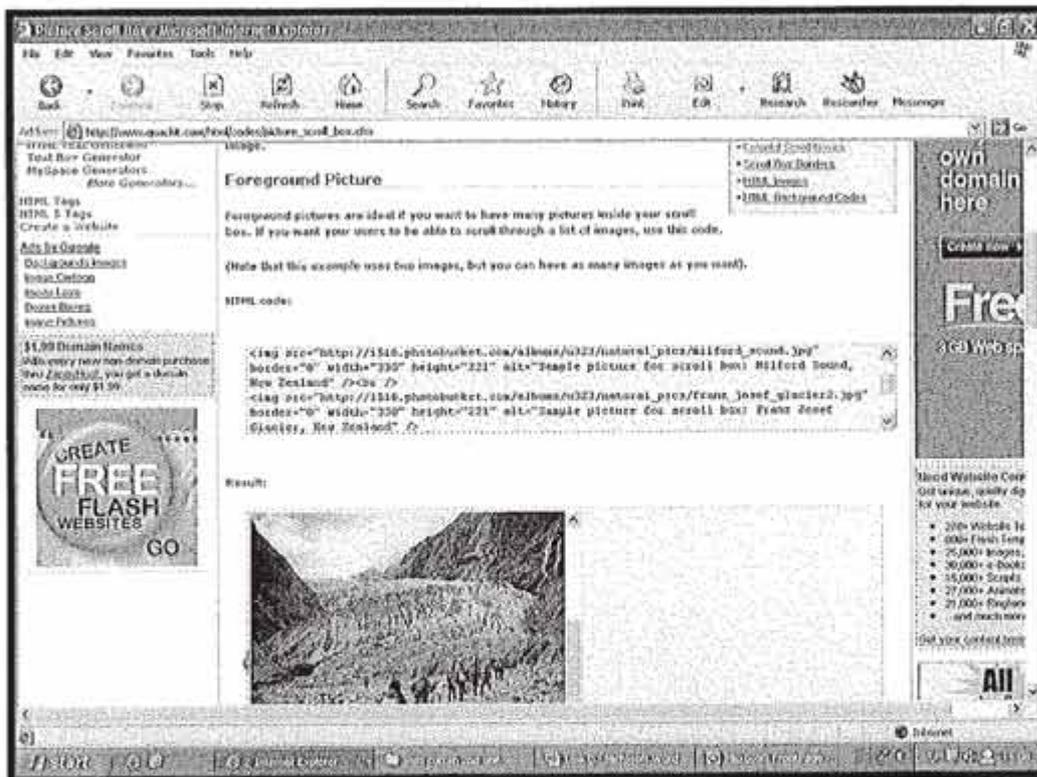

```
<marquee behavior="scroll" direction="down"></marquee>
```

The printscreen below shows the image inserted on my website.

Foreground Image

This feature is of an image scroller that can be moved down and across. It makes it quicker to flick through the picture. It stands out and is user friendly. I found this feature on quackit. I would like to use this feature on my website. To do this will copy the coding and edit it. The following printscreen shows a printscreen of the feature I want to use.

The following text shows the original coding I want to edit.

I am going to change the coding so that I can insert different images.

```
<div style="height:221px;width:330px;overflow:scroll;">
<br />

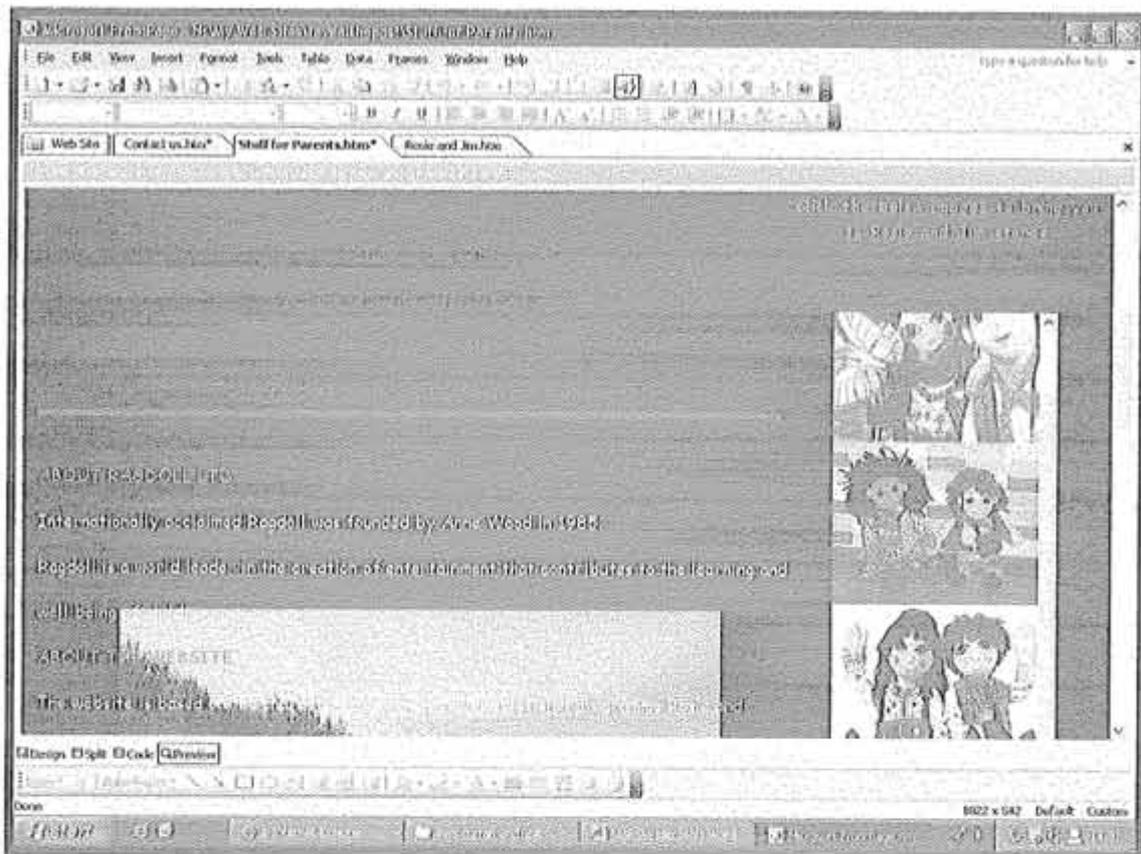

</div>
<p style="font-family:verdana,arial,sans-serif;font-size:10px;"><a href="http://www.quackit.com/html/codes/">HTML Codes</a></p>
```

The highlighted text shows the coding of my new images.

The following is my new coding when I changed it.

```
<div style="height:221px;width:330px;overflow:scroll;"> div<p
style="font-family:verdana,arial,sans-serif;font-size:10px;"><a href="http://www.quackit.com/html/codes/">HTML Codes</a></p>
```

The following printscreen shows the image stroller when it was inserted in my website. ✓

Task E

Testing

Screen sizes

In order to test the website I had to view the website on different screen sizes which were:

- C2K- HP computer 19" screen
- C2K- RM computer 17" screen
- ✓ • C2K- Laptop 15" screen

From viewing the website on the above screens I found out that the website uploaded successfully and the size auto adjusted to the screen automatically.

Browsers

Another thing I had to test to see if my website was working was to see if it would upload using different browsers. The browsers I used were:

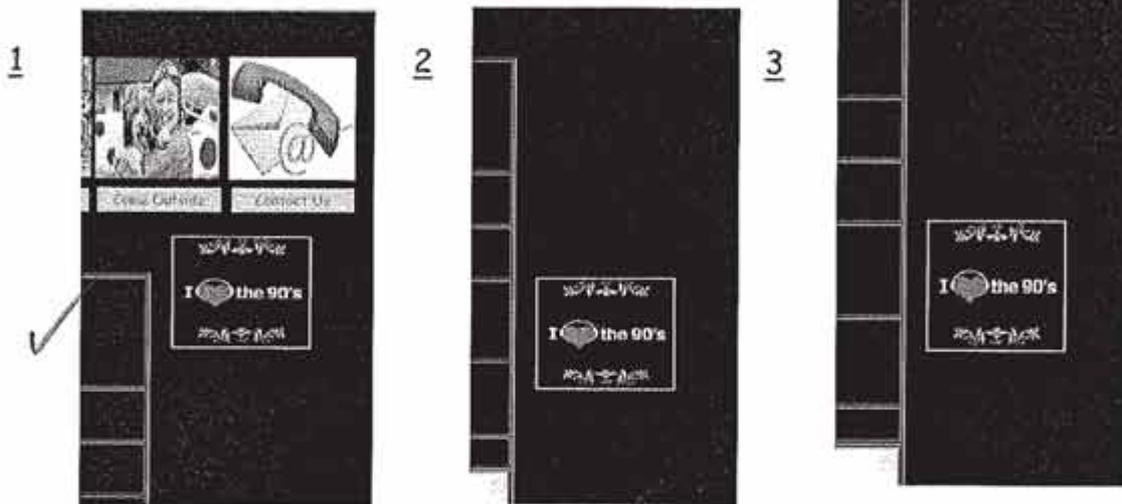

- Internet explorer 6.0 in school
- Internet explorer 8.0 at home

I uploaded the website on both browsers and I found out that it uploaded successfully and ran without any issues

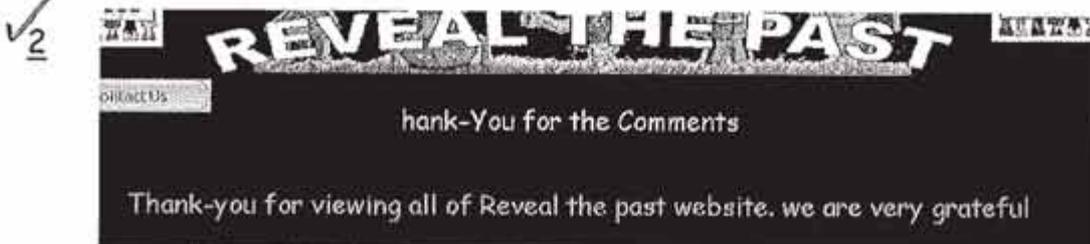

Interactive/ Multimedia features

Marquee scroll

Marquee scroll is an image or text that moves from left to right or top to bottom. Throughout my website I have used a number of marquee scrolls that are images and text. I included these as I felt that they look professional and were eye-catching they stand out on each webpage.

Testing was successful

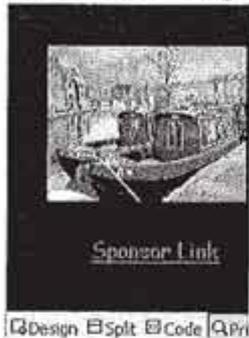

This feature was successful, it worked properly.

DHTML effect

DHTML effect is an image that changes to another one when the cursor moves over it. I decided to use this features as it looked professional and was eye catching. It also makes the page more interesting.

1- This is the image before I moved the cursor over it

2- This is the image when I moved the cursor over it

This feature was successful

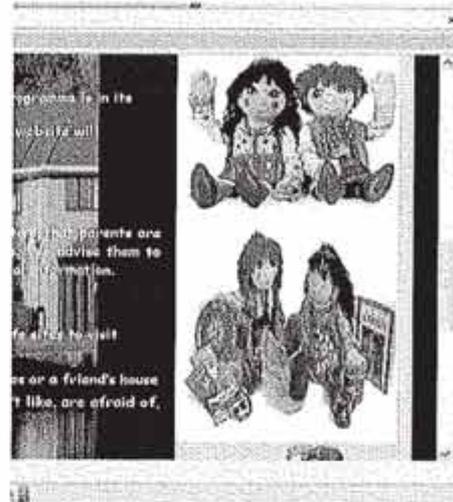

Slide Image

This is an image that can be scrolled through and not all seen at once. I decided to use this feature as it meant that I was able to insert more images on the webpage and it looked more professional and eye-catching and was not together.

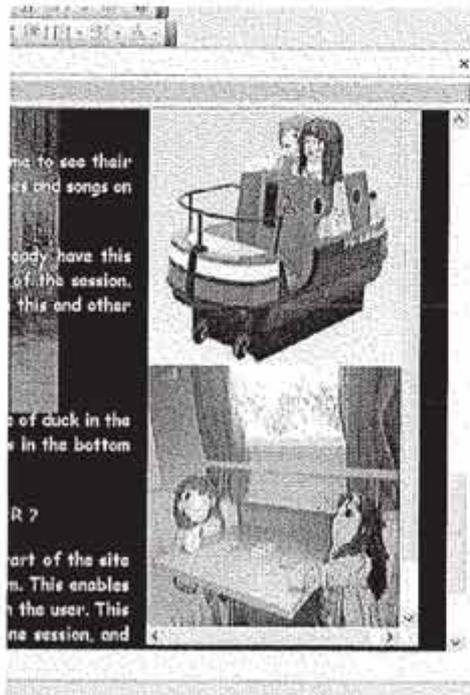

1

2

3

Feature works

This feature was successful.

Form

A form gives users the opportunity to write their comments about Reveal the Past website. I used this because it was a quick and easy method to share opinions on the website.

REVEAL THE PAST

Thank you for viewing all of Reveal the past website, we are very grateful for your comments and we will try to make any changes to the website that you have suggested that we think are necessary. We hope you enjoyed the website.

Testing was successful

This feature was successful.

Search engine

A search engines lets users browse through my website to look for information. I decided to use this so that users could access information they wanted quicker.

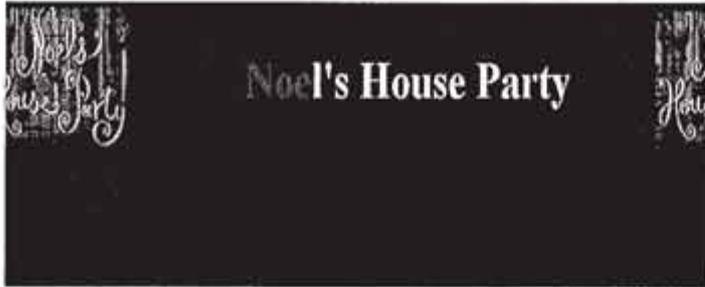

This feature was unsuccessful due to C2K restrictions.

Neon text

This feature is text that flashes from blue to white I decided to use this as it makes the text stand out and makes the webpage eye-catching.

1

2

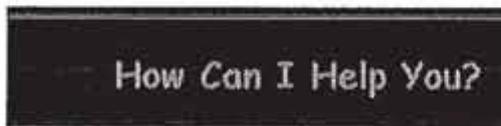

This feature was successful

Rainbow text

This is a feature which changes the text different colours of the rainbow. I used this features as it was interesting and professional looking.

1

2

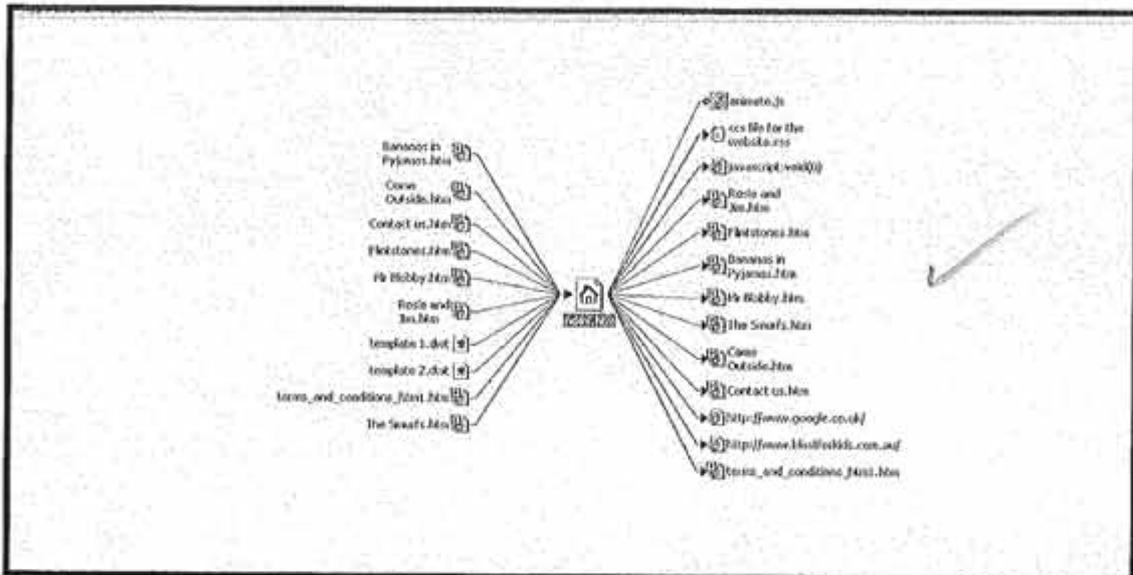

This feature was successful.

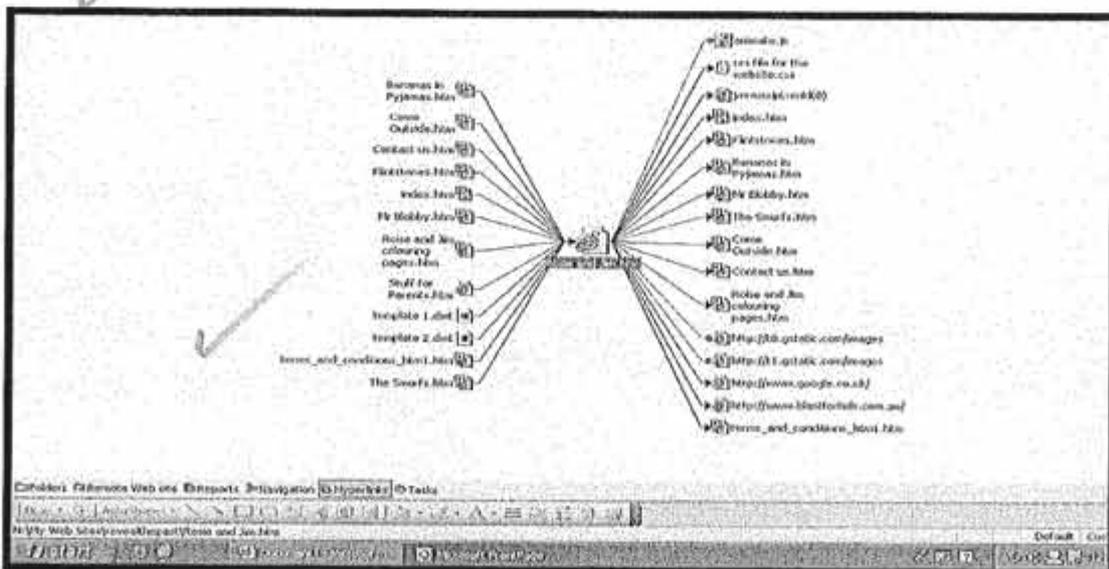

Hyperlinks testing

I will test all my hyperlinks in my website to see if they are working efficiently and to see if I am able to use it.

Detailed + thorough testing of website to ensure it meets the design specifications and is fully functional.

Reveal the past
Evaluation Questionnaire

'Reveal the Past' website is aimed at girls and boys to remind them of the programmes that they used to watch. It also is aimed at children between the age of 3 and 10 to provide them with information and video clips on kid's programmes they might enjoy and haven't heard about before.

Please take the time to fill out the below questionnaire about Reveal the Past website.

1. Does the website upload quickly?

Yes No

2. What was your overall first impression of the website?

3. Is the colour scheme for the website appropriate?

Yes No

If No, why?

4. Are the images of a high enough quality?

Yes No

5. Do you feel that there is a good range of text and images?

Yes too little text too little images

6. Do the Multimedia features work?

Yes No

If yes, do they enhance the overall appearance of the website?

Yes No *If No, why not?*

Task F

Evaluation

I will now analyse my website and evaluate how I performed throughout the designing and creation of the website.

Introduction

The aim of my website is to supply users with information on kid's TV programmes that were made in the 90's. The target market is for young children and people who were born in the 90's to make them remember the kid's TV shows they used to watch and for young kids to find out about shows that they haven't seen before and might enjoy.

Consistencies

Throughout my website I have included a number of consistencies. I included consistencies so that it saves me time not having to add the same information on each page. I started with creating a CSS file and then inserted this into a template so the template could be added to each page which saved me time. The features I included on the CSS file and template were:

- Table
- Hyperlinks
- Interactive buttons
- Logo
- Images of characters from each page
- Marquee scroll
- DHTML effects
- Headings 1/2
- Entertainment logo

- Domain name

Table

I used tables in my website so that all the information stayed in the necessary position and didn't move about. I felt that this was a positive impact on the website as it prevented text and images moving about and saved me time having to adjusting them. J +ive

Hyperlinks

I inserted hyperlinks at the bottom of the template. A hyperlink links users to pages internal and external. I decided to use them as they are professional and are quicker for users to access pages. I felt that this feature had a positive impact on the page, as it looks professional and was user friendly. J +ive

Interactive buttons

Interaction button are a type of hyperlink that links users to different pages within a website. They are situated on the template below the images of the characters of each page. I decided to use them in my website as it gives users quick access to different webpages without having to look for them. I felt this had a negative impact on each page, as the colours used for the interactive buttons makes the text hard to read and see. If I had to redo this in future I would change the colour of my interactive buttons to a darker blue and a lighter pink for the text so the text on them stands out and are easy to read. S -ive

Logo

I have inserted a logo in the top middle of the template. I created the logo by inserting Clip Art of an image of children which I found on the Internet. I inserted the logo so people would know the name of the website and it would be eye-catching. I felt that this had a positive impact on each page as it stood out and would convince people to read on as it looks interesting. J +ve

Images

This feature is of images of each character that is in each webpage. I inserted this image so that users could see who the characters were that would be on each page and it would inform users. I felt this had a positive impact on the website as it looks professional and eye catching.

Marquee scroll

This is a scroll of text that moves from the right to left along the top centre of each page. The text is white and states the name of each webpage. I inserted this feature because it would appeal to the audience and would make the website look more professional. I felt this had a positive impact on the website as it enhances the overall effect of each webpage. J +ve

DHTML Effects

This features changes images from one picture to another when the cursor is moved over the image. I decided to use this feature as it is eye catching and will appeal to users especially those users who are of a young age. This feature had a positive impact on each page as it looks professional and makes the page stand out. +ve

Heading 1 and 2

This feature was inserted onto my CSS. It changes the font of my main heading and subheading so that it can be inserted into my template to go on all pages so that the text is consistent. I decided to do this as it would save me time from having to change the font on each page. I felt that this had a positive impact on the webpage because the webpages look more professional because they are consistent. J +ve

Entertainment logo

This is a logo from an entertainment agency it links users to their webpage it is like a hyperlinked image. I inserted this on each page so that users would know that the website is legal and suitable for all ages. This has a positive impact on each webpage as parents will know that this website is suitable for children and it is all fact based. J +ve

Domain name

The domain name for this website is www.revealthepast.co.uk. I inserted a domain name as every website needs a domain name so that it can be identified. This has a positive impact on the website as it is a catchy name and users will remember the name of the website so they will know what it's called when they want to access and browse it. J +ve

For the next section of my evaluation I will look at every aspect of each webpage and evaluate it. I will also evaluate the additional features on each page.

Homepage

The aim of this page is to inform users about the history of children's TV programmes and to give them a brief description about each TV show that is included within the website.

My first impression of this page was that it was eye catching and attractive. From handing out questionnaires I found out that nine people agreed with me about this and they are ranged from 11 to 49 years old. This impression meant that my homepage appealed to a range of age groups. Although one person who did the questionnaire did say that it was a bit too bright this makes it hard to read. If I had to redo the colours used for this website in future I would make the colours a bit duller to make the text easier to read. +ve
S

From looking at the layout of the home page I feel that it is easy to read the text and the layout is suitable. In relation to my questionnaire I found that five people agreed with the layout for this page but others said that not enough images were provided. I like the layout of this page and feel that no changes need done to it as in my opinion it looks professional. +ve
J

Looking at the contents of the homepage I didn't like all the contents provided on this page as some of the information is irrelevant and hard to understand for some age groups. From looking at my questionnaire I found that an 11 year old found the contents on the homepage hard to read and understand. If I had to insert information on this page in the future I would read all the information inserted and decide weather it is suitable for all age groups. -ve
S

For the homepage I felt that there was a balance of text and images as I didn't want too much text on the homepage. I liked this balance of text and images as it made the webpage look professional and the text could be read easily. J

For this page I didn't include external hyperlinks. I felt that this was a disadvantage as users weren't able to find anymore information about the history of the children's show. If I had to do this again I would insert external hyperlinks so that users could get access to more information about the history of the show and they would be more informed. +ve S

On this page I inserted a search engine as a additional feature. I liked this as it links users quickly to information they want to locate. From looking at my questionnaire everyone said that my interactive features work effectively. Although I feel that if was to redo this page in future I would add more additional features as it would look more interesting and would enhance the webpage. J

From evaluating my questionnaire eight out of ten people said that the website met my target audience. I would have preferred if all people had the same opinion. If I had to do this page again I would make it more appropriate for young people as it was the young people who said it didn't match their needs.

Rosie and Jim

The aim of this page was to inform users about Rosie and Jim, a show they used to watch when they were children and also to let children who have never seen it before know about it.

My first impression of this page was that it was colourful and eye-catching. I felt this was a strength as an independent individual viewed my website and was had the same opinion. As it was colourful, this webpage stood out. +ive

A weakness with this page is the layout. From looking at my feedback from my questionnaire eight out of ten people agreed with this. They said that the information is quite cramped together making it hard to read and doesn't suit the target audience as children may find it hard to follow which is evident by what the 11 year old said. To improve this in future I would make the layout suitable for kids as well as adults so that all the entrainment stuff is together and easy for the children to find. -ve
S

A strength I felt this page had was that the contents supplied on the page was suitable for all ages unlike the homepage which meant that it didn't limit users and more children may want to look at this page as well. +ve

In relation to the website a weakness I felt the website had was that there wasn't a good balance of text and images. From looking at the feedback from my questionnaire six out of ten people said there were few images. This is a weakness as it makes the text hard to understand and read and also means that it may prevent viewers looking at the rest of the webpage. To improve this in future I would have less text on the website and include a bit more information so that it will look more professional. -ve
S

A strength I of this webpage was that I included a number of external hyperlinks to video clips. This was a strength as it allowed users to access

videos about Rosie and Jim. Although I felt that I could have included some more external hyperlinks. If I had to improve this page in future I would include more external links so that users could be more informed. S

I inserted a marquee scroll of an image that moves from the right to left on this page I also included a hyperlinked image that links users to a page that they can print out colouring pages and I included the theme tune of Rosie and Jim. I felt that this is a strength with the website as it is interesting and enhances the overall presentation of the website. It also makes it more user friendly and allows users to sing along to the song. +ve J

From looking at the feedback the Rosie and Jim webpage met the needs of it's viewers but I felt that a few adjustments could be made so it is suitable for all ages.

Colouring in pages

Throughout my website all of my main pages have a colouring in page linked to it as it. I did this so that they could be accessed quickly. I felt that this was a strength as it links users back to the main webpage they were on without having to go back to the homepage. The only colouring page that was different was the Bananas in Pyjamas one as it had the answers to the disordered image. I felt that having these answers was a strength so users didn't have to search the internet to know if the answer was right I felt that this page met it target market as it was users friendly for children. +ive

Stuff for Parents

The aim of this page is to allow parents to know the terms associated with Rosie and Jim and to know it is not a copied version of the programme, it is legal to watch. It also advertised Ragdolls to buy so that parents can get ideas of what toys to get their children.

My first impression of this page was that it looked professional and the text was easy to read. This was a strength of the webpage and some viewers had the same opinion because one quoted that "all the text could be read easily and the webpage looked very professional."

I liked the layout of this page as it was suitable for the target market and the contents are easily read and to understand. The information isn't cramped together. This is a strength because it makes the webpage look very professional. *five / J*

I felt that the contents provided on this page could be more straight to the point. This is a weakness with the page because it may cause confusion amongst users. When doing this page in the future I would read all the information included in the page and make sure it is relevant and will be informative. *-ve J*

In relation to this page a strength I felt that this page had was the suitable balance of text and images. This was a strength as users won't get bored whilst on this page and will be informed about relevant information. It is also a strength because it makes the webpage appealing. *five J*

A weaknesses I felt that the webpage had was that it didn't contain external hyperlinks. This was a weakness as users can only obtain a limited amount of information when viewing this webpage. They can't access information about where to find toys for their kids and locate more information about the terms associated with Rosie and Jim. To improve this in future I would include more external links as it would look professional and would enable users to access more information. -ive
J
S

I included neon text, a search engine, an image stroller, a line and an image behind text on this page as well as my consistent features. I felt that this was a strength with the webpage as ten out of ten people who completed the questionnaire agreed that all the interactive features worked well and enhanced the web page and also made it look more professional. +ive
J

I felt that this page met the needs of the target market as I got parents to look at it and they said they understood the contents and it gave information that would convince them to watch Rosie and Jim.

The Flintstones

The aim of this page is to inform users about The Flintstones and also to let children who have never seen it before to learn about it.

My first impression of this webpage was that it is very cramped. From looking at the feedback two out of ten people agree with this. This was a weakness with my website as it will distract users away from the page as it looks boring to read. To improve this in future I would change the -ive
S

amount of text within the page so that it looks more professional and the existing text can be easily read.

In relation to the webpage a weakness I felt it had was that the layout was inappropriate for the target audience as it was hard to read the text and therefore it may not be fully understood. This is a weakness as it looks unprofessional. To improve this in future I would change the layout so all the entertainment is on one side and the characters are on the other so it is easier to follow and understand.

In relation to the contents on this page I felt that they were appropriate for each year group and the text was easier to read which is what an independent viewer aged 11 said. This was a strength as it didn't limit users and it also appealed to a range of age groups. Although I felt there could have been some more children's stuff such as cross words and puzzles so if I had to improve this page in future I would add a bigger children's section as it looks more professional and may attract more children to use it.

A strength I felt this webpage had was that it had a good balance of text and images. It also had the same view. This was a strength as it wouldn't bore reader and made the webpage interesting and appealing to look at.

On this webpage I included video links which was a strength to the page as it allows users to watch clips of The Flintstones and gets them to remember how much they may have liked to watch the show. Although I felt a weakness with this page was it could have some more external

hyperlinks so that users could be more informed about the Flintstones. If I had to do this page again I would include more external hyperlinks as it will look more professional and be more informative. 6

I included a marquee scroll of an image that moves from the right to left on this page I also included a hyperlinked image that links users to a page that they can print out colouring pages and I included the theme tune of the Flintstones I felt that this was a strength with the website as it was interesting and enhanced the overall presentation of the website. It also made it more user friendly and allowed users to sing along to the songs. I am able to prove this is a strength as ten out of ten people who completed the questionnaires agreed with. 7

I felt that this webpage didn't meet the target market as there are not enough children's features to keep children who use it entertained. This is therefore a weakness. If I had to improve this webpage I would include more features that would appeal to children so that they would be fully entertained when viewing this page. 5

Bananas in Pyjamas

The aim of this page is to inform users about the Bananas in Pyjamas show users to watch in the 90's and also to let children who have never seen it before become informed about it.

My first impression of the Bananas in Pyjamas webpage was that it was colourful and attractive. It was also very bright and eye catching. Eight out of ten respondents agree with this and this shows that it is a

strength because if it contains their attention they are more likely to read the information in it.

In relation to the layout of this page I felt that it was a strength as the layout was split into description of characters, description of show and entertainment. This was a strength as it looks professional and was user friendly and made it easy to navigate around. +ve

From looking at the contents of this page I feel that it is appropriate which is proven by what said in the questionnaire. She said it was informative. This is a strength because it means that all the information is relevant and will provide users with information that may be useful. +ve
J

I felt that the Bananas in Pyjamas webpage had a good balance of text and images. This was a strength as it looked professional and may not bore users who are viewing the webpage. J +ve

A strength I felt of this webpage was that it included a number of external links to different Bananas in Pyjamas websites and all the external hyperlinks worked. Ten people that completed the questionnaire were satisfied with the external hyperlinks included throughout this webpage. This is a strength as users can find out more information about Bananas in Pyjamas and don't have to waste time looking for the information from other website. +ve

On this page I have included a number of additional features such as a marquee scroll image, sound and hyperlinked colouring pages. I felt that

including these feature were a strength as it enhanced the overall appearance of the website but if I had to do this page again I would insert more features as it would look more professional and would get users to interact with the webpage. S

A strength I felt this page had was that it met the needs of the target market. This was a strength as it is suitable for the aimed users and it suitable for a number of different age groups. +ve J

Mr Blobby

The aim of this page is to inform users about Mr Blobby a show they may have used to watch when they were children and also to let children who have never seen it before know about it.

When looking at this page my first impression was that it was very spacious and boring looking. It also looked very dull. I felt that this was a weakness with the website as it meant it looked unprofessional. If I had to improve this page in future I would make it brighter and include some more information so that it looked professional and didn't look as spacious. +ve J S

From looking at the layout of this page I felt that it was a strength as it was split into 3 different section like the Bananas in Pyjamas page. This meant that it was easy to read the text and understand it and an independent viewer also agreed with this. +ve J

A weaknesses I felt this page had was that the contents included on the page wasn't suitable for all ages. This was a weakness as it meant that not

all the information was in a language suitable for young children to understand and the website also doesn't meet part of its aim. To improve this in the future I would read the information and make sure it is suitable for all ages and is easy to understand. S

-ve / J

J Another weakness was that the webpage didn't contain a suitable balance of text and images which meant it looked boring and unprofessional. This was a weakness as it would prevent users from wanting to look at the website as it looked like it wasn't informative and interesting. If I had to do this again in the future I would add more text and images to fill the page so that it looks more professional and attracts more users. S

-ve

A strength of this webpage was that I included a number of external hyperlinks to videos. This was a strength as users are able to access video clips of the show quicker and it may help them to understand the contents of the webpage. According to the feedback, users of the website had the view that these hyperlinks made the webpage very professional.

+ve
J

I have included a number of additional features such as a marquee scroll image, sound and hyperlinked colouring pages. I felt that by including these features was a strength as it enhanced the overall appearance of the website and made each webpage eye catching to viewers.

+ve

I felt that the Mr Blobby webpage matched the target market although it could have provided a bit more information about Mr Blobby so if I had to do the page again I would include more information. S

Noel's House Party

I decided to create this page so that users would know what show Mr Blobby came from and would know about who presented it and what other shows Noel was involved in.

My first impression of this page was that it was eye catching and attractive. It was also clear and easy to read the text from getting a friend to look at this page as she agreed with what I said, therefore, this is clearly a strength of the website.

J
+ve

I felt that the layout of the page was professional. This was a strength as it was user friendly and the information could be followed easily. From reviewing the feedback the majority of respondents felt that the layout made the website easier to navigate.

+ve

In relation to the contents of this page I felt that it was a weakness because the information provided wasn't relevant. This was a weakness because it may make users not want to read it if the information if it is not informative. To improve this in future I would read the information I inserted and make sure it is relevant before including it in the website which would look more professional.

+ve

J

S

A strength with this webpage was that I included a good balance of text and image. This was a strength because it meant that it made the webpage appealing, eye catching and professional.

+ve

J

In relation to including external hyperlinks I felt this was a weakness I had as I only included video links of the show. This was a weakness as it

-ve / J

didn't inform users very much about other shows. If I had to do this page in future I would add a link to other shows he has taken part in so the webpage would be more informative and users may want to look at it. S

+ve

On this webpage I included neon text and sound. I felt that this was a strength as it enhanced the website although a weakness could be that I didn't include enough additional features. If I had to do this page again I would include more additional features so that the webpage would look more professional and eye catching. S

I felt that this page met the target market which was a strength because users may want to read the contents as it is related to Mr Blobby and is relevant to the theme of the website.

The Smurfs

The aim of this page is to inform uses about The Smurfs TV programme that was watched in the 90's and also to let children who have never seen it before know about it.

My first impression of this webpage was that it was bright and eye-catching. I felt that this was a strength because it will catch the attention of users. one of the people who looked my website she said she liked this page a lot and would be encouraged to head the contents of it.

In relation to the layout of this page I felt that it was a strength because the main text isn't as long as the two parts of text down each

side. This was a strength as the text is well spaced out which makes it look professional and it can be read easily as it is easy to see.

From looking at my questionnaire feedback six people said the content on the page wasn't suitable for children as it is hard to understand. This was a weakness as it will limit the amount of users that understood the information. To improve this in future I would read all the text before I enter it into the webpage and change the language of it to suit all age groups. -ve
s

A strength I felt this webpage had was in relation to balance of text and image that it contained. There was a sufficient amount of text and images. This is a strength because users won't get bored with the page as there isn't too much text for them to read compared to pictures which make the website look interesting and professional. +ve

I have included a number of external hyperlinks on this webpage which takes users to video links of the Smurfs and also to more information about them. I felt that this was strength because it meant that the website was more informative but contained quick links to more information which would save users time on having to look for the requires information. In relation to my feedback ten people said that the external links worked effectively which has a positive impact because the users will be able to be more informed about the TV show. +ve

-ve A weakness of this page was that it didn't include enough additional features. This was a weakness as the webpage didn't look as professional as it could have. If I had to improve this in future I would add in neon

text and some games on this page to made it more attractive to users and this it would also help enhance the overall presentation of the webpage.

I felt that the Smurfs webpage matches the needs of the target market because when I asked a person to look at the webpage they said they liked the webpage and that it just needed a few adjustments and from looking at the feedback eight people felt the website had met their needs.

Come Outside

The aim of this page is to inform uses about the Come Outside a kids' TV show and also to let children who have never seen it before to know about it.

My first impression of this webpage was that it was boring and unprofessional looking. From looking at my feedback from my questionnaires two middle aged people agreed with me. This was a weakness as it meant that the webpage may not encourage users to make use of it. To overcome this weakness I would change the layout of the page and include more detail into the page by including more features and images so that the webpage looks more professional and eye-catching. -ve
J
S

I felt that the layout of this page was very boring and made the text and images look cramped together. This was a weakness because it meant that the text would be hard to read and it may look unprofessional. To improve this in future I would spread out the information throughout the page so that is clear to read the text and view the images. -ve
J
S

In relation to the balance of text and image on this page I felt that there was not enough text or images. I felt this was a weakness as the information I had was cramped together but I still could have more information make the webpage more informative. If I had to do this in future I would add more text and images throughout the page so that it is more informative and looks more appealing to the users. S -ve J

Throughout this page I included external hyperlinks to videos. Although I included external hyperlinks I still felt that it was a weakness. I felt that that this was a weakness because users would not be able to get a wider range of information on the show and would have to search through other websites if they needed more information. To improve this in future I would include external hyperlinks to the Come Outside website so that users can find more information about the show without having to waste time searching for other relevant websites. S -ve J

I included additions features such as sound and a marquee scroll image on this page, however, I don't feel that this is enough additional features on the page. If I had to do this again in future I would include more additional features to help improve the appearance of the webpage. S

I felt that this page didn't meet the target market as there wasn't enough information on it. This was proven by the feedback I got obtained. When , said it needs to be more detailed so that it is more informative. W C

Contact us

The aim of this page is to supply users with contact information and allow them to submit comments.

My first impression of this page was that it is professional. I felt this was a strength with the page as it was easy to understand, eight people who completed the questionnaire also had the same opinion.

In relation to the layout of my contact page it looked professional as it was clear and the text was easy to read and users would be able to find the contact information they are looking for quickly.

I included little contents in the contact us page. I felt that this was a strength as users wouldn't have to look for the contact information it would be straight there when they opened the webpage which would save them time having to look at it.

I included an email address form and marquee image on this page. I felt that having these features on this page was a strength as it helped enhanced the overall presentation of the webpage.

+ve
J

I felt that this webpage met the need of the target market as it was suitable for any age group and it provided clear instructions on how to submit a comment, therefore a range of age groups would be able to do this.

Thank You

The aim of this page is to thank users for using my website and to let them see what comments other have wrote about the website.

My first impression of this page was that it looked professional and the text was easy to read. This was a strength because it meant that it wouldn't bore readers and would be straight to the point. I felt the layout of the page was suitable for all age groups. I felt that this was a strength as it meant that it was easily followed by any age group and wasn't hard for children to understand the content of the webpage. From looking at my feedback from the questionnaires the majority of people who looked at the website felt that this page was suitable. +ve
J

I didn't include any additional feature on this page but I felt that this was a weakness because the website didn't look as interesting as what it would have looked if I had of used more features. In order to overcome this problem in future I would include neon text and more marquee scroll images to help enhance the overall presentation of the webpage. S

I felt that this page met the needs of the target market as it contained straight to the point information and was easy to understand and navigate about.

Terms and Conditions

The aim of this page is to inform users about the terms and conditions of Reveal the Past website.

My first impression of this webpage was striking but it had too much text and not enough image. From talking to a independent viewer she told me the same thing which meant that this aspect was a weakness. If I came across this problem in the future I would include less text so that it doesn't look as boring. S

In relation to the layout of the webpage a weakness I felt it had was that all the text was very cramped together which made it unclear to read and understand. To overcome this problem in future I would include less text and spread the text that I have throughout the page so that it looks professional and clear to read. S

In relation to the contents of this webpage a weakness I felt it had was that the information was at times irrelevant and there was too much unnecessary information. This was a weakness as it looked unprofessional and may bore users. In order to overcome this problem in future I would read all the information I put in the webpage and get an opinion from a teacher to see if the information is necessary. By doing this it will make the information more appropriate for a range of age groups. S

In this page I included a limited amount of images and too much text. I felt that this was a weakness. From looking at my feedback I noticed that the users who viewed my website agreed with me on this aspect. I felt that this was a weakness as the page looked boring and didn't appeal to many users. If I had to overcome this problem in future I would include an equal amount of text and images so that the webpage would appeal to a wider range of people. S

Throughout this page I included few additional features. I felt that this was a weakness as the webpage didn't look as professional as it could have been. If I had to overcome this problem in the future I would include neon text, sound and DHTML(S) to help enhance the overall presentation of the webpage. 5

I felt that this page didn't meet the needs of the target market as it was very hard to read the text and wasn't suitable for all age groups.

In this section I will evaluate my strength and weakness when creating the website. I will also suggest any improvements that could be made if I was to do this task in the future.

Design

A strength I had when designing the website was that I carried out enough research. This was a strength as I used a variety of different resources to find the information such as the internet book and website. I felt that from getting a lot of information I wasn't limited to what information I could include in my website.

In relation to my performance a strength I felt I had when designing the website was that I created story boards. I created story boards so that I had a plan of what I was going to insert on each page of the website and I knew exactly how many pages I was going to have and where everything would be situated. I felt the storyboards were useful when I used them when creating the website as I knew where to put everything which saved me time when creating the website. Although I felt that I didn't refer to the story board enough when creating the website which made it harder

for me to create the website as I had to take time to think what was meant to go on each page. If I had to create the website in the future I would make more use of my story board as it would save me time and more detail would be included in my website. In relation to my performance when designing the website a strength I felt I had was that I updated my story boards as I went along by creating a table of the changes that were made to it. This was a strength as I knew what changes were on each page compared to what it used to be and it made it more professional making necessary changes to the website. +ve J S

In relation to my performance when creating my website a strength I felt I had was that I picked a suitable colour scheme for the website. This was a strength as it blends in well and was eye catching although a weakness I felt I had was that some of the colours made the text difficult to read. If I had to pick the colour scheme in future I would pick a little duller colour so that the text is easier to read and as effective for viewers as the bright colours. +ve J S

In relation to my website when creating my website a weakness I felt I had was that I didn't include enough features. This was a weakness because the website didn't look as professional as it could. I felt that if I had to do this task in future again I would insert more features as from looking at the features I have already included in my website I feel that it makes the website professional and enhances the overall appearance of it. It also allows users to interact with the website and makes it user friendly. -ve J S

Implementation

When creating the website I used a CSS. I used this so that I could pick the font colour of the text on each page and the hyperlinks and the table lines. I used this so that I would have consistencies on each page and would not have to insert them on each page it would be atomically done when attached to each page. In relation to my performance when creating a CSS I felt that this was of a benefits and it made the website professional and consistent which saved me time from having to insert the information manually on each page. If I was creating a website in future I would use a CSS sheet as I feel it was quicker to do although it was hard to understand how to use it. In future I feel I would do more research through books websites to see how to use a CSS so it wouldn't take up time before creating the website knowing how to use it and it would be much quicker the next time I use it.

After creating a CSS I created a template to attach to each page of the webpage. I created a template so that I could include consistencies throughout the website such as features. I felt that this was a strength as it saved time and looked more professional because each page has consistencies. In future I felt that I would use a template as it is easy to add consistencies on to each page but I would like to get more training as I found it very hard to use it took time to find out how to use it.

+ve
J

In relations to my performance when creating the website I inserted a table on each page. I inserted a table to position my text and images so that they didn't move about which saved me time having to adjust them all the time. I felt that this was a strength as it saved me time. This

would be something I would use in future as it kept all my information in the correct position which helped to make the website look professional. S

Whenever I created the website I used FrontPage. In relation to my performance when using FrontPage a weaknesses I felt I had was that I didn't do enough research on how to use the software which wasted time trying to figure out how to use features of the software. This was a weakness as it wasted time and meant that some applications may not have been used correctly. In future I felt I would use online tutorials and teacher support so that I know how to use the software before beginning to create the website. Although I felt that a strength I had when using this software was that any skill I did achieve once I knew how to use I made good use of it. This was a strength as I created the website to the best of my abilities using all the knowledge and skills I had.

-ve
J

S

+ve
J

In relation to my performance when designing the website a strength I felt I had was that I had the ability to plan effectively. This was a strength as I was able to create the layout of the website working from my plans and not by making them up as I went along. Another strength I had in relation to my performance was that I was able to deal with any problems that arose with the layout. This was a strength because I was able to use my imitative to go to my teacher for help and not waste time trying to work it out on own. I was also able to update my storyboards when I had made the changes to the layout which allowed me to overcome my problems when the layout didn't work out the way I had planned it.

+ve
J

222

During the creation of my website I inserted a number of different coding which when entered turned into different interactive features. In relation to my performance when inserting the coding a weaknesses I felt I had was that I wasn't able to include the coding in a straight forward manner as I found it very hard to add the coding. This was a weakness as it wasted ^{time} If I had to do this in future I would ask a teacher or professional for help so that I wouldn't waste time and would be able to insert the coding on the first go. Another weakness I felt I had in relation to inserting the coding was that I had to spend extra time as well on features that I hadn't planned to insert in my website which meant I had to research the coding when I could have been doing something else if I had planned the coding better.

If I had to include coding in future I would be confident to insert the feature. I now know how to insert coding even though it took me extra time to find how to include them.

In relation to my performance when dealing with problems when creating the website a strength I felt I had was that I used my initiative to ask my teacher for advice on how to do tasks I didn't know and I also looked at tutorials. This was a strength as I didn't spent more time trying to fix features that I didn't know how to work.

+ve
5

Testing

Once I had finished creating the website I had to test a number of features to see if they all worked. The feature that I tested included:

- Screen sizes
- Browsers

- Hyperlinks
- Interactive features
- General testing

In relation to my performance when testing the website a strength I felt I had was that I used a number of different screens to test to see if the website uploaded all screens. This was a strength as I now know that users won't be limited to a particular screen as I tried as many screen as possible.

I tested different browsers when doing the testing section. In relation to my performance when doing this section a weakness I felt I had was that I didn't use enough browsers. This was a weakness as I don't now know if the website opens with all browsers and some users might not be able access the website. This meant that I was being lazy when I could have just used more browsers. If I had to complete this testing in future I would use more browsers so that I know that all browsers work and everyone can access the website.

In relation to my performance when testing the hyperlinks a strength I felt I had was that I made sure that all my hyperlinks were working. This was a strength because I reinserted hyperlinks that were working and checked to make sure they were all connected This was a good thing because users would be able to use all hyperlinks and not have to go and look for information somewhere else they because they can't access it on my website.

five
J

When testing the website a strength I felt I had was that I tested the interactive feature properly. I did this by doing printscreens of each interactive feature and looking at each one to see if it played and work. This was a strength as it enhanced the overall appearance of the website if all the feature worked I also fixed any features that didn't work to made the website look more professional. +ve/5

When testing the website I made sure every aspect of every page was working by doing a general test. I felt this was a strength as it made the website look professional if I made sure all features worked and I also tried to correct any features that didn't work.

Once I had completed all the testing of the website I created a questionnaire. I felt this was a strength as I was able to receive feedback and know how different age groups though about the website. I found out that from looking at all the feedback that everyone liked the website but felt it could be made more suitable for younger children so if I had to do the website again I would spend more time looking at the information and make the information more suitable for young children.

Conclusion

From analysing the website and myself I have came to the conclusion that I could have spent more times planning the website and learning new skills so that I didn't waste time when creating the website. If I had to do this website all over again I would make sure I knew how to do everything. I felt the website turned out very well and everyone liked the website, it was very interesting and appealing. I also feel that I worked to the best of my abilities.
