

**ADVANCED GCE****BIOLOGY**

Practical Examination 2 (Part A – Planning Exercise)

For issue on or after: **Monday 17 November 2008****2806/03/PLAN**

Candidate Forename		Candidate Surname	
-----------------------	--	----------------------	--

Centre Number						Candidate Number				
---------------	--	--	--	--	--	------------------	--	--	--	--

**TIME** This Plan must be handed in by the deadline given by your teacher.**INSTRUCTIONS TO CANDIDATES**

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the boxes above.
- Attach this booklet to the front of your Plan.

**INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [ ] at the end of each question or part question.
- In this Planning Exercise, you will be assessed on the Experimental and Investigative Skill:  
Skill P: Planning
- You will be awarded marks for the quality of your written communication.
- Detailed notes for guidance are given overleaf.
- This document consists of **4** pages. Any blank pages are indicated.

**Authentication by teacher**

I declare that, to the best of my knowledge, the work submitted is that of the candidate concerned. I have provided details on my Report Form for the Practical Test of any assistance given.

Planning	16	

## Notes for guidance

- 1 Your Plan should have a clear and helpful structure and should be illustrated by diagrams, tables, charts, graphs etc. as appropriate. Remember that these can often be used to replace words in the text. Diagrams should be relevant to the content of your Plan and positioned appropriately. Labels on diagrams, flow charts or tables should be clear and concise. Large blocks of text should be included in the word count.
- 2 You should take care to use technical and scientific terms correctly and to write in clear and correct English.
- 3 Your Plan should be hand-written or word-processed on A4 paper, which should have a hole punched at the top left-hand corner. Pages should be numbered and should have a clear margin on the right hand side. You should write (or print) on one side of the paper only and each sheet should be marked with your Centre number and Candidate number.
- 4 You should show that you have consulted an appropriate range and variety of sources. At the end of your Plan you should list clearly the sources you have used. You should refer to these references in your Plan where appropriate. Where you have incorporated material which has been copied directly from a source such as a book or the Internet, this must be acknowledged in your Plan and details included in the references at the end. However, it should be noted that the inclusion of copied material will not in itself gain credit. The list of references should not be included in the word count.
- 5 Your Plan should be based on the use of standard equipment, apparatus, chemicals and other materials available in a school or college science laboratory.
- 6 Your Plan should be between 500 and 1000 words. A Plan that is in excess of 1000 words is likely to have poor structure and unselective choice of material, so that full credit may not be available. You should indicate the number of words in the margin of the Plan at approximately 200 word intervals.
- 7 When you have finished, tie the pages loosely together (or use a treasury tag), with this sheet on the top, so that the pages turn over freely. Your Centre will give you the date by which your Plan must be handed in.

### NOTICE TO CANDIDATE

**The work you submit for assessment must be your own.**

**If you copy from someone else or allow another candidate to copy from you, or if you cheat in any other way, you may be disqualified from at least the subject concerned.**

- 1 Any help or information you have received from people other than your subject teacher(s) must be clearly identified in the work itself.
- 2 Any books, information leaflets or other material (e.g. videos, software packages or information from the Internet) which you have used to help you complete this work must be clearly acknowledged in the work itself. To present material copied from books or other sources without acknowledgement will be regarded as deliberate deception.

### Declaration by candidate

I have read and understood the **Notice to Candidate** (above). I have produced the work without any help from other people apart from that which I have declared in the work itself. I have acknowledged all source materials in the work itself.

Candidate's signature: ..... Date: .....

## Planning Exercise

In this Planning Exercise, two marks are available for the quality of your written communication.

**This Planning Exercise is about competition between two species of flour beetle.**

The confused flour beetle, *Tribolium confusum*, and the red flour beetle, *Tribolium castaneum*, are common pests of stored food products in flour mills and grain silos. Population growth of the two species is influenced by environmental factors, such as temperature, humidity and the quantity and quality of food. Competition between the two species is influenced by these environmental conditions.

**You are required to plan an investigation into the effect of at least two environmental conditions on competition between populations of *T. confusum* and *T. castaneum*.**

Flour beetles may be cultured in the laboratory in containers of flour mixed with powdered dried yeast. Suitable containers are jam jars, large specimen tubes or plastic boxes. The containers must be covered with a fine cloth, such as muslin, that allows air into the cultures but prevents the beetles from escaping.

Your planning must be based on the assumption that you may be provided with the following:

- cultures of *T. confusum* and *T. castaneum*
- suitable containers, such as jam jars, large specimen tubes or plastic boxes
- muslin or other fine cloth
- different types of flour that have been heat sterilised
- powdered dried yeast
- drying agents, such as silica gel or anhydrous calcium chloride, and different concentrations of glycerol in water to give different relative humidities
- hand lenses and microscopes
- school or college laboratory resources.

Give full details of your Plan to include:

- the apparatus and materials to be used
- a detailed method to include procedures that you would adopt to ensure that the results obtained would be as precise and reliable as possible
- a risk assessment and safety precautions.

Indicate briefly how you would present and analyse your data to draw your conclusions.

You are strongly recommended to consult the descriptors for Skill P as given in Appendix C of the Biology Specification.
