

7. One of the two pictures in Figures 3a and 3b is drawn in one-point perspective, and the other is not.
- (a) There is a copy of Figures 3a and 3b in your answer sheet. Draw lines on both pictures to show which picture is in one-point perspective and why the other one is not. On the appropriate picture, locate and label the central vanishing point and draw and label the horizon line. [3]
- (b) For the picture which is in one-point perspective, state an assumption that you could make in order to find the distance from the central vanishing point to the eyepoint. On this assumption, find the distance. [3]

Figure 3a
