

**Modified Enlarged 24 pt**  
**OXFORD CAMBRIDGE AND RSA**  
**EXAMINATIONS**

**Thursday 13 January 2022 – Morning**

**Level 3 Cambridge Technical in**  
**Applied Science**

**05847/05848/05849/05874/05879**

**Unit 2: Laboratory techniques**

**Time allowed: 2 hours plus your additional**  
**time allowance**

**You must have:**

**the Data Sheet**

**a ruler (cm/mm)**

**the Periodic Table**

**You can use:**

**a scientific or graphical calculator**

**an HB pencil**

**Please write clearly in black ink.**

**Centre  
number**

--	--	--	--	--

**Candidate  
number**

--	--	--	--

**First name(s)** \_\_\_\_\_

**Last name** \_\_\_\_\_

**Date of  
birth**

D	D	M	M	Y	Y	Y	Y
---	---	---	---	---	---	---	---

## **READ INSTRUCTIONS BELOW**

### **INSTRUCTIONS**

**Use black ink. You can use an HB pencil, but only for graphs and diagrams.**

**Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.**

**Answer ALL the questions.**

## **INFORMATION**

**The total mark for this paper is 90.**

**The marks for each question are shown in brackets [ ].**

## **ADVICE**

**Read each question carefully before you start your answer.**

**Answer ALL the questions.**

**1 It is Ali's first day as a work experience student in a chemistry laboratory.**

**Eve is a technician in the laboratory and is showing Ali how to use some laboratory equipment accurately.**

**(a) The first piece of equipment to be used is a measuring cylinder.**

**The level of liquid in the measuring cylinder is shown in the diagram.**

5

- (i) State TWO ways to obtain an accurate reading of the volume of liquid in the measuring cylinder.

1

---

2

---

---

[2]

- (ii) State the value for the volume of liquid in the measuring cylinder shown in the diagram.

Give your answer to an APPROPRIATE NUMBER of significant figures.

Volume = \_\_\_\_\_ cm<sup>3</sup> [1]

**(b) Eve then shows Ali how to use a balance. The balance has recently been calibrated.**

**(i) Why is it important to calibrate scientific equipment?**

**[1]**

**(ii) Describe how Eve should check the calibration of the balance.**

**[2]**

- (iii) Eve shows Ali how to measure the mass of a powder accurately.

Write the numbers 2 TO 6 in the table to show the order of steps that Ali should follow.

The first one has been done for you. [2]

STEP	ORDER
Place a weighing boat onto the balance.	
Transfer the powder from the weighing boat.	
Add powder to the weighing boat using a clean spatula, to the correct mass.	
Ensure that the balance is clean and that there are no substances on the balance.	1
Check that no powder is left on the weighing boat by placing it back on the balance.	
Press the tare button on the balance.	

- (c) Eve then teaches Ali about methods of waste disposal.**

**The first column in the table opposite lists some items for safe disposal.**

**Complete the table opposite to show the best method of disposal for each item.**

**Tick (✓) ONE box in each row. [4]**

<b>Item for disposal</b>	<b>Autoclave</b>	<b>Sharps bin</b>	<b>Recycling</b>	<b>Rinsed down the sink</b>
<b>Broken glassware</b>				
<b>Low concentration hydrochloric acid</b>				
<b>Petri dishes with microbes growing on them</b>				
<b>Used batteries</b>				

**(d) When Eve buys chemicals they are delivered with data sheets.**

**State FOUR pieces of information given on a data sheet for laboratory chemicals.**

1

---

2

---

3

---

4

---

**[4]**

- 2 Nina is a food scientist. She is analysing amino acids and nucleotide bases in a food supplement for athletes.**

**The amino acids found in the food supplement can be identified and quantified using different techniques.**

- (a) Which TWO techniques will allow Nina to identify and quantify the amino acids in the food supplement?**

**Tick (✓) TWO boxes. [1]**

<b>Method</b>	<b>Identification and quantification</b>
<b>Paper chromatography</b>	
<b>PCR</b>	
<b>GC</b>	
<b>TLC</b>	

- (b) Nina analyses the nucleotide bases found in the food supplement.

FIG. 2.1 opposite shows an HPLC chromatograph separation of nucleotide bases.

Use FIG. 2.1 opposite to estimate the retention times of adenosine and cytidine.

Retention time of adenosine =

\_\_\_\_\_ min

Retention time of cytidine =

\_\_\_\_\_ min

[2]

FIG. 2.1

# BLANK PAGE

- (c) The area under each peak can be used to determine the concentration of each nucleotide base in the mixture.

To determine the concentration of cytidine, Nina calibrates the HPLC machine using known concentrations of cytidine.

The results are shown in the table.

Concentration of cytidine / mmol dm <sup>-3</sup>	Relative Peak Area
0	0.00
2	0.15
4	0.32
6	0.48
8	0.63
10	0.78

- (i) Plot a calibration graph of relative peak area (y-axis) against the concentration of cytidine (x-axis) on FIG. 2.2 opposite.

Label the axes, use an appropriate scale, and draw a line of best fit. [5]

FIG. 2.2

- (ii) An unknown sample of cytidine was then tested. The relative peak area was 10.4.

Suggest how Nina should prepare the sample further before she can determine the concentration.

---

[1]

- (iii) After further preparation the sample was analysed again. The relative peak area was 0.52. Use FIG. 2.2 to determine the concentration of cytidine in this sample.

Concentration = \_\_\_\_\_ mmol dm<sup>-3</sup> [1]

- (iv) Calculate the concentration of cytidine in the **ORIGINAL** sample.

Concentration = \_\_\_\_\_ mmol dm<sup>-3</sup> [1]

- (d) Mass spectrometry can be used in conjunction with chromatography to identify the substances present in a mixture.

- (i) State **FOUR** key principles of mass spectrometry.

1 \_\_\_\_\_

2 \_\_\_\_\_

3 \_\_\_\_\_

4 \_\_\_\_\_

[4]

- (ii) Identify ONE piece of information that mass spectrometry tells us about a substance in a mixture.

Tick (✓) ONE box. [1]

Molar mass

☐

- 3 Acetic acid,  $\text{CH}_3\text{COOH}$ , is the main component in vinegar. It is a weak acid. James is doing a project to find the concentration of acetic acid in a sample of white vinegar.**

**The concentration of acetic acid can be determined by titration against sodium hydroxide ( $\text{NaOH}$ ), a strong base.**

**(a) James first prepares  $250.0 \text{ cm}^3$  of  $0.5 \text{ mol dm}^{-3} \text{ NaOH(aq)}$ .**

**(i) Calculate the molar mass of sodium hydroxide.**

**Use the Periodic Table.**

**Molar mass = \_\_\_\_\_  $\text{g mol}^{-1}$  [1]**

- (ii) Calculate the mass of sodium hydroxide James should weigh out in order to prepare 250 cm<sup>3</sup> of 0.5 mol dm<sup>-3</sup> NaOH (aq).

Use the Data Sheet and the equation:

$$\text{number of moles} = \frac{\text{mass (g)}}{\text{molar mass (g mol}^{-1}\text{)}}$$

Mass = \_\_\_\_\_ g [2]

(b) He pipettes  $25.0 \text{ cm}^3$  of a sample of white vinegar into a conical flask and then titrates this with  $0.5 \text{ mol dm}^{-3} \text{ NaOH (aq)}$ .

(i) What is the most suitable indicator for this titration?

Put a ring around the correct answer. [1]

phenolphthalein

bromothymol blue

methyl orange

(ii) State the colour **CHANGE** at the end point for the indicator chosen in (b)(i).

Assume that the white vinegar sample is colourless.

Colour change from \_\_\_\_\_  
to \_\_\_\_\_ [1]

**(c) James repeats the titration twice.**

**The volumes of  $0.5 \text{ mol dm}^{-3}$  sodium hydroxide needed to reach the end point in the three titrations are shown in the table.**

	<b>Titration 1</b>	<b>Titration 2</b>	<b>Titration 3</b>
<b>Volume of <math>0.5 \text{ mol dm}^{-3}</math> NaOH required / <math>\text{cm}^3</math></b>	<b>31.30</b>	<b>31.10</b>	<b>31.05</b>

**(i) Name the piece of equipment used to determine the volume of NaOH required.**

---

**[1]**

**25**

- (ii) Calculate the mean titre that James should use in his calculation.**

**Give your answer to 2 decimal places.**

**Mean titre = \_\_\_\_\_ cm<sup>3</sup> [2]**

- (iii) Calculate the number of moles of sodium hydroxide required to reach the end point.

Use the equation:

number of moles =

$$\frac{\text{mean titre (cm}^3\text{) x concentration (mol dm}^{-3}\text{)}}{1000}$$

Use your answer to (c)(ii).

Number of moles of NaOH =

\_\_\_\_\_ mol [1]

(iv) The equation for the reaction is

State the number of moles of acetic acid in the 25.0 cm<sup>3</sup> sample.

Number of moles = \_\_\_\_\_ mol [1]

- (v) The molar mass of acetic acid is  $60 \text{ g mol}^{-1}$ .

Calculate the mass of acetic acid in the  $25.0 \text{ cm}^3$  sample.

Use your answer to (c)(iv).

Use the equation:

$$\text{number of moles} = \frac{\text{mass (g)}}{\text{molar mass (g mol}^{-1}\text{)}}$$

Mass of acetic acid = \_\_\_\_\_ g [1]

- (vi) The concentration of acetic acid in a bottle of vinegar is normally shown on the label as a percentage. This is equivalent to mass of acetic acid in  $100 \text{ cm}^3$  of vinegar.

Calculate the percentage of acetic acid in the vinegar.

Give your answer to 2 significant figures.

Use your answer to (c)(v).

Percentage of acetic acid =

\_\_\_\_\_ % [1]

**(d) James decides to determine the concentration of acetic acid in red vinegar.**

**(i) Explain why he cannot use an indicator to determine the end point of this titration.**

---

---

**[1]**

**(ii) Suggest an alternative technique he could use to determine the end point of this titration.**

---

---

**[1]**

**BLANK PAGE**

- 4 Images for medical diagnosis can show structures hidden inside the human body.**

**(a) FIG. 4.1 shows a medical image.**

**FIG. 4.1**

- (i) State the name of the imaging technique used to create FIG. 4.1.**

---

**[1]**

- (ii) Describe the medical condition revealed in FIG. 4.1.**

---

**[1]**

- (iii) Describe ONE disadvantage of the medical imaging technique used to create FIG. 4.1.**

---

---

**[1]**

- (iv) Explain why some areas of FIG. 4.1 appear white and other areas appear black.**

---

---

---

---

**[2]**

- (b) FIG. 4.2 shows a medical image produced by a different technique.

**FIG. 4.2**

- (i) Name the technique used to obtain the image in FIG. 4.2.

\_\_\_\_\_ [1]

- (ii) State what is shown in FIG. 4.2.

\_\_\_\_\_ [1]

**(c) The techniques used in FIG. 4.1 and FIG. 4.2 have different features.**

**Complete the table. Tick (✓) at least ONE box in each row. [5]**

<b>Feature</b>	<b>Technique used in FIG. 4.1</b>	<b>Technique used in FIG. 4.2</b>
<b>Uses reflected waves</b>		
<b>Requires protection for the radiographer</b>		
<b>Can show moving structures</b>		
<b>Can show soft tissues with a higher resolution</b>		
<b>No limit to the number of images a patient can have taken</b>		

- 5 Alex is a technician in a scientific laboratory. One of her jobs is to do tests to identify different chemicals. The tests Alex can use are listed in FIG. 5.1:**

**FIG. 5.1**

<p><b>Adding aqueous sodium hydroxide</b></p> <p><b>Adding aqueous barium chloride</b></p> <p><b>Flame test</b></p> <p><b>Adding hydrochloric acid</b></p> <p><b>Adding aqueous silver nitrate</b></p>
--

- (a) The labels of two bottles, each containing a white powder, are missing. Alex knows that one of the powders is potassium chloride and the other is sodium chloride.**
- (i) Select a suitable test from the list in FIG. 5.1 to enable Alex to identify the white powder in each bottle.**

- (ii) Describe how Alex should do the test selected in (a)(i).

---

---

---

---

[2]

- (iii) State the expected result for each of the chemicals:

Potassium chloride

---

Sodium chloride

---

[2]

- (b) Alex has another bottle containing a white powder.

Alex is not sure whether the powder is potassium bromide or potassium iodide. She uses aqueous silver nitrate to identify the white powder.

- (i) Describe how Alex should do this test.

---

---

---

---

[2]

- (ii) State the expected results for each of the chemicals when using the test described in (b)(i).

Potassium bromide

Potassium iodide

---

[2]

**(c) Alex needs to test another substance to confirm that it is a carbonate.**

**(i) Select the most appropriate test from FIG. 5.1 to confirm that the substance is a carbonate.**

---

**[1]**

**(ii) State the positive result for this test.**

---

**[1]**

**(iii) Describe how Alex can confirm that one of the products of this test is carbon dioxide.**

---

---

**[2]**

- (d) (i) Aluminium nitrate dissolves in water to give a colourless solution.**

**Alex gradually adds aqueous sodium hydroxide to the solution of aluminium nitrate until there is no further change.**

**Describe what Alex would observe.**

---

---

---

**[3]**

- (ii) Iron(II) sulfate dissolves in water to give a pale green solution.

When Alex adds aqueous barium chloride to the solution, a precipitate is formed.

Draw ONE line to connect the colour of the precipitate formed with the correct chemical name of the compound formed. [1]

**Colour of the precipitate formed**

**White**

**Blue**

**Green**

**Chemical name of the compound formed**

**Iron(II)  
hydroxide**

**Iron(II)  
chloride**

**Barium  
sulfate**

**6 Kofi is a researcher using plant tissue cultures.**

**He must use aseptic technique in the laboratory.**

**(a) Explain why aseptic technique is important when creating plant tissue cultures in a laboratory and describe the range of sterilisation techniques available for this purpose. [6]**

---

---

---

---

---

---

---

---

---

---

**(b) Kofi is using the plant tissue cultures to obtain clones.**

**What is the correct definition of a clone?**

**Tick (✓) ONE box. [1]**

**They are all the same size.**

☐

**They are all the same species.**

☐

**They are all genetically engineered.**

☐

**They are all genetically identical.**

☐

(c) FIG. 6.1 shows one of the tissue culture vessels used by Kofi.

Some samples of an African violet plant are seen in the image.

**FIG. 6.1**

**Sample of  
African violet  
plant**

**Tissue culture  
vessel**

**Complete the sentences about  
FIG. 6.1. Use the words.**

**You can use each word once,  
more than once or not at all. [5]**

**contaminated**

**pathogens**

**offices**

**centrifuged**

**explants**

**irrigated**

**environment**

**autoclaved**

**cabinet**

**The problem with the tissue culture vessel in FIG. 6.1 is that it is**
