

**Modified Enlarged 24 pt**  
**OXFORD CAMBRIDGE AND RSA**  
**EXAMINATIONS**

**Monday 23 May 2022 – Morning**

**Level 3 Cambridge Technical in Engineering**

**05822/05823/05824/05825/05873**

**Unit 2: Science for engineering**

**Time allowed: 1 hour 30 minutes plus your additional time allowance**

**You must have:**

**the Formula Booklet for Level 3**

**Cambridge Technical in Engineering**

**(with this document)**

**a ruler (cm/mm)**

**a protractor**

**a scientific calculator**

**Please write clearly in black ink.**

**Centre  
number**

--	--	--	--	--

**Candidate  
number**

--	--	--	--

**First name(s)** \_\_\_\_\_

**Last name** \_\_\_\_\_

**Date of  
birth**

D	D	M	M	Y	Y	Y	Y
---	---	---	---	---	---	---	---

**READ INSTRUCTIONS OVERLEAF**

## **INSTRUCTIONS**

**Use black ink. You can use an HB pencil, but only for graphs and diagrams.**

**Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.**

**Answer ALL the questions.**

**Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.**

**Give your final answers to a degree of accuracy that is appropriate to the context.**

**The acceleration due to gravity is denoted by  $g \text{ m s}^{-2}$ . When a numerical value is needed use  $g = 9.8$  unless a different value is specified in the question.**

**INFORMATION**

**The total mark for this paper is 60.**

**The marks for each question are shown in brackets [ ].**

**ADVICE**

**Read each question carefully before you start your answer.**

**Answer ALL the questions.**

**1 (a) State the SI base units for these quantities.**

**(i) mass**

\_\_\_\_\_ **[1]**

**(ii) temperature**

\_\_\_\_\_ **[1]**

**(iii) amount of substance**

\_\_\_\_\_ **[1]**

(b) An ammeter consistently reads 0.1 A more than the true current flowing through it.

(i) **Circle** the correct term to complete the sentence. [1]

Readings from this ammeter are

\_\_\_\_\_.

absolute

inaccurate

imprecise

relative

(ii) Which of these best describes the action that should be taken?

Tick ONE box. [1]

Apply a  $-0.1$  A absolute correction

Apply a  $+0.1$  A absolute correction

Apply a  $-0.1$  A relative correction

Apply a  $+0.1$  A relative correction

**6**

**(c) Define the term UNCERTAINTY.**

---

---

---

**[2]**

**7**

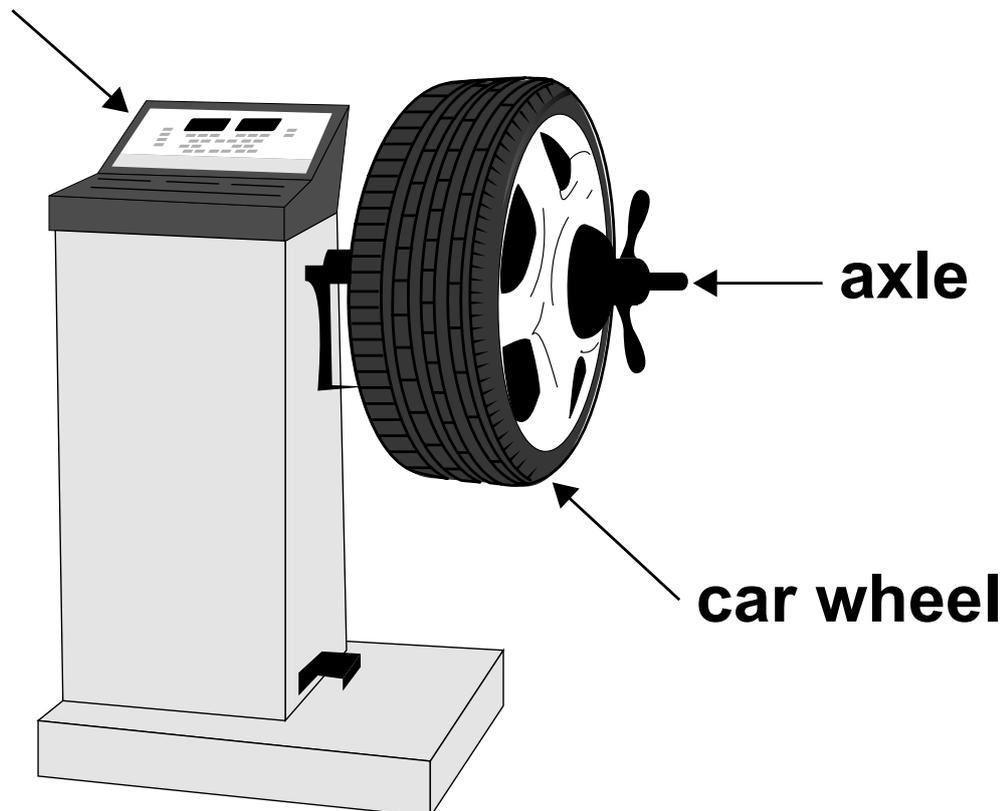

**BLANK PAGE**

- 2 Car wheels need to be balanced to prevent dangerous vibration from happening at certain speeds.

FIG. 1 shows a wheel-balancing machine. The engineer attaches the car wheel to the axle. The machine spins the wheel and the computer displays information.

FIG. 1

computer

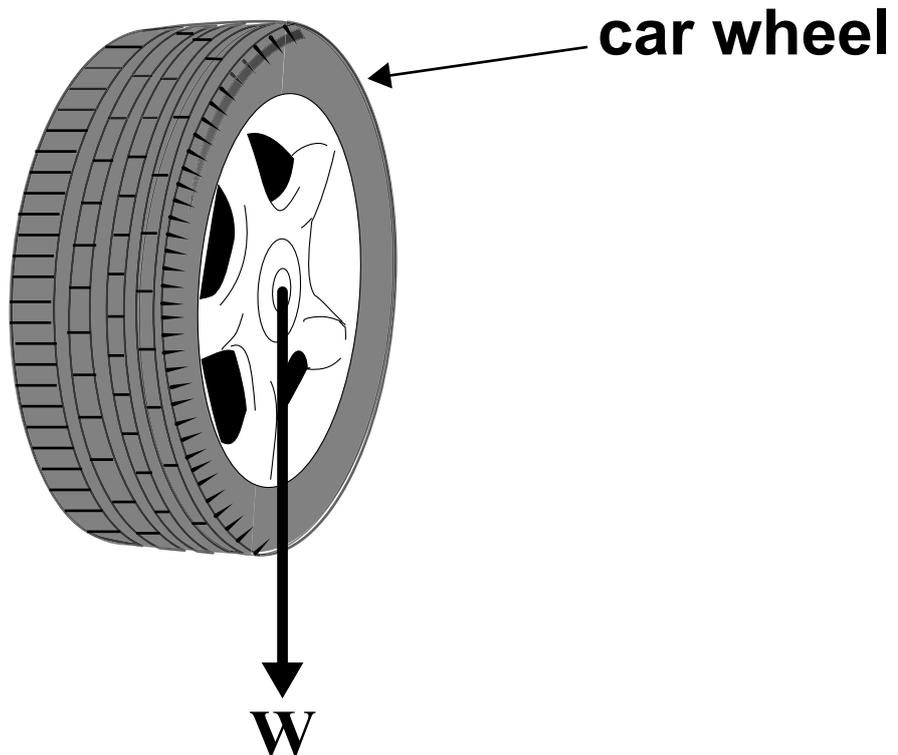

- (a) (i) FIG. 2 shows the wheel stationary on the machine's axle.

The arrow labelled  $W$  represents the weight of the wheel.

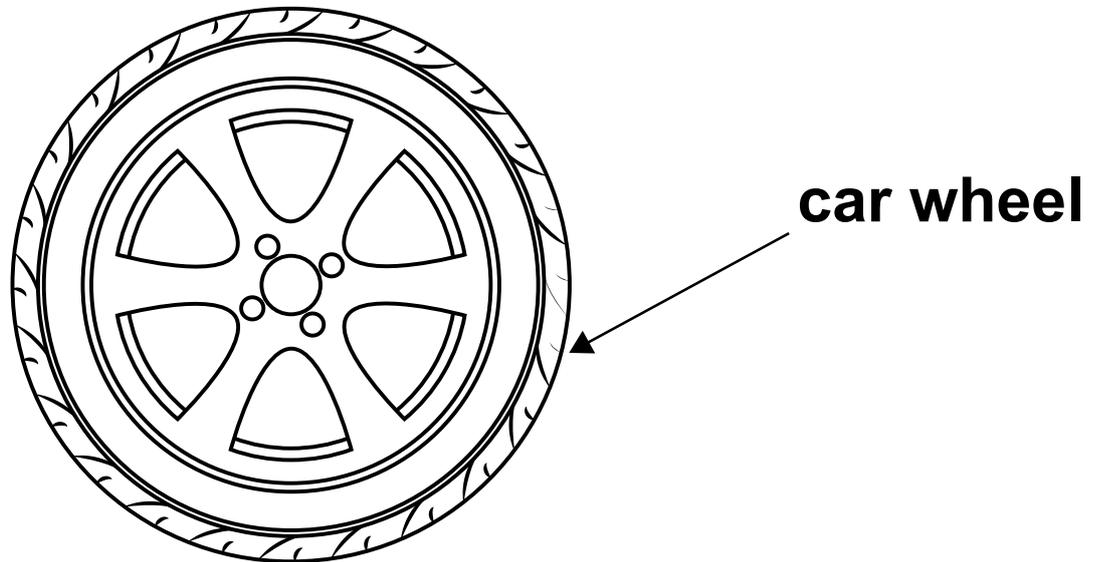

Draw an arrow on FIG. 2 to show the force applied to the wheel by the axle. [2]

FIG. 2

**FIG. 3 shows the wheel on the axle, viewed from the side.**

**FIG. 3**

**When the engineer releases the wheel, it rotates clockwise.**

**(ii) Explain why this shows the wheel is NOT in equilibrium.**

---

---

---

**[2]**

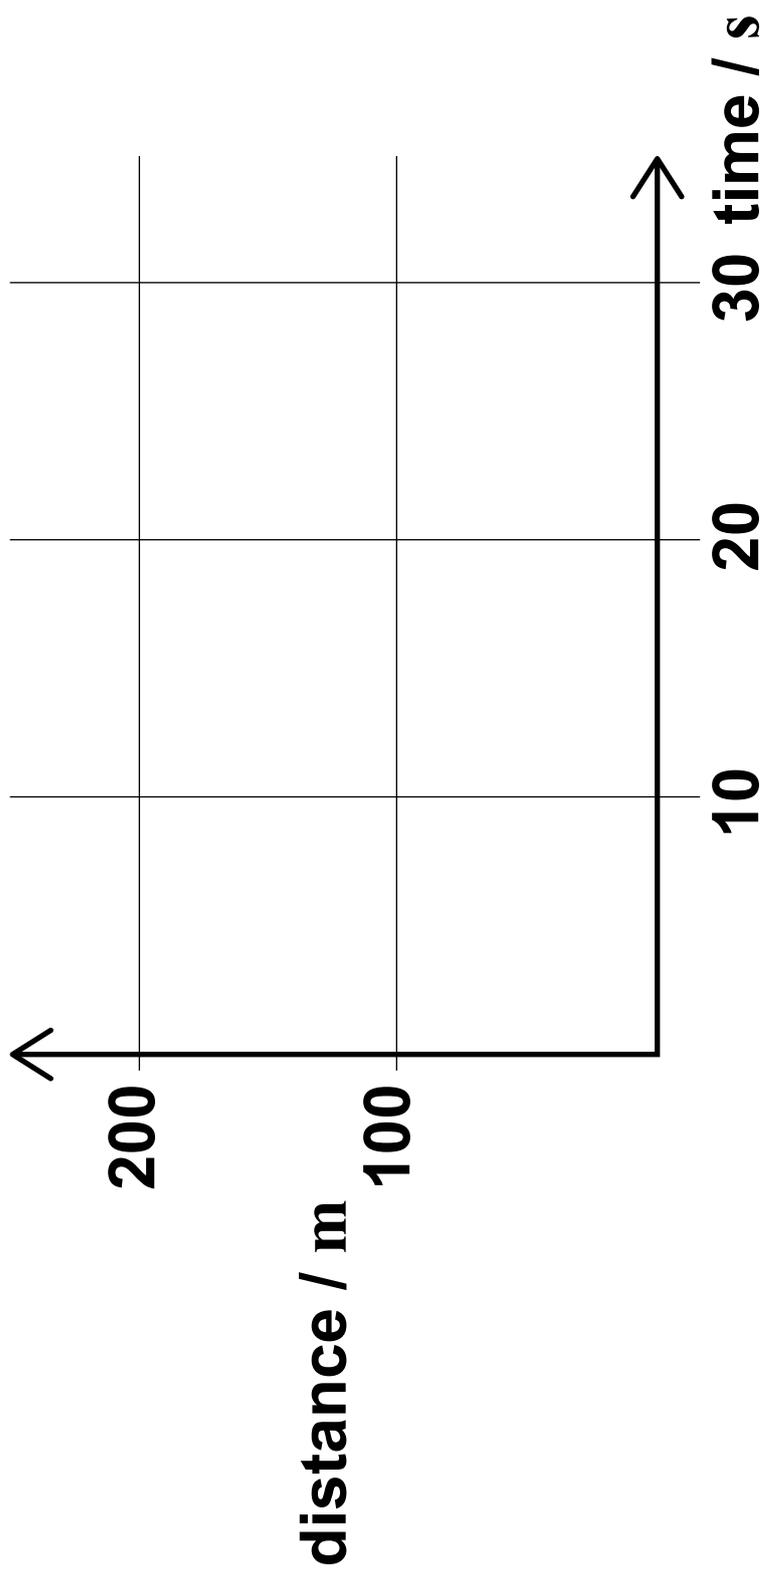

- (iii) The engineer turns the wheel back to its original position and attaches a small weight to balance it.

**Draw an X on FIG. 3 to show approximately where the weight should be added. [1]**

**(b) The owner of the car drives it away from the garage.**

**They drive the car at  $10\text{ m s}^{-1}$  for 20 s and then stop for 10 s.**

**Show this journey on the distance–time axes opposite. [3]**

**(c) The mass of the car is 500 kg.**

**Calculate the kinetic energy of the car when it is travelling at  $10 \text{ m s}^{-1}$ .**

**Give the units for your answer.**

**kinetic energy = \_\_\_\_\_**

**unit \_\_\_\_\_ [3]**

3 (a) **Circle** the correct words to complete the sentence. [1]

Conventional current flows from

\_\_\_\_\_ .

negative to earth

negative to positive

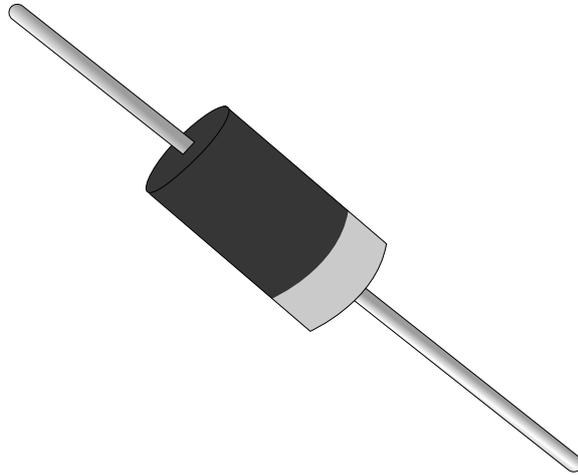

positive to negative

(b) Explain how current flow in a semiconductor may differ from that in a metal.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_ [2]

(c) FIG. 4 shows a semiconductor diode.

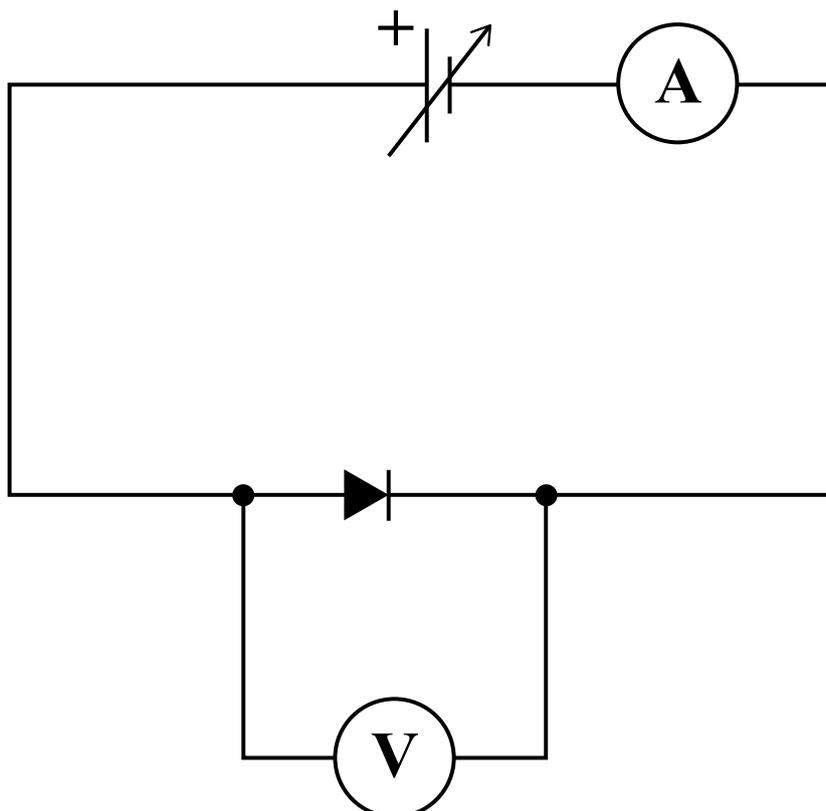

FIG. 4

The diode is connected in a circuit as shown in FIG. 5.

FIG. 5

variable p.d. supply

The current through the diode is measured for different values of applied potential difference.

- (i) Calculate the resistance of the diode when the potential difference across it is  $3.0\text{ V}$  and the current through it is  $0.15\text{ A}$ . Give the units for your answer.

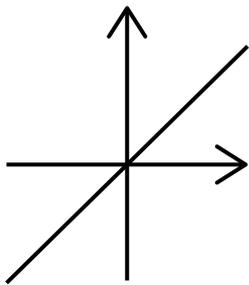

resistance = \_\_\_\_\_

unit \_\_\_\_\_ [3]

(ii) The measurements are plotted on a graph.

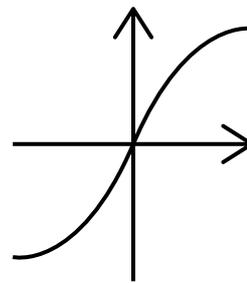

Which of the following shows the current–potential difference characteristic for a semiconductor diode? Tick ONE box. [1]

current

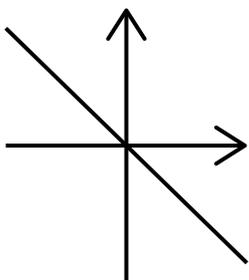

potential difference

current

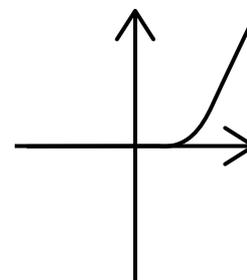

potential difference

current

potential difference

current

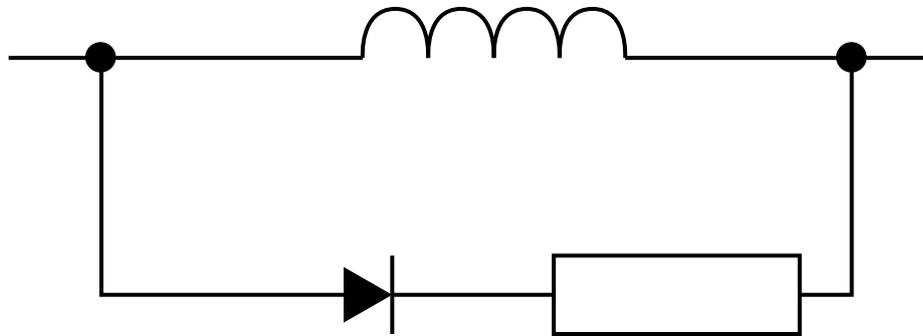

potential difference

**BLANK PAGE**

(d) FIG. 6 shows part of a circuit used to control a motor in a robot.

The motor acts like an inductor and the diode is connected in parallel with it to protect the rest of the circuit from voltage spikes.

**FIG. 6**

The inductor coil is made up of 50 turns.

When the motor is running, the current is 150 mA and the magnetic flux is 1.2 mWb.

- (i) Calculate the self-inductance of the coil in milli-henry.

self-inductance =

\_\_\_\_\_ mH [4]

- (ii) When the motor is turned off, the energy in the magnetic field is dissipated in the resistor.

Show that the power dissipated in the resistor is 3 W if the energy stored in the field is 0.075 J and the time taken is 25 ms. [2]

**4 (a) (i) Define STRESS.**

---

[1]

**(ii) State the unit for stress.**

---

[1]

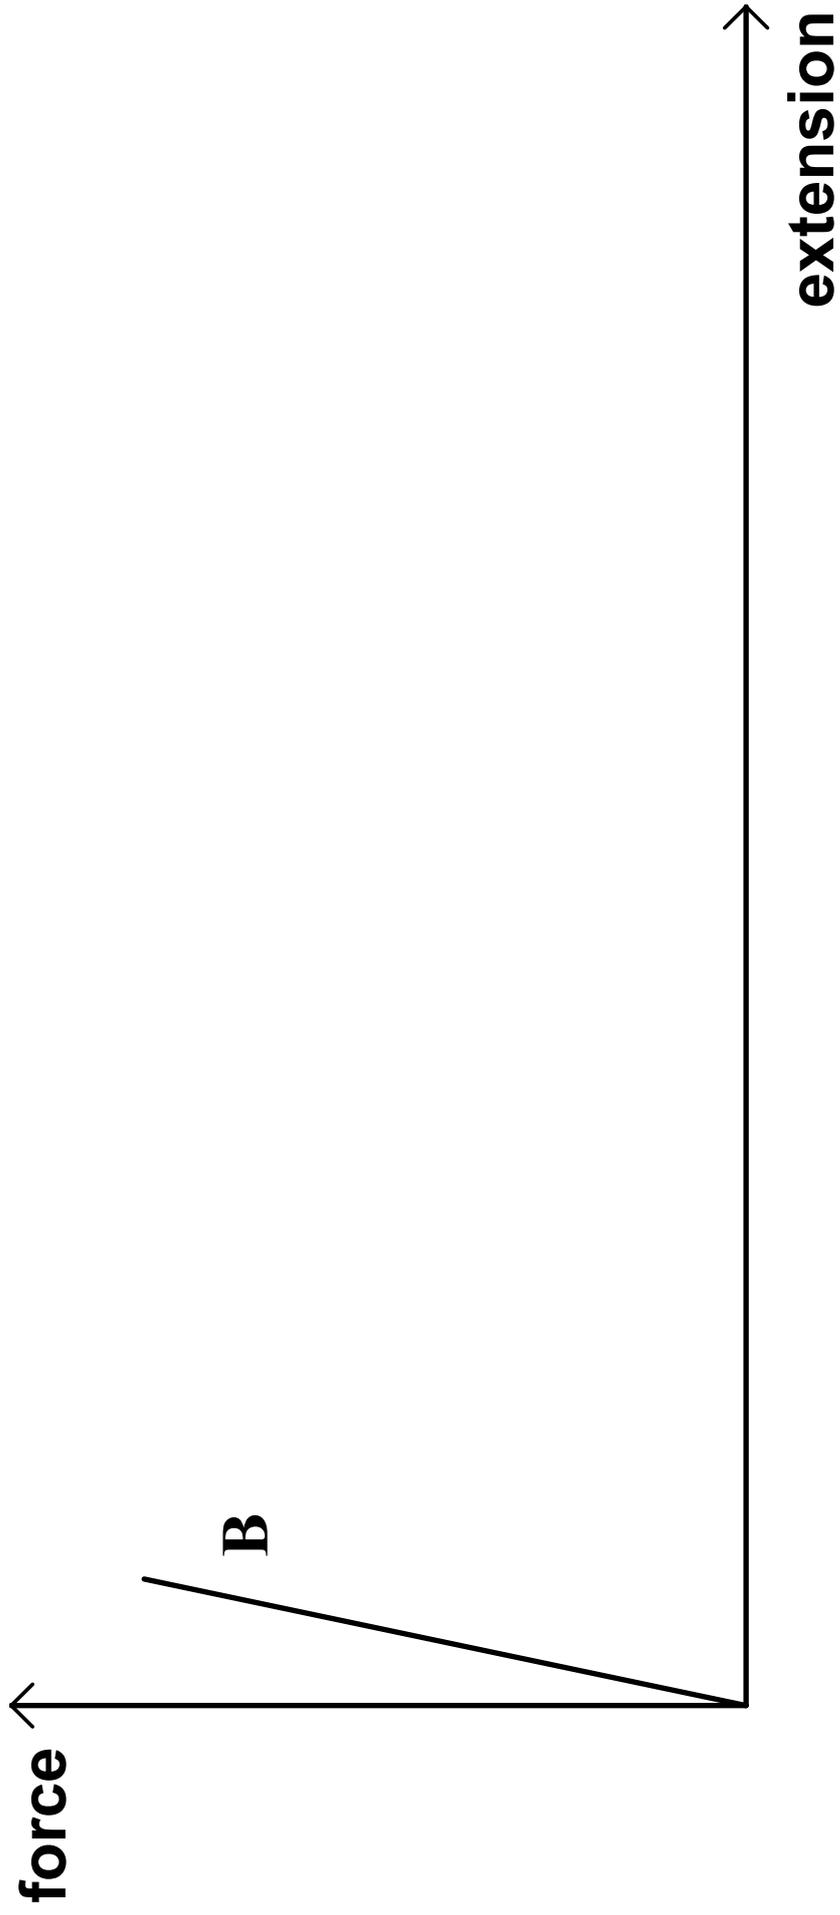

**(b) Give an example of a brittle material.**

---

[1]

**(c) FIG. 7 opposite shows a force–extension graph for a brittle material, labelled B.**

**FIG. 7**

**(i) Draw, on the axes in FIG. 7, a force–extension graph for a ductile material.**

**Label this D. [2]**

**(ii) Draw, on the axes in FIG. 7, a force–extension graph for a non-brittle polymer.**

**Label this P. [2]**

**(d) A small force is applied to a brittle material.**

**The material does not break.**

**Describe what happens to the atoms in the brittle material when this force is removed.**

---

---

---

**[2]**

**(e) Explain the difference between elastic and plastic deformation of a material.**

---

---

---

---

**[2]**

**5 (a) Which of the following is NOT a fluid?**

**Tick ONE box. [1]**

**Gas**

**Liquid**

**Solid**

(b) For safety, divers take a hollow plastic marker buoy to show their position.

(i) FIG. 8 shows a diver holding their marker buoy underwater. FIG. 9 is a close-up of the marker buoy.

FIG. 8

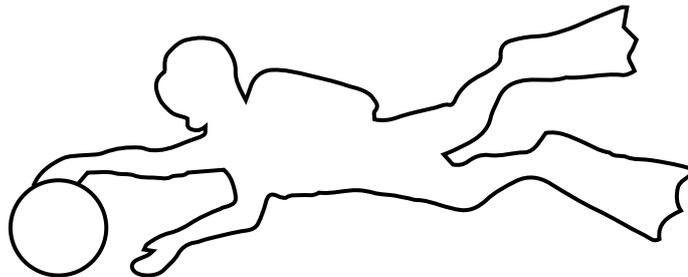

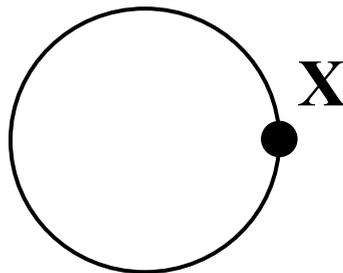

FIG. 9

The marker buoy in FIG. 9 is underwater.

Draw an arrow ON FIG. 9 to show the direction that water pressure acts on the marker buoy at position X. [2]

- (ii) The diver wears a device on their wrist that measures gauge pressure.

Which of the following is the correct way to convert the reading to absolute pressure?

Tick ONE box. [1]

absolute pressure =  
atmospheric pressure – gauge pressure

absolute pressure =  
gauge pressure + atmospheric pressure

absolute pressure =  
gauge pressure – atmospheric pressure

- (iii) The top of the diver's marker buoy is 2.0 m from the surface.

Calculate the pressure on the top of the marker buoy due to the column of water above.

Density of seawater is  $1020 \text{ kg m}^{-3}$ .

pressure = \_\_\_\_\_ Pa [2]

- (iv) **Circle** the correct words to complete the sentence.

The pressure on the bottom of the marker buoy is \_\_\_\_\_

on the top. [1]

less than

more than

the same as

**(c) Describe the upthrust force on an immersed object.**

---

---

---

**[2]**

**6 FIG. 10 opposite shows a type of household central heating boiler that includes a Stirling engine. This type of boiler heats water and also generates electricity.**

**The Stirling engine contains a fixed mass of a working gas (usually helium).**

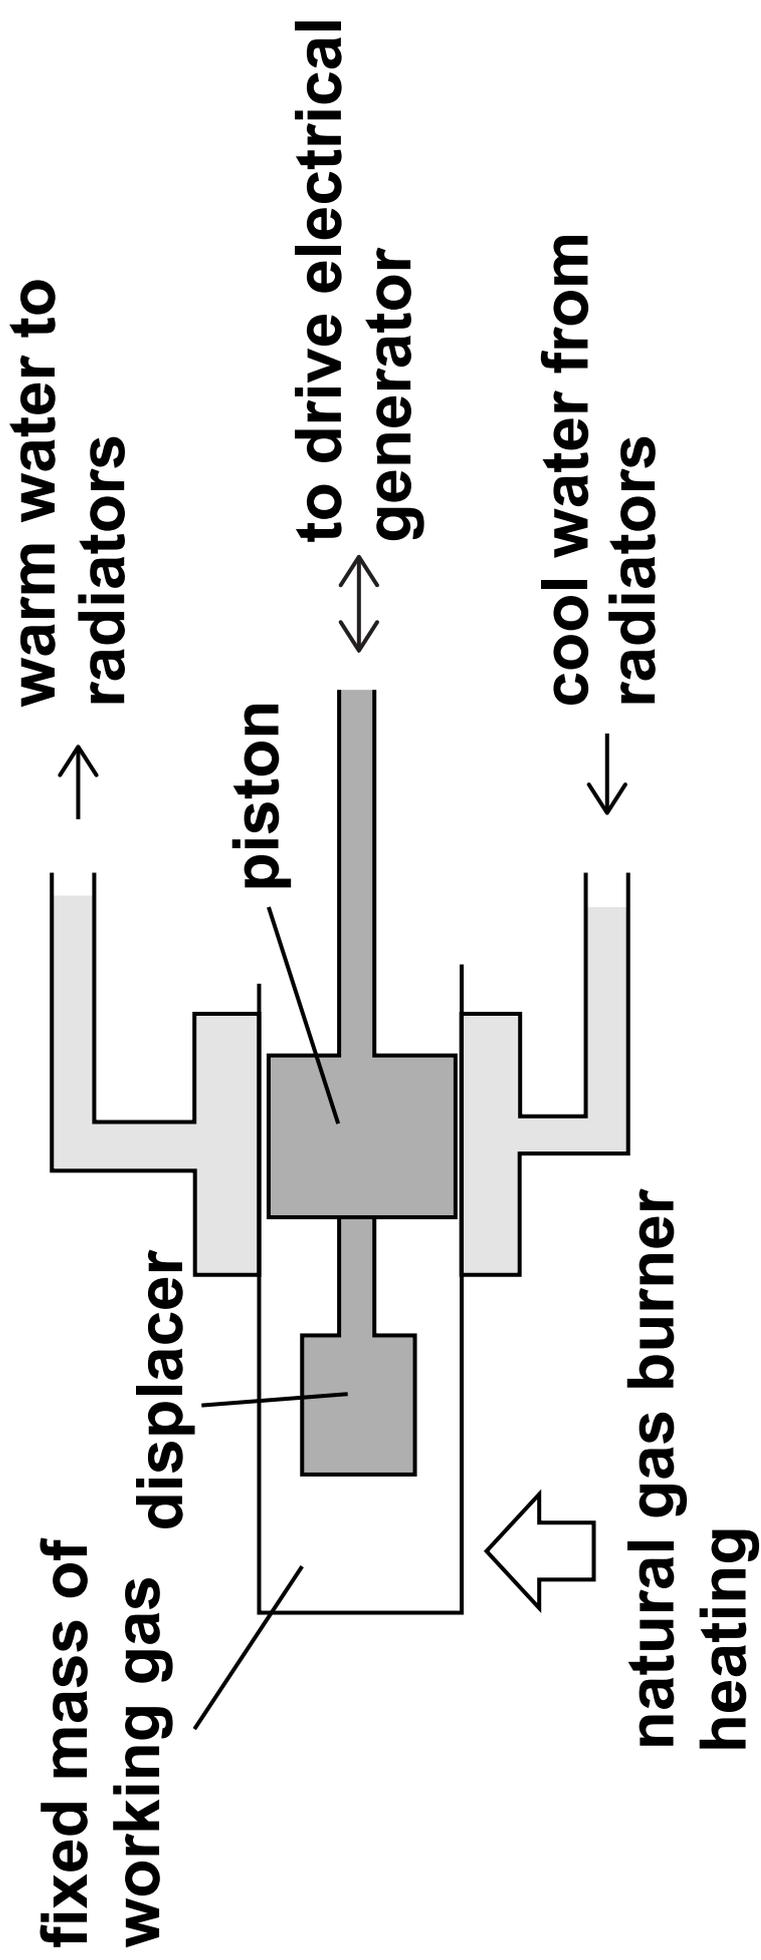

**The boiler burns natural gas to heat the working gas in the Stirling engine.**

**The piston of the Stirling engine drives an electrical generator.**

**The displacer moves the working gas from left to right.**

**Cool water returning from the radiators is heated as it passes over the right-hand side of the Stirling engine before flowing back to the radiators again.**

**FIG. 10**

**(a) (i) State how energy is transferred TO the working gas.**

---

---

[1]

**(ii) State how energy is transferred AWAY FROM the working gas.**

**Give TWO answers.**

1 

---

2 

---

[2]

**(iii) The energy entering the working gas in one cycle of the engine is equal to the energy leaving the working gas.**

**Show that the change in internal energy of the working gas is zero.**

**Use information in section 6.5.1 of the Formula Booklet to help you. [2]**

**(b) A different Stirling engine contains 1.2 g of helium gas at 453 K.**

**(i) Calculate the pressure of the gas when its volume is  $0.006 \text{ m}^3$ . The specific gas constant for helium is  $2.08 \text{ J g}^{-1} \text{ K}^{-1}$ .**

**pressure = \_\_\_\_\_ Pa [3]**

**(ii) What is 453 K in  $^{\circ}\text{C}$ ?**

**\_\_\_\_\_ [1]**
