AG : AGRICULTURAL ENGINEERING

Duration: Three Hours

Maximum Marks: 100

Read the following instructions carefully.

- 1. Write your name and registration number in the space provided at the bottom of this page.
- 2. Take out the Optical Response Sheet (ORS) from this Question Booklet without breaking the seal.
- 3. Do not open the seal of the Question Booklet until you are asked to do so by the invigilator.
- 4. Write your registration number, your name and name of the examination centre at the specified locations on the right half of the **ORS**. Also, using HB pencil, darken the appropriate bubble under each digit of your registration number and the letters corresponding to your test paper code (AG).
- 5. This Question Booklet contains 16 pages including blank pages for rough work. After opening the seal at the specified time, please check all pages and report discrepancy, if any.
- 6. There are a total of 65 questions carrying 100 marks. All these questions are of objective type. Questions must be answered on the left hand side of the **ORS** by darkening the appropriate bubble (marked A, B, C, D) using HB pencil against the question number. For each question darken the bubble of the correct answer. In case you wish to change an answer, erase the old answer completely. More than one answer bubbled against a question will be treated as an incorrect response.
- 7. Questions Q.1 Q.25 carry 1-mark each, and questions Q.26 Q.55 carry 2-marks each.
- 8. Questions Q.48 Q.51 (2 pairs) are common data questions and question pairs (Q.52, Q.53) and (Q.54, Q.55) are linked answer questions. The answer to the second question of the linked answer questions depends on the answer to the first question of the pair. If the first question in the linked pair is wrongly answered or is unattempted, then the answer to the second question in the pair will not be evaluated.
- Questions Q.56 Q.65 belong to General Aptitude (GA). Questions Q.56 Q.60 carry 1-mark each, and questions Q.61 – Q.65 carry 2-marks each. The GA questions begin on a fresh page starting from page 9.
- 10. Unattempted questions will result in zero mark and wrong answers will result in NEGATIVE marks. For Q.1 – Q.25 and Q.56 – Q.60, ¹/₃ mark will be deducted for each wrong answer. For Q.26 – Q.51 and Q.61 – Q.65, ¹/₃ mark will be deducted for each wrong answer. The question pairs (Q.52, Q.53), and (Q.54, Q.55) are questions with linked answers. There will be negative marks only for wrong answer to the first question of the linked answer question pair, i.e. for Q.52 and Q.54, ²/₃ mark will be deducted for each wrong answer. There is no negative marking for Q.53 and Q.55.
- 11. Calculator is allowed whereas charts, graph sheets or tables are NOT allowed in the examination hall.
- 12. Rough work can be done on the question paper itself. Additionally, blank pages are provided at the end of the question paper for rough work.

2011

				THAT
2011				CITE
Q. 1	- Q. 25 carry one n	ark each.		Se .
Q.1	The differential equal $2\frac{d^2z}{dx^2} + \frac{dz}{dx} + 3y = st$	tion $m x$ is considered to be	ordinary, as it has	24.6
	(A) one dependent va (C) one independent	riable variable	(B) more than one de(D) more than one ind	pendent variable dependent variable
Q.2	A square matrix [A] and N th column of the	will be lower triangular matrix)	r if and only if $(a_{MN} repr$	resents an element of M th row
	(A) $a_{MN} = 0$, N>M	(B) $a_{MN} = 0$, M>N	(C) $a_{MN} \neq 0$, M>N	(D) $a_{MN} \neq 0$, N>M
Q.3	The metering mechan When forward speed	nism of a seed drill is d of the seed drill is incre	riven by the ground what ased from 3.0 to 3.45 km	eels at a velocity ratio of 1:2. h^{-1} , the seed rate would
	(A) increase by 15%(C) decrease by 15%		(B) decrease by 13%(D) remain the same	
Q.4	A maize planter drops to row spacing is 0.25	s seeds at 0.20 m interva m, the seed rate in kg h	al. The seed weight is 20 na ⁻¹ is	0 g per 1000 seeds. If the row
	(A) 5	(B) 10	(C) 20	(D) 40
Q.5	Which one of the folle	owing is NOT a towed	wheel?	
	(A) wheels of power t(C) wheels of bullock	iller cart	(B) front wheels of tw(D) wheels of trailer	vo wheel drive tractor
Q.6	If the density of a flui	d changes from point to	point in a flow region, the	he flow is called
	(A) steady flow (C) non-uniform flow		(B) unsteady flow(D) compressible flow	
Q.7	Capillary water is held	l in the soil due to		
	(A) absorption force(C) gravitational force	1. 1	(B) surface tension for(D) osmotic force	rce
Q.8	The wedge storage in	a river reach during the	passage of a flood wave	is
	(A) positive during ris(B) negative during ris(C) positive during fal(D) constant	ing phase ing phase ling phase		
Q.9	The viscosity of a new X and Y are	tonian fluid depends pri	imarily on X and to a less	ser degree on Y.
	(A) X = temperature, Y (B) X = flow velocity, (C) X = temperature, Y (D) X = roughness of t	' = flow velocity Y = pressure ' = pressure he surface across which	the fluid flows, $Y = $ flow	w velocity

2011 Milk is agitated in a tank with a rotating impeller. For this system: Q.10

Let
$$X = \frac{P}{\rho N^3 D^5}$$
, $Y = \frac{D^2 N \rho}{\mu}$, $Z = \frac{D N^2}{g}$

StudentBounts.com where, P = power imparted by the impeller to the fluid, N = rate of rotation of the impeller, D = impeller diameter, g = acceleration due to gravity, ρ = fluid density, and μ = fluid viscosity. The X, Y, Z are

(A) $V = Grashof number$	Y = Power number,	Z = Reynolds number
(A) $A = \text{Orashor number}$,	V - Peynolds number	Z = Froude number
(B) $X =$ Power number,	I = Reynolds humber,	7 Creshof number
(C) $X =$ Reynolds number,	Y = Froude number,	Z = Grashor humber
(D) $X =$ Froude number,	Y = Grashof number,	Z = Power number

Q.11

The highest order of polynomial integrand for which Simpson's 1/3 rule of integration is exact is (D) fourth (C) third (B) second (A) first

The mean value of a function f(x) from x = a to x = b is given by Q.12

(A)
$$\frac{f(a)+f(b)}{2}$$

(B) $\frac{f(a)+2f\left(\frac{a+b}{2}\right)+f(b)}{4}$
(C) $\int_{a}^{b} f(x)dx$
(D) $\frac{\int_{a}^{b} f(x)dx}{(b-a)}$

Q.13 A statistical measure of the variability of a distribution around its mean is referred to as

(A) coefficient of determination	(B) standard error
(C) coefficient of variation	(D) standard deviation

An engine is to be run in dual fuel mode using diesel and producer gas with diesel as pilot fuel. 0.14 Operation NOT required while running the engine is

(A) cooling of the producer gas	(B) cleaning of the producer gas
(C) preheating of the producer gas	(D) mixing of producer gas with air

The range of frequency of vertical vibration of tractor most harmful to the operator's body at a root Q.15 mean square acceleration of 1.0 m s⁻² in Hertz is

(A) 0.4 = 0.0 (D) 4.0 0.0	(A) 0.4 - 0.8	(B) 4.0 – 8.0	(C) 400 – 800	(D) 4000 – 8000
---------------------------	---------------	---------------	---------------	-----------------

The Sauter mean diameter of liquid droplets of a hydraulic spray is Q.16

(A) median diameter of droplets	(B) surface area of droplets
(C) mean diameter of droplets	(D) volume to surface ratio of droplets

A horizontal axis windmill having 8 blades is used for pumping water. Each blade has a tip radius Q.17 of 1.0 m and a mean chord of 0.1 m. Assuming blade length equal to tip radius, solidity of the windmill is

(4)003	(B) 0.10	(C) 0.25	(D) 0.8
(A) 0.03	(B) 0.10	(C) 0.25	(D) 0

A completely saturated clay soil has particle density of 2600 kg m⁻³ and bulk density of O.18 1400 kg m⁻³. It has a moisture fraction of 40% on volume basis. The porosity of the soil is

(A) 0.46	(B) 0.54	(C) 0.74	(D) 0.86

- StudentBounty.com The magnetic bearing of a line at a station point is found to be 182°. The magnetic declination Q.19 the station is 3° E and the local attraction is -1° for correction. The true bearing of the line is
 - (A) 186° (B) 184° (C) 180° (D) 178°
- In wind erosion process, the rate of soil movement (S) depends on wind speed (v), threshold limit of Q.20 wind speed required to move the soil (v_m) and average soil particle size (d). This interrelationship is expressed as

(A)
$$S \propto (v - v_m)^2 d^{1/2}$$

(B) $S \propto (v - v_m)^2 d$
(C) $S \propto (v - v_m)^3 d^{1/2}$
(B) $S \propto (v - v_m)^2 d$
(D) $S \propto (v - v_m)^3 d$

For a catchment with an area of 400 km², the equivalent discharge of the S-curve obtained by Q.21 summation of 4-h unit hydrograph in m³ s⁻¹ is

A material having thermal conductivity k insulates a spherical object of diameter d. The heat Q.22 transfer coefficient between the insulating material and the environment is h_o . The critical thickness of insulation for maximum heat transfer rate is

(A)
$$\frac{k}{2h_o} - \frac{d}{2}$$
 (B) $\frac{2k}{h_o} - \frac{d}{2}$ (C) $\frac{k}{2h_o} - d$ (D) $\frac{2k}{h_o} - d$

- For a mass of grain stored in a bin, the angle of internal friction of the grain is 30°. The ratio of Q.23 normal pressure to the applied pressure within the bin is
 - (A) 0.25 (B) 0.33 (C) 0.50 (D) 1.00
- In a counter current concentric tube heat exchanger, the hot fluid enters at 360 K and leaves at Q.24 340 K. The cooling fluid enters at 300 K and leaves at 316 K. The logarithmic mean temperature difference in K is
 - (A) 17.9 (B) 39.2 (C) 41.9 (D) 57.3
- A constant heat flux of 500 W m⁻² is supplied to one face of a food material having a plate Q.25 like structure with a thickness of 10 mm. The thermal conductivity of the food material is 1.5 W m⁻¹ °C⁻¹. From the other face of the food material, heat is dissipated by convection into a fluid of 40 °C temperature. The heat transfer coefficient of the fluid is 100 W m⁻² °C⁻¹. The temperature in °C of the surface to which the heat flux is supplied will be
 - (A) 43.3 (B) 45.3 (C) 48.3 (D) 54.3

Q. 26 to Q. 55 carry two marks each.

Q.26 The stationary points of

7

$$f(x, y) = \frac{1}{3}x^3 - xy^2 - 2y \text{ are}$$
(A) (1,-1) and (-1,1) (B) (1,1) and (-1,-1) (C) (2,-2) and (-2,2) (D) (2,2) and (-2,-2)

The divergence of the vector $\mathbf{F} = \sin(xy)\mathbf{i} + y \cos(z)\mathbf{j} + xz \cos(z)\mathbf{k}$ (i, j and k represent unit Q.27 vectors along the three orthogonal axes) at x = y = 0 is

(A) sin(z)(B) $\cos(z)$ (C) $-\sin(z)$ (D) $-\cos(z)$

StudentBounty.com The following figure presents the hyetograph for a 3-hour storm. The surface runoff for the event Q.38 estimated to be 38 mm. The phi – index for the event in mm h^{-1} is

Q.39 A crop grown over an area of 50 ha can tolerate 5 decisiemens m⁻¹ of electrical conductivity in the drainage water. The consumptive use of the crop is 1.0 m, 30% of which is obtained from the rainfall and the remainder is met from the irrigation water having electrical conductivity of 2 decisiemens m⁻¹. For efficient crop production, the leaching requirement and the quantity of water that must be drained from the area are

(A) 40% and 0.23 Mm ³	(B) 60% and 0.23 Mm ³
(C) 40% and 0.21 Mm ³	(D) 60% and 0.21 Mm ³

0.40 A fully penetrating tubewell of 0.2 m diameter is operational in a confined aquifer of 20 m thickness. The hydraulic conductivity of the formation (K) is 20 m per day and the radius of influence is 1000 m. Water table is 50 m above the bottom of screen and the maximum drawdown is 10 m. Subsequently two more tubewells of the same size are installed in such a way that the three tubewells form an equilateral triangle of side 300 m. All three tubewells have equal discharge when operated independently. If all tubewells are operated simultaneously, the percent loss in the discharge of the first well is

(A) 20.73	(B) 35.75	(C) 48.85	(D) 61.90

For the eastern Himalayan region having hill slope of 16%, a bench terrace system is to be Q.41 designed. It is found that the depth of cut for constructing the bench terrace cannot be more than 0.40 m due to the limitation of the soil depth. If a batter slope of $\frac{1}{2}$: 1 is proposed, the maximum possible width of the terrace and the required earthwork per hectare (assuming cut equal to fill) will be

(A) 3.4 m, 680 m ³	(B) 4.6 m, 920 m^3	
(C) 4.8 m, 960 m ³	(D) 5.0 m, 1000 m ³	

- The sieve analysis of a finely ground rice powder is represented by a straight line from zero percent 0.42 mass at 1 µm particle size to 100 percent mass at 101 µm particle size. The volume-surface mean diameter in µm is
 - (A) 14.6 (B) 19.2 (C) 21.7 (D) 25.3
- A plate shaped frozen food has a thickness of 20 mm, average thermal conductivity of 2.58 W m⁻¹ °C⁻¹, 0.43 density of 1080 kg m⁻³, specific heat of 3550 J kg⁻¹ °C⁻¹, and a uniform temperature of -20 °C. The food material is suddenly immersed in a well stirred hot water maintained at a constant temperature of 90 °C. The heat transfer coefficient between the food material and hot water is 25 W m⁻² °C⁻¹. The time required for the centre temperature of the food material to reach 30 °C in minutes is

(A) 5.9 (B) 7.9 (C) 15.5 (A)	D) 31 0
---------------------------------	---------

2011

StudentBounty.com 300 kg of parboiled and wet paddy having an initial moisture content of 28% (dry basis) was in a batch type dryer. During drying operation, grain sample was drawn at regular time intervals 0.44 measure its moisture content (dry basis). It was found that the moisture content of the grain borne a linear relationship with drying time till 30 minutes of drying operation at which moisture content was measured to be 20%. The drying rate (kg h⁻¹) during this interval was

(D) 48.1 (C) 41.7 (B) 37.5 (A) 22.3

A mixture of microorganisms, P, Q, R, and S are to be inactivated by autoclaving. Number of spores of the above organisms is 6×10^5 , 4×10^6 , 2×10^4 , and 9×10^5 respectively. Further, their 0.45 decimal reduction time (D) values in minute are 2.2, 1.8, 0.8, and 1.6 respectively. It is desired to microbiologically inactivate the mixture at 121 °C to obtain a probability of spoilage of 10000⁻¹. The microorganisms that will be inactivated first and that at the last are respectively

(D) P and R (C) P and S (B) R and P (A) P and Q

The average interstitial velocity in a packed bed is 2.5 m s^{-1} and the superficial velocity under minimum fluidized condition based on the cross-section of the empty container is 1 m s⁻¹. Solid 0.46 particles having density of 1200 kg m⁻³ and size of 0.15 mm are to be fluidized using air at 3 atm absolute pressure and 30 °C temperature having a density of 3.5 kg m⁻³. The empty bed cross section is 0.4 m² and the bed contains 400 kg of solid. Pressure drop at minimum fluidized condition in Pa is

(D) 17.1×10^3 (C) 9.7×10^3 (B) 6.5×10^3 (A) 3.5×10^3

Sphericity of a particle is defined as: (surface to volume ratio for a sphere having identical volume as that of the particle) / (the surface to volume ratio of the particle). The measure of sphericity of a 0.47 cube shaped sugar crystal is

(A) $\left(\frac{\pi}{6}\right)^{\frac{1}{3}}$ (B) $\left(\frac{\pi}{6}\right)^{\frac{2}{3}}$ (C) $\left(\frac{\pi}{4}\right)^{\frac{1}{3}}$ (D) $\left(\frac{\pi}{4}\right)^{\frac{2}{3}}$

Common Data Questions

Common Data for Questions 48 and 49:

A 5 ha field under wheat crop is irrigated at 40% depletion of available moisture content. The field capacity, wilting point and bulk density of the soil in the field are 32% (on weight basis), 20% (on weight basis) and 1400 kg m⁻³ respectively. To irrigate the field in a day of 10 hours, a pump is used which lifts 270 m³ of water per hour against a total head of 20 m.

- If the root zone depth is 0.8 m, the volume of water required to irrigate the field in m³ will be 0.48
 - (D) 4050 (C) 3600 (B) 3150 (A) 2700
- The pump is driven by an electric motor. If the pump, drive and motor efficiencies are 80%, 82% 0.49 and 90% respectively, the required size of electric motor in horse-power will be
 - (D) 33.5 (C) 30.0 (B) 24.5 (A) 20.0

2011

Common Data for Questions 50 and 51:

StudentBounty.com A vertical hydraulic cylinder having an inside diameter of 100 mm is used in a hoist for lifting load. A constant flow rate pump capable of delivering 12 litre per minute at a maximum pressure of 18 MPa is used for supplying the fluid. Volumetric and mechanical efficiencies of the pump are 91% and 85% respectively.

The rate of lifting of load in m s⁻¹ and maximum amount of load that can be lifted in kN are Q.50

Q.51	(A) 0.020, 180	(B) 0.025, 141	(C) 0.064, 45	(D) 0.080, 565
	The size of motor required for operating the pump in kW is			
	(A) 3.60	(B) 3.96	(C) 4.24	(D) 4.65

Linked Answer Questions

Statement for Linked Answer Questions 52 and 53:

A towed pneumatic wheel (width to diameter ratio of 0.3) is to be rolled on a leveled concrete surface. Total wheel load is 2000 N.

The force in N required to roll the wheel on the horizontal concrete surface would be Q.52

(A) 80	(B) 91	(C) 800	(D) 012
		(0)000	(1) (4)

The minimum slope in degrees of the concrete surface with respect to the horizontal at which the 0.53 wheel itself will start rolling downward is

(A) 2.29 (B) 5.28 (C) 23.58 (D) 27.13

Statement for Linked Answer Questions 54 and 55:

A vegetable with 70% moisture (wet basis) is to be dried in a countercurrent dryer to give a product with 5% moisture (wet basis). The feed rate to the dryer is 0.15 kg s⁻¹. The drying medium consists of air at 100 °C containing water vapour with a partial pressure of 1.0 kPa. The air leaves the dryer at 40 °C and is 70% saturated. The system works under a total pressure of 101.3 kPa. The vapour pressure of water that saturates air at 40 °C is 7.4 kPa. Molecular weight of water and air may be taken as 18 and 29 respectively.

Q.54 The humidity (kg of water vapour / kg of dry air) of the outlet air is

	(A) 0.0027	(B) 0.0172	(C) 0.0335	(D) 0.0483
Q.55	The flow rate (kg	s ⁻¹) of inlet air required	is	
	(A) 0.161	(B) 0.817	(C) 1.634	(D) 3 783

General Aptitude (GA) Questions

O. 56 - Q. 60 carry one mark each.

StudentBounts.com Choose the most appropriate word from the options given below to complete the following Q.56 sentence:

Under ethical guidelines recently adopted by the Indian Medical Association, human genes - treatments are are to be manipulated only to correct diseases for which unsatisfactory.

- (A) similar
- (B) most
- (C) uncommon
- (D) available
- Choose the word from the options given below that is most nearly opposite in meaning to the given Q.57 word:

Frequency

- (A) periodicity
- (B) rarity
- (C) gradualness
- (D) persistency
- Choose the most appropriate word from the options given below to complete the following Q.58 sentence:

 by foreign technocrats, It was her view that the country's problems had been so that to invite them to come back would be counter-productive.

- (A) identified (B) ascertained (C) exacerbated (D) analysed
- There are two candidates P and Q in an election. During the campaign, 40% of the voters promised 0.59 to vote for P, and rest for Q. However, on the day of election 15% of the voters went back on their promise to vote for P and instead voted for Q. 25% of the voters went back on their promise to vote for Q and instead voted for P. Suppose, P lost by 2 votes, then what was the total number of voters?

(C) 90 (B) 110 (A) 100

The question below consists of a pair of related words followed by four pairs of words. Select the Q.60 pair that best expresses the relation in the original pair:

(D) 95

- **Gladiator** : Arena
- (A) dancer : stage
- (B) commuter : train
- (C) teacher : classroom
- (D) lawyer : courtroom

O. 61 to Q. 65 carry two marks each.

- The sum of n terms of the series 4+44+444+.... is Q.61
 - (A) $(4/81) [10^{n+1} 9n 1]$ (B) $(4/81) [10^{n-1} 9n 1]$ (C) $(4/81) [10^{n+1} - 9n - 10]$ (D) $(4/81) [10^{n} - 9n - 10]$

StudentBounty.com Given that f(y) = |y| / y, and q is any non-zero real number, the value of |f(q) - f(-q)| is Q.62 (A) 0 (B) - 1(C) 1 (D) 2

- Three friends, R, S and T shared toffee from a bowl. R took 1/3rd of the toffees, but returned four to Q.63 the bowl. S took 1/4th of what was left but returned three toffees to the bowl. T took half of the remainder but returned two back into the bowl. If the bowl had 17 toffees left, how many toffees were originally there in the bowl?
 - (A) 38 (B) 31 (C) 48 (D) 41
- The fuel consumed by a motorcycle during a journey while traveling at various speeds is indicated 0.64 in the graph below.

The distances covered during four laps of the journey are listed in the table below

Lap	Distance (kilometres)	Average speed (kilometres per hour)	
Р	15	15	
Q	75	45	
R	40	75	
S	10	10	

From the given data, we can conclude that the fuel consumed per kilometre was least during the lap

(A) P (B) O (C) R (D) S

The horse has played a little known but very important role in the field of medicine. Horses 0.65 were injected with toxins of diseases until their blood built up immunities. Then a serum was made from their blood. Serums to fight with diphtheria and tetanus were developed this way.

It can be inferred from the passage, that horses were

(A) given immunity to diseases

- (B) generally quite immune to diseases
- (C) given medicines to fight toxins
- (D) given diphtheria and tetanus serums
