

General Certificate of Secondary Education
2014

GCSE Biology

Unit 1

Higher Tier

[GBY12]

FRIDAY 6 JUNE, AFTERNOON

**MARK
SCHEME**

General Marking Instructions

Introduction

Mark schemes are published to assist teachers and students in their preparation for examinations. Through the mark schemes teachers and students will be able to see what examiners are looking for in response to questions and exactly where the marks have been awarded. The publishing of the mark schemes may help to show that examiners are not concerned about finding out what a student does not know but rather with rewarding students for what they do know.

The Purpose of Mark Schemes

Examination papers are set and revised by teams of examiners and revisers appointed by the Council. The teams of examiners and revisers include experienced teachers who are familiar with the level and standards expected of students in schools and colleges.

The job of the examiners is to set the questions and the mark schemes; and the job of the revisers is to review the questions and mark schemes commenting on a large range of issues about which they must be satisfied before the question papers and mark schemes are finalised.

The questions and the mark schemes are developed in association with each other so that the issues of differentiation and positive achievement can be addressed right from the start. Mark schemes, therefore, are regarded as part of an integral process which begins with the setting of questions and ends with the marking of the examination.

The main purpose of the mark scheme is to provide a uniform basis for the marking process so that all the markers are following exactly the same instructions and making the same judgements in so far as this is possible. Before marking begins a standardising meeting is held where all the markers are briefed using the mark scheme and samples of the students' work in the form of scripts. Consideration is also given at this stage to any comments on the operational papers received from teachers and their organisations. During this meeting, and up to and including the end of the marking, there is provision for amendments to be made to the mark scheme. What is published represents this final form of the mark scheme.

It is important to recognise that in some cases there may well be other correct responses which are equally acceptable to those published: the mark scheme can only cover those responses which emerged in the examination. There may also be instances where certain judgements may have to be left to the experience of the examiner, for example, where there is no absolute correct response – all teachers will be familiar with making such judgements.

				AVAILABLE MARKS
1	(a) A – Trachea; B – Rib;	[1] [1]		
	(b) Breathe in – diaphragm contracts/flattens Breathe out – diaphragm relaxes/moves up/dome shaped;	[1] [1]	[2]	4
2	(a) A – Iris; B – Pupil;	[1] [1]		
	(b) (i) B/pupil larger/increased diameter; (ii) More light enters eye; So image can be formed/seen (on retina);	[1] [1]	[2]	5
3	(a) As the distance (from the centre) increases, the concentration of SO ₂ decreases;	[1]		
	(b) At between 0 < 2 km/SO ₂ equal to 68 < 73 au; Credit: correct distance/ SO ₂ conc Average number of lichen species 0.3 (\pm 0.1); Reject: 2/3 (must have decimal place) Between 0 and 2 km;	[2]		
	(c) Burning fossil fuels/petrol/diesel (in vehicles);	[1]		
	(d) Indicator (species);	[1]		5
4	(a) $0.10 - 0.09 = 0.01$ $(0.01 \times 100) \div 0.10 = 10\%$;	[1] [1]	[2]	
	(b) Red/Lamb's lettuce; (Red) Loses no vitamin C/(Lamb's) has largest amount of vitamin C left;	[1] [1]	[2]	
	(c) (i) $(20 \div 100) \times 60 = 12$; (ii) 12/50 or 24%; ECF	[1] [1]		6

		AVAILABLE MARKS
5	(a) Any two from: Description: A activity decreases while B increases and decreases; Activity: B maximum activity lower than A; Rate: B faster decrease than A; Range: B has narrower range of activity/B fully denatured; Optimum temperature: B higher optimum temperature;	[2]
	(b) 20 °C; (Less cost) for electricity/less energy needed heating water when using a biological washing powder;	[2]
	(c) Breakdown of large/complex/insoluble molecules or makes small/simple/soluble molecules; so they can pass through the wall of the intestine (capillary)/into the blood;	[2]
	(d) Speed up reactions (without being changed themselves);	[1] 7
6	(a) (i) A – Nucleus; B – Cytoplasm;	[1] [1] [2]
	(ii) Protocista;	[1]
	(b) Any three from: Amoeba changes shape/moves towards food; Surrounds/engulfs food; Food inside food vacuole; Food digested/broken down in (vacuole); Phagocytosis;	[3]
	(c) Plant – Chloroplasts; Animal – Cell wall absent/flagellum for movement;	[2] 8

		AVAILABLE MARKS
7	(a) Any three from: Absorbs more glucose from blood/lowers blood glucose concentration; Converts glucose to glycogen/fat; Storage; Glucose respired;	[3]
	(b) (i) 5.5 mmol per litre;	[1]
	(ii) Increases;	[1]
	(iii) (Nicholas) Blood glucose concentration above normal/too high; [1] (Nicholas) greater variation of concentration; [1]	[2]
	(iv) Any two from: Thirst; Lethargy; Urinating frequently; Glucose in urine; Other appropriate response (only once);	[2]
	(v) Any two from: Eye damage; Kidney failure; Heart disease/high blood pressure Stroke; Other appropriate response (only once);	[2]
	(c) Any three from: Diabetes increases with age; 16–34 number of cases the same; More male cases (in all other age groups); Beyond 65 – number of cases in both genders levels off/increases slower; Biggest difference in cases between 16–34 and 35–54;	[3]
		14
8	(a) Rory; Rory BMI = 31/32;	[1] [1] [2]
	(b) (i) $32700 \div 1090$; $= 705$ (J per day) = 30 days; $93 - 30 = 63$ days;	[1] [1] [1] [3]
	(ii) Balance energy use and energy intake/Reduce/control food intake; Continue exercising;	[1] [1] [2]
	(c) Any two from: Age; Gender; Pregnancy;	[2]
		9

		AVAILABLE MARKS
9	(a) A – Sensory (neurone); B – Muscle/effector;	[1] [1]
	(b) X↑;	[1]
	(c) Any two from: Short distance; Small number of neurones/some long neurones; Small number of synapses;	[2]
	(d) Any four from: Electrical impulse (arrives at synapse); (Neurotransmitter) chemical produced/released (by neurone); Diffusion (to chemical (/neurotransmitter)); Across gap/space/between neurones; High enough concentration of chemical; Causes/triggers impulse in next neurone ;	[4]
	(e) Slower/no impulses pass along neurone;	[1]
		10

10 Indicative content:

1. Phototropism;
2. Auxin;
3. (Auxin/hormone) produced (by cells) at tip of shoot/stem;
4. (Auxin/hormone) moves/diffuses down shoot/stem;
5. One-sided light causes uneven distribution/higher auxin/hormone concentration in shaded side;
6. (Auxin/hormone) causes (individual) cells to lengthen;
7. More cells lengthen in shaded side/shaded side grows faster than light side;
8. Shoot/stem **bends/grows** towards light;

Response	Marks
Candidates must use appropriate, specialist terms throughout using at least FIVE of the above points . They use good spelling, punctuation and grammar and the form and style are of a high standard .	[5]–[6]
Candidates use some appropriate, specialist terms throughout using THREE of the above points . They use satisfactory spelling, punctuation and grammar and the form and style are of a satisfactory standard.	[3]–[4]
Candidates make little use of specialist terms throughout using ONE of the above points . The spelling, punctuation and grammar, form and style are of a limited standard.	[1]–[2]
Response not worthy of credit.	[0]

[6] 6

			AVAILABLE MARKS
11	(a) Tube containing indicator (but no pond weed);	[1]	
	(b) Different mass/size/number of leaves;	[1]	
	(c) Any two from: Temperature; Concentration of indicator; Mass of plant (if not given in (b)); pH; Species of pondweed;	[2]	
	(d) Hydrogencarbonate (indicator) Accept: bicarbonate indicator	[1]	
	(e) Photosynthesis greater than : Respiration; Carbon dioxide low/decreases/used up;	[1] [1] [1] [3]	
	(f) (i) Red; (ii) Any two from: Light intensity; At which photosynthesis equals respiration; O ₂ production equals consumption/CO ₂ produced equals CO ₂ used;	[1] [2]	11

			AVAILABLE MARKS
12	(a) To produce amino acids/proteins; for growth;	[1] [1]	[2]
	(b) Active uptake/absorption/transport;	[1]	
	(c) (i) Any four from: Waterlogged soil; Little or no oxygen/anaerobic; Denitrifying bacteria active ; Change nitrates; Into nitrogen gas ;	[4]	
	(ii) Nitrogen compounds dissolve /soluble in water; Percolate/move through soil;	[2]	
	(d) Indicative content: 1. Total of nitrogen compounds produced equals the amount absorbed by plants; 2. Higher temperatures make bacteria more active; 3. Aerobic conditions/bacteria; 4. Saprophytic/decomposing bacteria/decomposition; 5. Produce ammonium compounds; 6. Nitrifying bacteria/nitrification; 7. (Ammonia compounds) → nitrates; 8. Nitrogen-fixing bacteria (in soil active/root nodules); 9. Producing nitrate/ammonium compounds from nitrogen (gas); 10. Reduced denitrification/ less nitrates → nitrogen gas;		
Response	Mark		
Candidates must use appropriate, specialist terms throughout to explain how nitrogen cycle bacteria maintain a constant amount of nitrogen compounds in the soil while the amount in the wheat increases using at least FIVE of the above points . They use good spelling, punctuation and grammar and the form and style are of a high standard .	[5]–[6]		
Candidates use some appropriate, specialist terms throughout to explain how nitrogen cycle bacteria maintain a constant amount of nitrogen compounds in the soil while the amount in the wheat increases using at least THREE of the above points . They use satisfactory spelling, punctuation and grammar and the form and style are of a satisfactory standard .	[3]–[4]		
Candidates make little use of specialist terms throughout to explain how nitrogen cycle bacteria maintain a constant amount of nitrogen compounds in the soil while the amount in the wheat increases using at least ONE of the above points . The spelling, punctuation and grammar, form and style are of a limited standard .	[1]–[2]		
Response not worthy of credit.	[0]
