## GCSE PHYSICS

Higher Tier

Paper 1H

### Specimen 2018

### Time allowed: 1 hour 45 minutes

### **Materials**

For this paper you must have:

- a ruler
- a calculator
- the Physics Equation Sheet (enclosed).

### Instructions

- Answer **all** questions in the spaces provided.
- Do all rough work in this book. Cross through any work you do not want to be marked.

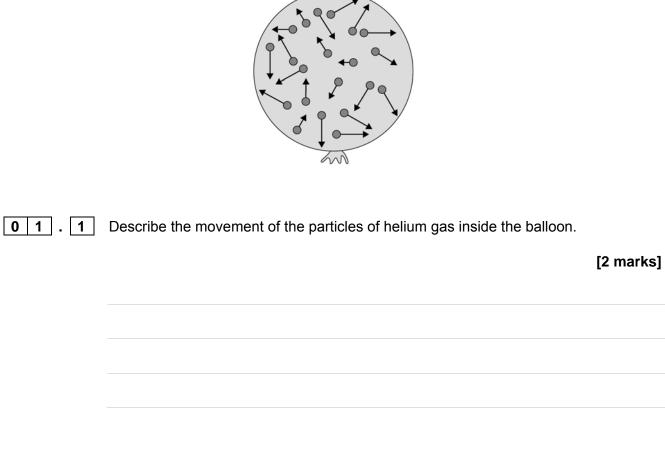

### Information

- There are 100 marks available on this paper.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.
- When answering questions 02, 12 and 13.4 you need to make sure that your answer:
  - is clear, logical, sensibly structured
  - fully meets the requirements of the question
  - shows that each separate point or step supports the overall answer.

### Advice

• In all calculations, show clearly how you work out your answer.

Please write clearly, in block ca	bitals.
Centre number	Candidate number
Surname	
Forename(s)	
Candidate signature	

01.2	What name is given to the total kinetic energy and potential energy of all the particles of helium gas in the balloon?	
	[1	mark]

Tick one box.

External energy	
Internal energy	
Movement energy	

Figure 1

Figure 1 shows a balloon filled with helium gas.

0 1

01.3	Write dov	vn the equation which li	nks density, mass and v	volume.	
					[1 mark]
0 1 . 4	The heliu	m in the balloon has a r	mass of 0.00254 kg.		
	The ballo	on has a volume of 0.0	141 m <sup>3</sup> .		
	Calculate	the density of helium. (	Choose the correct unit	from the box.	[3 marks]
		m <sup>3</sup> / kg	kg / m <sup>3</sup>	kg m <sup>3</sup>	

### There are no questions printed on this page

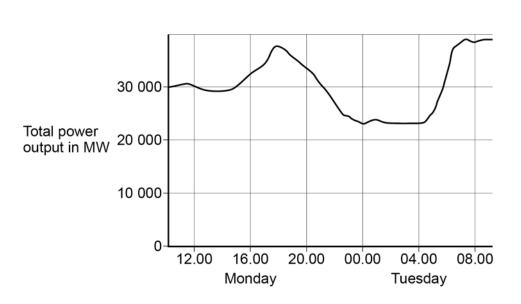

For example in the early 20th Century the plum pudding model of the atom was replaced by the nuclear model of the atom.

Explain what led to the plum pudding model of the atom being replaced by the nuclear model of the atom.

[6 marks]

The National Grid ensures that the supply of electricity always meets the demand of the consumers.

**Figure 2** shows how the output from fossil fuel power stations in the UK varied over a 24-hour period.

**0 3 . 1** Suggest one reason for the shape of the graph between 15.00 and 18.00 on Monday.

[1 mark]

0 3

Gas fired power stations reduce their output when demand for electricity is low.

Suggest one time on Figure 2 when the demand for electricity was low.

[1 mark]

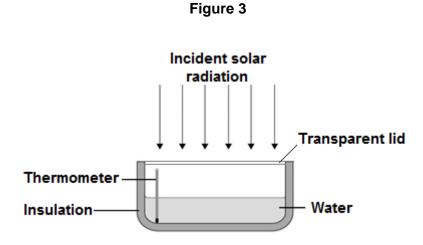

**0 3 . 3** The National Grid ensures that fossil fuel power stations in the UK only produce about 33% of the total electricity they could produce when operating at a maximum output.

Suggest <b>two</b> reasons why.	[2 marks]
1	
2	

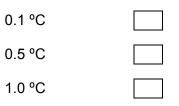

**0 4** A student investigated how much energy from the Sun was incident on the Earth's surface at her location.

She put an insulated pan of water in direct sunlight and measured the time it took for the temperature of the water to increase by 0.6 °C.

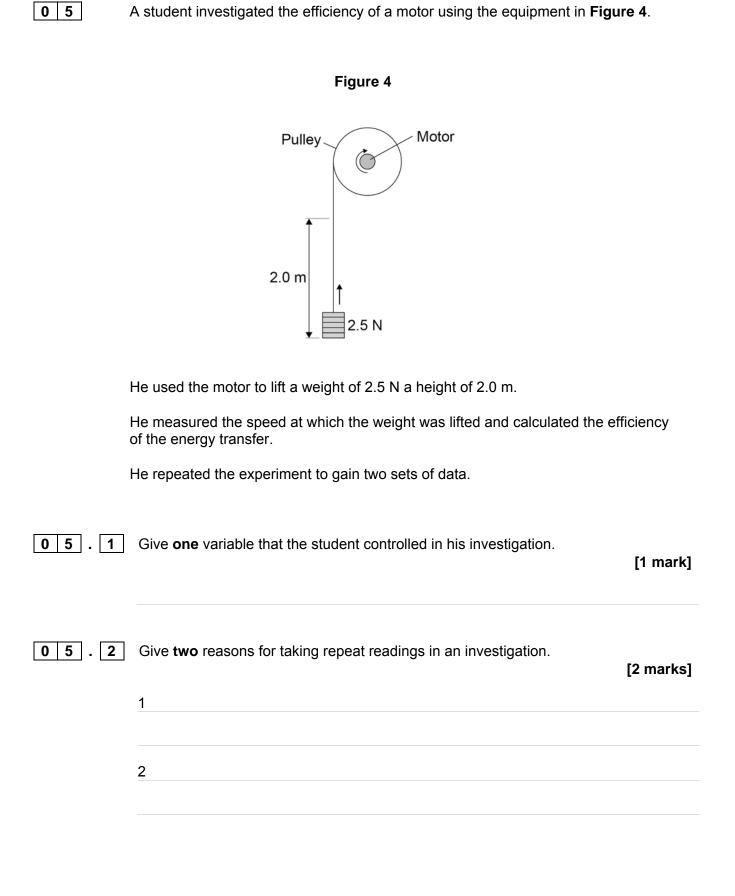

The apparatus she used is shown in Figure 3.

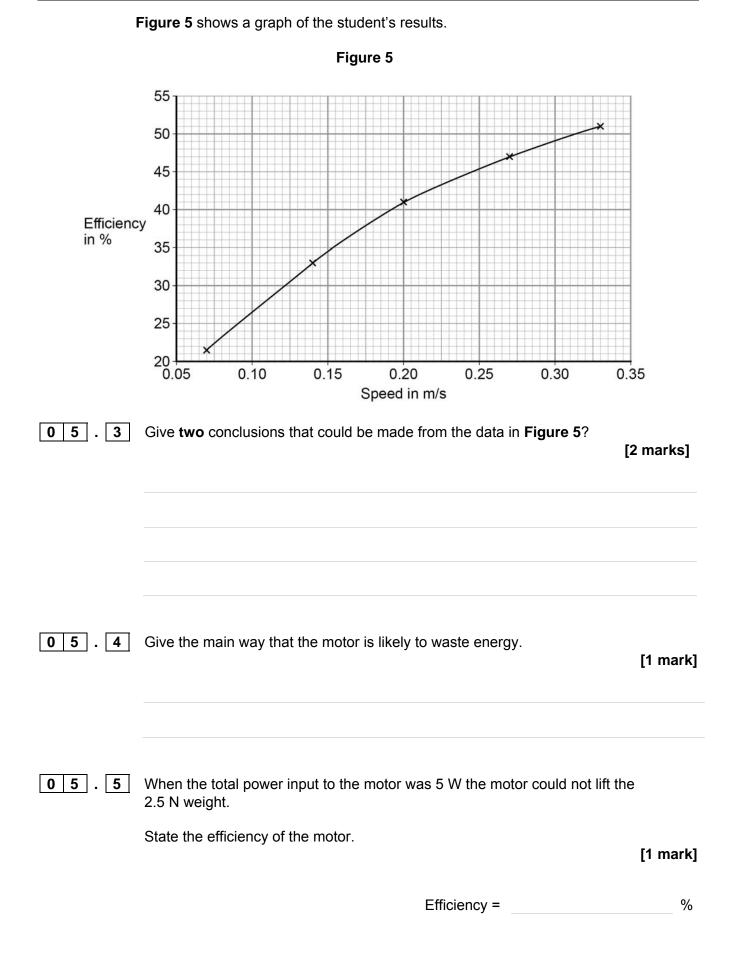

0 4 . 1 Choose the most appropriate resolution for the thermometer used by the student. [1 mark] Tick one box.

	The energy transferred to the water was 1050 J.	
	The time taken for the water temperature to increase by 0.6 °C was 5 minutes.	
	The specific heat capacity of water is 4200 J/kg °C.	
04.2	Write down the equation which links energy transferred, power and time.	[1 mark]
04.3	Calculate the mean power supplied by the Sun to the water in the pan.	2 marks]
	Average power =	W
0 4 . 4	Calculate the mass of water the student used in her investigation. Use the correct equation from the Physics Equation Sheet. [3	amarks]
	Mass =	kg
04.5	The student's results can only be used as an estimate of the mean power at I location.	her
	Give <b>one</b> reason why.	[1 mark]

Before it is switched on, the metal dome has no net charge.

After it is switched on, the metal dome becomes positively charged.

#### Figure 6

Image of a Van de Graaff generator not reproduced here due to third party copyright restrictions.

**0 6 . 1** Explain how an uncharged object may become positively charged.

[3 marks]

### **06. 2 Figure 7** shows a plan view of the positively charged metal dome of a Van de Graaff generator.

Draw the electric field pattern around the metal dome when it is isolated from its surroundings.

Use arrows to show the direction of the electric field.

[2 marks]

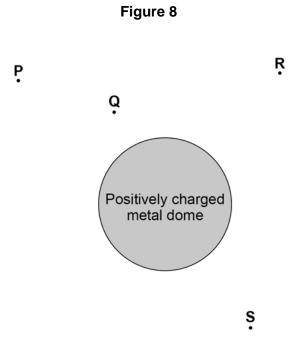

Figure 7

Positively charged metal dome

Question 6 continues on the next page

Look at Figure 8.

In which position would the object experience the greatest force?

Tick **one** box.

[1 mark]

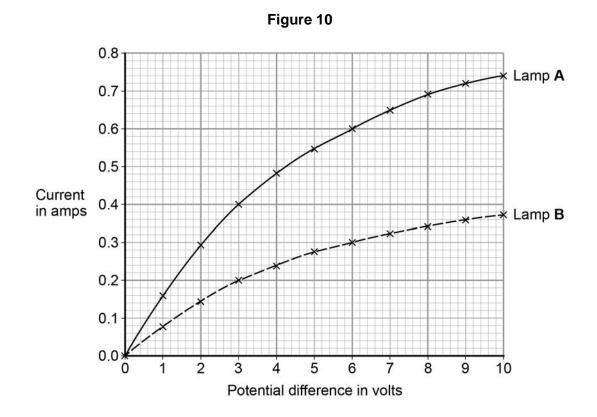

### Figure 9 12 V 45 Ω А R 60 Ω **0 7 . 1** The ammeter displays a reading of 0.10 A. Calculate the potential difference across the 45 $\Omega$ resistor. [2 marks] V Potential difference = 0 7 . 2 Calculate the resistance of the resistor labelled R. [3 marks] Ω Resistance = 0 7 . 3 State what happens to the total resistance of the circuit and the current through the circuit when switch **S** is closed. [2 marks]

A student set up the electrical circuit shown in Figure 9.

0 7

### **0** 8 A student investigated how current varies with potential difference for two different lamps.

Her results are shown in Figure 10.

**08. 1** Complete the circuit diagram for the circuit that the student could have used to obtain the results shown in **Figure 10**.

[3 marks]

08.2	Which lamp will be brighter at any potential difference?	
	Explain your answer.	
	Use Figure 10 to aid your explanation	[2 marks]
0 8 . 3	Lamp <b>B</b> has the higher resistance at any potential difference.	
	Explain how <b>Figure 10</b> shows this.	[2 marks]
08.4	Both lamps behave like ohmic conductors through a range of values of potential difference.	
	Use <b>Figure 10</b> to determine the range for these lamps.	
	Explain your answer.	[3 marks]

**0 9** A student models the random nature of radioactive decay using 100 dice.

He rolls the dice and removes any that land with the number 6 facing upwards.

He rolls the remaining dice again.

The student repeats this process a number of times.

Table 1 shows his results.

Roll number	Number of dice remaining		
0	100		
1	84		
2	70		
3	59		
4	46		
5	40		
6	32		
7	27		
8	23		

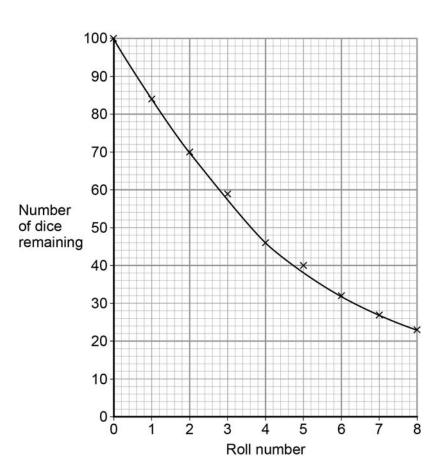

#### Table 1

**0 9 . 1** Give two reasons why this is a good model for the random nature of radioactive decay.

[2 marks]

1			
2			

The student's results are shown in Figure 11.

**0 9 . 2** Use **Figure 11** to determine the half-life for these dice using this model. Show on **Figure 11** how you work out your answer.

[2 marks]

Half-life = \_\_\_\_\_ rolls

Question 9 continues on the next page

A teacher uses a protactinium (Pa) generator to produce a sample of radioactive material that has a half-life of 70 seconds.

In the first stage in the protactinium generator, uranium (U) decays into thorium (Th) and alpha ( $\alpha$ ) radiation is emitted.

The decay can be represented by the equation shown in Figure 12.

Figure 12

$$^{238}_{92}U \longrightarrow \overset{234}{\square}Th + \alpha$$

**0 9 . 3** Determine the atomic number of thorium (Th) 234.

[1 mark]

Atomic number =

When protactinium decays, a new element is formed and radiation is emitted.

The decay can be represented by the equation shown in **Figure 13**.

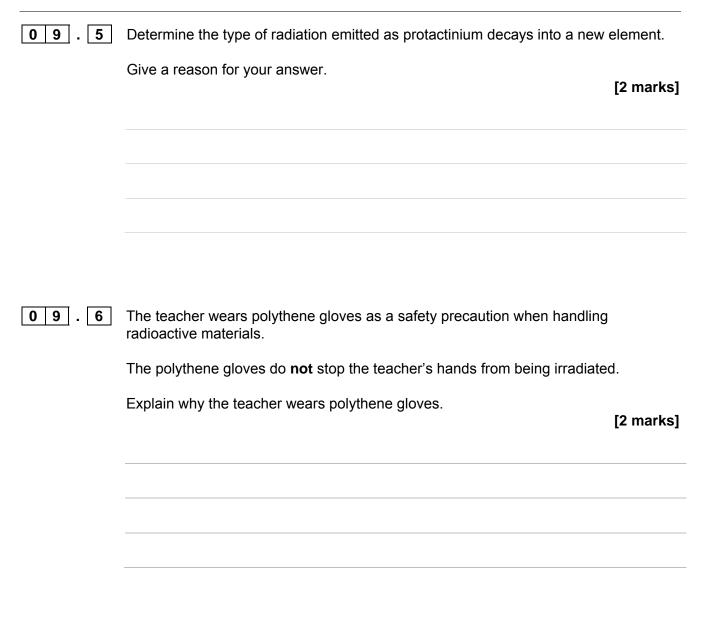

Figure 13

 $^{234}_{91}Pa \rightarrow ^{234}_{92}X$  + radiation

**0 9 . 4** When protactinium decays, a new element, **X**, is formed.

Use information from Figure 12 and Figure 13 to determine the name of element X. [1 mark]

Fission is the process by which energy is released in the nuclear reactor.

**1 0 . 1 Figure 14** shows the first part of the nuclear fission reaction.

Complete **Figure 14** to show how the fission process starts a chain reaction.

[3 marks]

### Figure 14

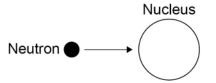

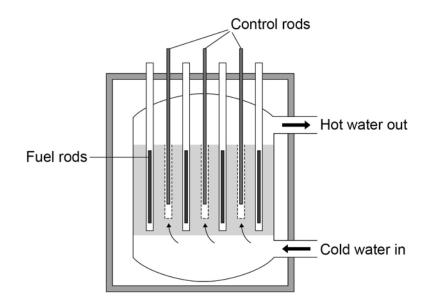

Figure 15 shows the inside of a nuclear reactor in a nuclear power station.

**1 0 . 2** In a nuclear reactor a chain reaction occurs, which causes neutrons to be released.

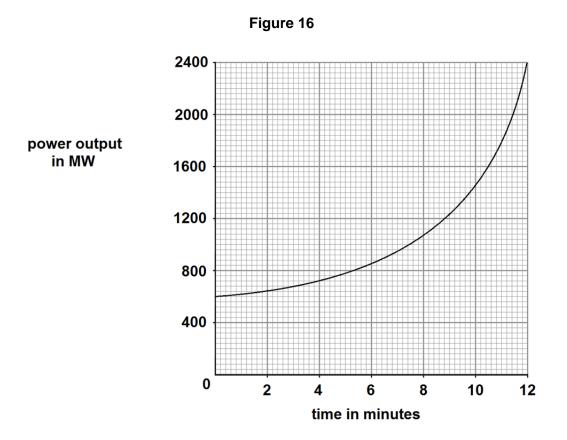

The control rods absorb neutrons.

The control rods can be moved up and down.

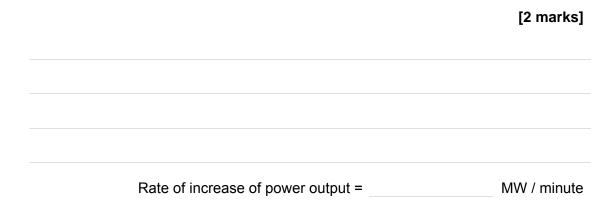

Explain how the energy released by the chain reaction is affected by moving the control rods.

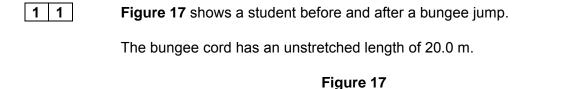

[2 marks]

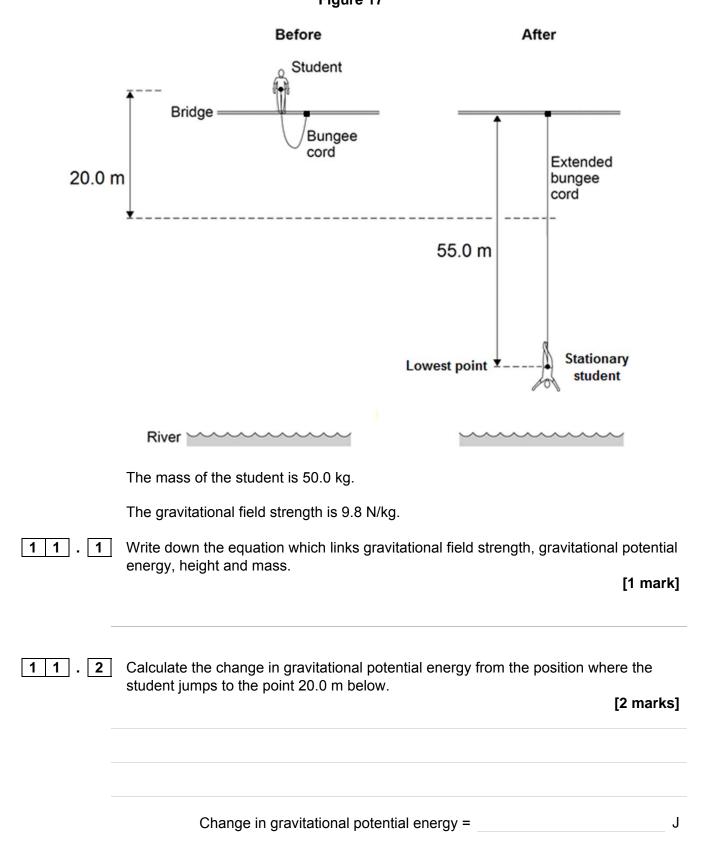

Figure 16 shows how the power output of the nuclear reactor would change if the control rods were removed.

**1 0 . 3** Calculate the rate of increase of power output at 10 minutes.

1 1 . 3	80% of this change in gravitational potential energy has been transferred to the student's kinetic energy store.
	How much has the student's kinetic energy store increased after falling 20.0 m?
	[1 mark]
	Kinetic energy gained =
11.4	Calculate the speed of the student after falling 20.0 m.
	Give your answer to two significant figures. [4 marks]
	Speed = m/s
1 1 . 5	At the lowest point in the jump, the energy stored by the stretched bungee cord is 24.5 kJ.
	The bungee cord behaves like a spring.
	Calculate the spring constant of the bungee cord.
	Use the correct equation from the Physics Equation Sheet. [3 marks]
	Spring constant = N / m

A student wants to calculate the density of the two objects shown in Figure 18.

#### Figure 18

Image of a metal cube not reproduced here due to third party copyright restrictions.

Image of a small statue not reproduced here due to third party copyright restrictions.

Metal cube

Small statue

Describe the methods that the student should use to calculate the densities of the two objects.

[6 marks]

#### An electrician is replacing an old electric shower with a new one. 1 3

The inside of the old shower is shown in Figure 19.

### Figure 19

Image of the inside of an electric shower not reproduced here due to third party copyright restrictions.

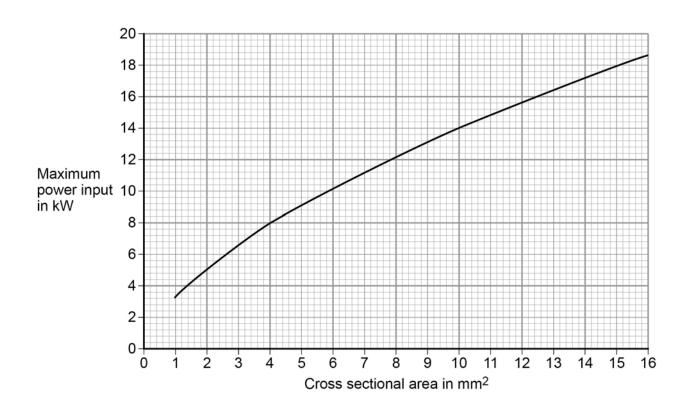

**1 3 . 1** If the electrician touches the live wire he will receive an electric shock.

Explain why.

[4 marks]

Different electrical wires need to have a cross-sectional area that is suitable for the power output.

**Figure 20** shows the recommended maximum power input to wires of different cross-sectional areas.

### **1 3 . 2** The new electric shower has a power input of 13.8 kW.

Determine the minimum **diameter** of wire that should be used for the new shower.

The diameter, d, can be calculated using the equation:

$$d = \sqrt{\frac{4A}{\pi}}$$

A is the cross-sectional area of the wire.

[2 marks]

mm

Minimum diameter =

### **1 3 . 3** The charge that flows through the new shower in 300 seconds is 18 000 C. The new electric shower has a power of 13.8 kW.

Calculate the resistance of the heating element in the new shower.

Write down any equations you use.

[5 marks]

Ω

Resistance =
