GCSE Physics 5PH2H/01

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.edexcel.com</a> or <a href="https://www.btec.co.uk">www.btec.co.uk</a> for our BTEC qualifications.

Alternatively, you can get in touch with us using the details on our contact us page at <a href="https://www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: www.edexcel.com/teachingservices.

You can also use our online Ask the Expert service at <a href="www.edexcel.com/ask">www.edexcel.com/ask</a>. You will need an Edexcel username and password to access this service.

## Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

Question	Answer	Acceptable answers	Mark
Number			
1(a)(i)	С		(1)

Question Number	Answer	Acceptable answers	Mark
1(a)(ii)	В		(1)

Question Number	Answer			Acceptable answers	Mark
1(b)	substitution 3.7 x 13 evaluation 48 (C)	(1)	(1)	48.1 Correct answer with no calculation scores 2 marks	(2)

Question Number	Answer	Acceptable answers	Mark
1(c)(i)	Correct responses can be seen in (i) or (ii)		(2)
	An explanation linking		
	• <u>electrons</u> (1)	["positive electrons/ protons moving", seen anywhere in part (i) or (ii) loses this mark]	
	and one of	ignore reference to charge before rubbing	
	<ul><li>removed by friction (1)</li><li>(transferred) to plastic (1)</li></ul>	transferred from cloth	

Question Number	Answer	Acceptable answers	Mark
1(c)(ii)	opposite to charge on plastic (1)	charge on cloth is positive	(2)
	equal to charge on the plastic	same size as charge on plastic	
	(1)	electrons transferred from the cloth equal to electrons lost by cloth	

Question Number	Answer	Acceptable answers	Mark
2(a)	Description including 3 of the following:		(3)
	(Gravitational) potential energy (transferred) to KE(1)	(G)PE (transferred) to KE Allow gravitational energy for GPE	
	<ul> <li>Idea of energy transfer to heat/sound whilst descending (1)</li> </ul>	Energy transferred to heat because of air resistance/ friction	
	<ul> <li>Chemical energy is transferred to heat energy in Andrew (1)</li> </ul>		
	<ul> <li>Idea of energy dissipated on stopping (1)</li> </ul>	The energy goes to heat as he stops. Energy is transferred to the surroundings	

Question Number	Answer	Acceptable answers	Mark
2(b)(i)	substitution (1) 67 × 31 evaluation (1)	2080, 2100	(2)
	2077 (kg m/s)	working backwards using 2000 (v=) 29.85, 30 (m=) 64.52, 65  67 X 31=2000 scores only one mark	

Question Number	Answer	Acceptable answers	Mark
2(b)(ii)	substitution (1) 2000 ÷ 2.3 evaluation (1)	answer to (b)(i)) ÷ 2.3	(2)
	870 (N)	900, 869.6, 869.5 903	

Question Number	Answer	Acceptable answers	Mark
2(b)(iii)	an explanation linking two of the following		(2)
	Force on Andrew is quite small (1)	force is reduced/ less /not as strong	
	Because impact time is long (1)	slows down/changes momentum gradually	
	The acceleration/deceleration is quite small (1)	acceleration = 1.35 'g' or 13.5 m/s <sup>2</sup>	
	Because impact distance is far (1)	slows down (rate of) change of momentum scores 2 marks	

Total question 2 = 8 marks

Question Number	Answer	Acceptable answers	Mark
3(a)	D		(1)

Question	Answer	Acceptable answers	Mark
Number			
3(b)(i)	12 (m/s) (1)	Range from 11(m/s) to 14 (m/s)	(1)

Question Number	Answer		Acceptable answers	Mark
3(b)(ii)	Substitution (1) 20-0 5 evaluation 4 (m/s²)	(1)	20 5 Full marks for correct answer with no working Allow answers between 3.6 and 4.7 for 2 marks to reflect readings taken from the graph	(2)

Question Number	Answer	Acceptable answers	Mark
3b(iii)	<ul> <li>velocity/ speed (measured in) m/s (1)</li> </ul>	velocity/ speed (measured in) ms <sup>-1</sup>	(2)
	• <u>divided</u> by time in s (1)	acceleration is rate of change of velocity  m/s/s m per s per s  [accept per for divide]	
		do not accept m/s times time	

Question Number	Answer	Acceptable answers	Mark
3b(iv)	at constant vel  distance = 60 (m) (1)		(3)
	slowing down		
	• distance = $\frac{1}{2} \times 2 \times 20$ (1)		
	• = 20 (m) (1)	correct answer scores 2 marks	

Total for question 3=10 marks

Question	Answer	Acceptable answers	Mark
Number			
4(a)	Α		(1)

Question	Answer	Acceptable answers	Mark
Number			
4(b)	axes labelled correctly With label or unit (1)	activity / Bq / count rate ignore radioactivity time/ seconds/ any time unit	(3)
	correct shaped smooth curve (1)		
	line does not reach zero activity (1)		

Question Number	Answer	Acceptable answers	Mark
4(c)(i)	Idea of 2 half-lives (1) 11 $400 = 2 \times 5700$ Idea of halving activity twice (1) $0.55 \times 2 \times 2$	11 400 / 5700 = 2	(3)
	Calculation (1) 2.2 (Bq)	2.2 (Bq) for three marks	

Question Number	Answer	Acceptable answers	Mark
4(c)(ii)	Explanation linking two of:  • Background radiation affects the measurement (1)	accept interfering / including	(2) t
	<ul> <li>Needs to be subtracted from readings (1)</li> <li>Background radiation is variable (1)</li> <li>Background radiation needs to be averaged (1)</li> </ul>	varies with place/time/random nature repeating test improves reliability	

Question Number	Answer	Acceptable answers	Mark
4(c) (iii)	One relevant idea: (New method) more accurate (1)  Hard to measure a small activity (1)  Background radiation affects readings (1)  Need to find difference of two small quantities (1)  Can test smaller samples (1)	ignore better method/results / more reliable  difficult to distinguish between the reading and background	(1) grad

Total for question 4=10 marks

Question	Answer	Acceptable answers	Mark
Number			
5(a)(i)	11x 0.4 (substitution) (1) 4.4 (V) (1)	Full marks for correct answer with no calculation	(2)

Question	Answer	Acceptable answers	Mark
Number			
5(a)(ii)	0.6 - 0.4 (A)	0.2 or 1/5 (A)	(1)
	(1)		

Question Number	Answer	Acceptable answers	Mark
5(a)(iii)	В		(1)

Question	Answer	Acceptable answers	Mark
Number		·	
5(b)	An explanation linking:		(2)
	electrons		
	(1)		
		colliding with other electrons	
	{colliding with / bumping into}	3	
	ions in the lattice /atoms in the		
	metal (1)	If no other marks scored, allow	
		for 1 mark for "electrical energy	
		{transferred/changed} into	
		thermal/heat energy"	
		do not allow energy being	
		created or produced	

Questio			Mark
QWC	*5(c)	A explanation including some of the following points	
		Light dependent resistors (LDR)	
		<ul> <li>Resistance changes with light intensity</li> <li>Bright light, low resistance</li> <li>No light (dark), high resistance</li> <li>Low resistance gives high current.(RA)</li> </ul>	
		<ul> <li>Thermistor</li> <li>Resistance changes with temperature</li> <li>Negative temperature coefficient</li> <li>High temperature, low resistance</li> <li>Low temperature, high resistance</li> <li>Low resistance gives high current (RA)</li> </ul>	
			(6)
Level	0	No rewardable content	
1	1 - 2	<ul> <li>a limited explanation linking light affecting LDR AND heat affecting thermistor         OR a correct relationship for one device,         e.g. thermistors change resistance when the temperature changes and LDRs change resistance when it gets dark OR the {resistance decreases/ current increases} of a LDR when the light gets brighter</li> <li>the answer communicates ideas using simple language and uses limited scientific terminology</li> </ul>	
2	3 - 4	<ul> <li>spelling, punctuation and grammar are used with limited accuracy</li> <li>a simple explanation correctly linking the temperature and light with resistance or current for both devices         OR a correct relationship for one device with a link to the way this affects the current and resistance.         e.g. the resistance of a LDR increases when the light gets dimmer and when the temperature lowers the resistance of a thermistor increases OR the resistance of a LDR decreases when the light gets brighter and this increases the current</li> <li>the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately</li> </ul>	
3	5 - 6	9	

Question Number	Answer	Acceptable answers	Mark	
6(a)(i)	Any <b>two</b> of:	Reverse arguments	(2)	
	Gamma is a wave (1) Alpha is a helium nucleus (1)	em radiation		
		Gamma has no charge		
	Alpha has a mass (1)	Gamma has no mass		
	Gamma penetrates further/	examples of penetrating power		
	highly (1)			
	Gamma weakly ionising (1) Gamma travels faster (1)	alpha highly ionising		
		ignore vague comments eg stronger Ignore uses and dangers		

Question	Answer	Acceptable answers	Mark
Number			
6(b)(i)	D		(1)

Question	Answer	Acceptable answers	Mark
Number			
6(b)(ii)	В		(1)

Question	Answer	Acceptable answers	Mark
Number			
6(c)	An explanation linking:		(2)
	electron(s) (1)	do not allow positive electron	
	is/are lost/gained (1)	knocked off / removed/ released	

Question		Indicative Content		
Radiation from the front of the lens Alpha particles absorbed by glass Beta particles do not penetrate glass Gamma rays pass through glass Background radiation varies There is a large difference in size between f Radiation detected is gamma rays only  Radiation from side of the lens Alpha particles cannot penetrate aluminium Beta particles are absorbed by aluminium Gamma rays pass through aluminium There is a small/no difference in size betwee counts Perhaps a few gamma rays absorbed by alu Background radiation varies Likely to contain gamma rays only May be different from front count due to rar emissions  Radiation from the back of the lens Alpha particles absorbed by coating and/or Beta particles are emitted the from rear sur Gamma rays emitted from radioactive glass There is a large difference in size between f Background radiation varies Radiation is both beta particles and gamma		Alpha particles absorbed by glass Beta particles do not penetrate glass Gamma rays pass through glass Background radiation varies There is a large difference in size between front and back counts Radiation detected is gamma rays only  Radiation from side of the lens Alpha particles cannot penetrate aluminium Beta particles are absorbed by aluminium Gamma rays pass through aluminium There is a small/no difference in size between front and side counts Perhaps a few gamma rays absorbed by aluminium Background radiation varies Likely to contain gamma rays only May be different from front count due to random nature of emissions  Radiation from the back of the lens Alpha particles absorbed by coating and/or glass Beta particles are emitted the from rear surface Gamma rays emitted from radioactive glass There is a large difference in size between front and back counts	(6)	
Level	0	No rewardable content	!4!4	
1	1 - 2	<ul> <li>a limited explanation mentioning two unrelated points, but without linking them properly, e.g. beta particles are stopped by thick aluminium, there is most radiation behind the lens</li> <li>the answer communicates ideas using simple language and uses limited scientific terminology</li> <li>spelling, punctuation and grammar are used with limited accuracy</li> </ul>		
2	3 - 4	<ul> <li>a simple explanation mentioning some points with an appropriate linkage to one of the readings e.g. no beta particles escape forwards because the glass absorbs them OR only gamma rays escape to the side because the aluminium stops alpha and beta particles</li> <li>the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately</li> <li>spelling, punctuation and grammar are used with some accuracy</li> </ul>		

3	5 - 6	<ul> <li>a detailed explanation mentioning some of the points with appropriate linkage to a comparison of at least two of the readings e.g. no beta particles escape forwards because the glass absorbs them, but beta particles can escape backwards so that count is higher OR only gamma rays can get through the glass and the thick aluminium, so the front and side counts are about the same</li> <li>the answer communicates ideas clearly and coherently uses a range of scientific terminology accurately</li> </ul>
		<ul> <li>spelling, punctuation and grammar are used with few errors</li> </ul>

Total for question 6 = 12 marks
