UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the June 2004 question papers

0	654 CO-ORDINATED SCIENCES
0654/01	Paper 1 (Multiple Choice), maximum mark 40
0654/02	Paper 2 (Core), maximum mark 100
0654/03	Paper 3 (Extended Paper), maximum mark 100
0654/05	Paper 5 (Practical), maximum mark 45
0654/06	Paper 6 (Alternative to Practical), maximum mark 60

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

Grade thresholds taken for Syllabus 0654 (Co-ordinated Sciences) in the June 2004 examination.

	maximum				
	mark available	AA	CC	EE	FF
Component 1	40	34	26	19	16
Component 2	100	1	41	24	18
Component 3	100	66	42	24	18
Component 5	45	32	22	14	10
Component 6	60	48	39	25	17

The threshold (minimum mark) for B is set halfway between those for Grades A and C. The threshold (minimum mark) for D is set halfway between those for Grades C and E. The threshold (minimum mark) for G is set as many marks below the F threshold as the E threshold is above it.

Grade A* does not exist at the level of an individual component.

	CO-ORDINATED SCIENCES – JUNE 2003	0654	2

10 (a)(i)	flask becomes warm / temperature of mixture increases;	[1]
(ii)	magnesium + sulphuric acid magnesium sulphate + hydrogen;	[1]
(iii)	ignite gas; pops;	[2]
(b)(i)	8 minutes;	[1]
(ii)	everywhere above the existing line after start; levels off earlier and at the same final volume;	[2]
(iii)	reaction rate greater; graph steeper because more gas produced per minute; powder has greater surface area; same final volume because amounts of reactants same;	[3] max Total [10]
11 (a)	one mark per correct label ; ; ;	[3]
(b)	oxygen ;	[1]
(c)(i)	(unidirectional) light ;	[1]
(ii)	obtain more light ; for photosynthesis ;	[2] Total [7]

Total for Paper = [100]

INTERNATIONAL GCSE

MARKING SCHEME

MAXIMUM MARK: 100

SYLLABUS/COMPONENT: 0654/03

CO-ORDINATED SCIENCES (DOUBLE AWARD)
Paper 3 (Extended)

Page 1	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

1(a) **P** key made up of pairs of statements; **C** each pair of characters genuinely contrasting and usable; A all animals key out correctly; **F** (no more than) four pairs of characters used; (b) hair / fur ; (c)(i) no teeth; lay eggs; not 'only lay a single egg' 2 (ii) internal fertilisation / fertilisation in oviduct; 2 feed young on milk / have mammary glands; Total [9]

Acceptable pairs for C:

has tail / has no tail
has long tail / has (very) short tail
stands on 4 legs / stands on two legs
spots / no spots
spikes / no spikes
only end of tail furry / fur all along tail
blunt snout / long pointed snout
whiskers / no whiskers

Not acceptable:

large eyes / small eyes long legs / short legs big ears / small ears

Page 2	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

2(a) wave;

use;

	viewing body organs medical
gamma rays	imaging / tracing
	checking structures – e.g. bridges
	treating cancer
	sterilising food
	viewing bones / body organs /
X rays	medical imaging / CT scanning
	security checks (at airports)
	fluorescent lights
ultraviolet	sterilising things
	cooking security sensors
infrared	carrying signals (in optical fibres)
	remote controls (e.g. television)
	night-viewing scopes
	cooking mobile phones
microwaves	transferring information (as radio
	waves)
	satellite communication

(b) travel at same speed / transverse waves/ can travel through vacuum;

.

2

(c) ref to static electricity;

screen acquires negative charge / electrons have negative charge ;

dust particles have, opposite / positive, charge /attraction between positive

and negative charges;

max 1 if reference to magnetic field

2 max

d(i) red, green and blue;; 1 mark for two correct, 2 marks for all correct

2

(ii) (all) other colours can be made from these; ignore refs to white, or to e.g.s of pigment mixing

Total [8]

Page 3	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

3(a)	`low density / light(weight);	
	keep mass of aircraft down / increase fuel efficiency;	2
(b)(i)	$MgC\mathit{l}_2$;	
	reference to charge balance ;	2
(ii)	(liquid) so it can conduct / transfer charge / allow current to	
	flow;	
	ions in solid cannot move ;	
	ions free to move when molten;	
	if described in terms of electrons flowing, only first point	
	available	
	or	
	if it were in solution ;	
	hydrogen would form instead of magnesium;	2 max
(iii)	ions move to, cathode / negative electrode / steel electrode ;	
	gain electrons (from cathode);	
	gain two electrons each ;	2 max
(iv)	<u>chlorine</u> is produced and is toxic ;	
	not just 'dangerous' 'dangerous to health' is OK	1
(c)	the greater the difference in reactivity, the higher the voltage;	
	explanation of how results show that X is less reactive than	
	iron ;	2
		Total [11]

Page 4	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

4(a)(i)	1 as temperature increases, movement / kinetic energy, of	
	molecules increases;	
	2 more collisions;	
	3 more energetic collisions;	
	4 between, enzyme and substrate / lactase and lactose;	3 max
(ii)	(high temperatures) destroy (shape of) / denature, enzyme ;	
	progressively / more enzymes destroyed the higher the	
	temperature ;	
	all enzyme destroyed by ~95 $^{\circ}$ C ;	2 max
(b)	curve the same shape as the first one ;	
	lower optimum temperature (between 30 and 40 °C);	2
(c)(i)	<u>catalysts</u> ;	
	not used up in the reaction ;	2
(ii)	the milk product does not contain lactase / no need to remove	
()	lactase ;	1
(d)	small intestine / ileum ;	
()	through villi ;	
	by diffusion / active transport ;	2 max
	.,	Total [12]

Page 5	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

5(a) wavelength = velocity ÷ frequency; ignore triangles 1500 ÷ 50 000 ; 0.03 m / 3 cm; unit essential 3 (b) distance travelled is 2400 (m); time = distance ÷ speed; 1.6 s; unit essential doubling may occur at any stage of the calculation maximum 2 marks if no doubling - answer then 0.8 s 3 (c) ultrasound is not ionising / X rays are ionising; less possibility of harm / X rays can harm, mother / baby, cells; 2 (d) 20 000 / 23 000, Hz; unit essential Total [9]

Page 6	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

6(a)(i) animal waste / pesticides / fertilisers/ nitrates, from farmland; chemicals / waste / reasonable named substance from industry;

2

- (ii) 1 microorganisms / pathogens / bacteria / microbes / viruses, may be present ;
 - 2 dissolved substances may be present;
 - 3 which pass through filter / only solids stopped by filter;
 - 4 may make you ill / may be toxic;

3 max

(iii) chlorination / ozone;

1

(b)(i) removes dissolved calcium / calcium carbonate, is not soluble / precipitates ;

- (ii) 1 formula mass of calcium carbonate is $40 + 12 + (16 \times 3) = 100$;
 - 2 number of moles of calcium carbonate = $0.25 \div 100 = 0.0025$;
 - 3 this is the number of moles of hydrogencarbonate in $0.5 \, dm^3$;
 - 4 so concentration = $0.0025 \div 0.5 = 0.005 \text{ mol dm}^{-3}$;

if a different approach taken, look for equivalents to points 2 and 3

3 max

Total [10]

Page 7	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

 $A_1 \ and \ A_2 \ \ are both \ 2.0 \ A$; 7(a)(i) A_5 is 0.5 A; unit essential - maximum 1 mark if no units 2 (ii) 2; 1 (b) both 6V; unit essential, but do not penalise again if have already done so in (a)(i) 1 (c) water conducts electricity; danger of, electrocution / electric shock / short circuit; 2 Total [6]

Page 8	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

8(a)(i)	1 to make it a fair test;	
	2 to control a variable ;	
	3 leaves near end of branch different age from those near the	
	trunk ;	
	4 leaves near trunk more shaded / leaves at end get more	
	sunlight ;	2 max
(ii)	support	
(")	mean length is longer on the shady side / vice versa <i>or</i>	
	longest leaf is longer on the shady side;	
	longest lear is longer on the shady side ,	
	not support	
	shortest leaf is shorter on the shady side / vice versa;	2
(iii)	all the leaves have the same genes;	1
(b)(i)	random / unpredictable ;	
	change in, DNA / gene / chromosome ;	2
(ii)	cell division / mitosis ;	
. ,	during growth ;	
	chromosomes / genes / DNA/ mutation, passed from one cell	
	to its offspring ;	
	new cells formed are identical with parent cell;	2 max
(iii)	1 lack of chlorophyll / green leaves contain chlorophyll ; allow	
	chloroplasts	
	2 which absorbs (sun) light;	
	3 correct and relevant reference to photosynthesis;	
	4 link made between, carbohydrates / food / equivalent, and	_
	growth ;	3 max
		Total [12]

Page 9	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

9(a)(i)contains hydrogen and carbon only; 1 (ii) C₈H₁₈; (iii) 1 alkanes; (b) 1 molecules in diesel are larger than those in gasoline; 2 stronger intermolecular forces in diesel; 3 therefore more energy needed to separate molecules (hence high boiling point); 4 therefore more energy needed to drag molecules past each other (hence high viscosity); 2 max (c)(i) molecules contain a double (carbon-carbon) bond; 1 (ii) mix with, bromine / potassium permanganate; mixture turns colourless; 2 (iii) far greater demand as reactant / can be used to make other useful substances; e.g. ethanol / polythene; not just 'polymers' or 'plastics' 2 max (d) 1 heat / high pressure; 2 catalyst (phosphoric acid on silica); 3 mixture of ethene and steam (allow water if heat specified); $4 C_2H_4 + H_2O \longrightarrow C_2H_6O$; 3 max **Total** [13]

Page 10	Mark Scheme	Syllabus	Paper
	CO-ORDINATED SCIENCES – JUNE 2004	0654	3

10(a) silver; lowest voltage required; allow 'least resistance' if supported by calculation 2 (ii) resistance = voltage ÷ current ; $1.4 \div 0.8 = 1.75 \Omega$; unit essential 2 (c)(i) steel; 1 (ii) power = voltage x current; $24 \times 0.8 = 19.2 \text{ W}$; unit essential allow ecf if gave silver in (i) - answer is then 1.12 W 2 (d) 1 aluminium is, light / less dense; 2 aluminium, has low resistance / is good conductor; 3 but aluminium is weak; 4 steel is strong; 5 but steel has high resistance; 6 but steel is too, heavy / dense; 7 both aluminium and steel are cheap / copper is expensive; 3 max points 3, 5 and 6 must be written in such a way as to imply that these are disadvantages - i.e. reasons why this metal is not used alone **Total** [10]

Questi	on 6	
(a)(i)	Use a pipette/dropper/burette	[1]
(ii)	103 (no tolerance) (1) 147 (ecf) (1)	[2]
(b)	28mm, 14mm (+/- 1 mm)	[2]
(c)(i)	correct axes labelled and scale correctly shown (1) all points from Fig.6.3 plotted correctly (1) straight line drawn extended to cut horizontal axis (1)	[3]
(ii)	From candidates' own graph (approx 147 cm³)	[1]
(iii)	it will sink OWTTE	[1]
(d)	Yes/ comparison of (a) and (c)(ii) shows that mass in cup is numerically similar to (or greater than) its volume OR No/ cup sank before its mass (g) exceeded the volume (cm³) (depends on candidate's graph)	
	(mark for explanation) Total 11 i	[1]
	Total III	iiiai N5
