	CENTRE NUMBER	CANDIDATE NUMBER	
* 3 4	CO-ORDINATE	D SCIENCES	0654/05
1 2 9	Paper 5 Practic	cal Test	May/June 2009 2 hours
1 9	Candidates ans	wer on the Question Paper.	
6 7 2	Additional Mater	rials: As listed in Instructions to Supervisors	
*	READ THESE I	NSTRUCTIONS FIRST	

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Chemistry practical notes for this paper are printed on page 12.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

1 Hydrogen peroxide is produced in living cells during chemical reactions. It is poisonous if it is not removed quickly. The enzyme catalase is also found in living cells. It speeds up the breakdown of hydrogen peroxide to produce oxygen gas.

The experiment is to compare the activity of catalase in different tissues. You will use tissue **A**, which is potato, and tissue **B**. When the tissue is added to hydrogen peroxide solution, the oxygen given out is trapped in a foam as shown in Fig. 1.1. The height of foam, **h**, shows the activity of the catalase.

Take care when using hydrogen peroxide. If it gets onto your skin or in your eyes wash it off immediately with cold water.

(a)

- Measure 10 cm<sup>3</sup> hydrogen peroxide into a large test-tube.
- Add 2 drops of detergent.
- Prepare 2 cubes of sample **A** of side 1 cm length. Cut each cube in half so that you have four equal pieces.
- Add the pieces to the test-tube and immediately start the timer.
- Measure the height, **h**, of the foam every minute for 5 minutes.
- Enter your readings in Fig. 1.2.

Repeat the complete procedure with tissue B.

time/mins	height of foam <b>h</b> /mm		
ume/mins	tissue <b>A</b>	tissue <b>B</b>

For

Examiner's Use

The same experiment was carried out earlier with a sample of an animal's liver, tissue **C**. These results are plotted on Fig. 1.3.

**2** You are going to find the internal diameter, **d**, of the large test-tube provided.

(a)

- Fill the measuring cylinder with water to the 100 cm<sup>3</sup> mark.
- Clamp the test-tube vertically.
- Add water from the measuring cylinder until the test-tube is about one-fifth full.
- Measure to the nearest millimetre the height, **h**, of the water level above the base of the test-tube. Record it in Fig. 2.1.
- Record the reading, **V**, of the water left in the measuring cylinder.

<b>h</b> /mm	V/cm <sup>3</sup>	$(100 - \mathbf{V})/\mathrm{cm}^3$

#### Fig. 2.1

[3]

For Examiner's Use

- (b) (i) Add another portion (about 10 cm<sup>3</sup>) of water from the measuring cylinder to the test-tube. Measure and record the new height, h, and the reading, V, of the water left in the measuring cylinder.
  - (ii) Repeat (i) to obtain three further sets of readings of **h** and **V**. For the last reading the test-tube should be about three quarters full.

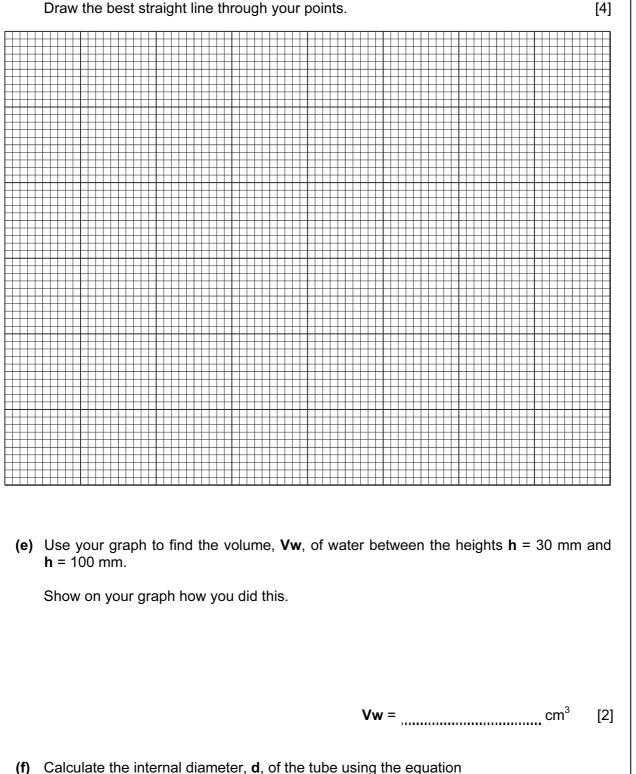

Record your readings in Fig. 2.1.

(c) Complete Fig. 2.1 by calculating the values of (100 - V)

### CHEMISTRY PRACTICAL NOTES

### Test for anions

anion	test	test result
carbonate (CO <sub>3</sub> <sup>2-</sup> )	add dilute acid	effervescence, carbon dioxide produced
chloride (C <i>l</i> ·) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
nitrate (NO <sub>3</sub> <sup>-</sup> ) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulfate (SO <sub>4</sub> <sup>2-</sup> ) [in solution]	acidify then add aqueous barium chloride <i>or</i> aqueous barium nitrate	white ppt.

### Test for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
ammonium ( $NH_4^+$ )	ammonia produced on warming	-
copper(II) (Cu <sup>2+</sup> )	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe <sup>2+</sup> )	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe <sup>3+</sup> )	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
zinc (Zn <sup>2+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess giving a colourless solution

#### Test for gases

gas	test and test results
ammonia (NH <sub>3</sub> )	turns damp red litmus paper blue
carbon dioxide (CO <sub>2</sub> )	turns limewater milky
chlorine (Cl <sub>2</sub> )	bleaches damp litmus paper
hydrogen (H <sub>2</sub> )	"pops" with a lighted splint
oxygen (O <sub>2</sub> )	relights a glowing splint
