1.11.	

Answer ALL the questions. Write your answers in the spaces provided.

1. (a) Substances move into and out of cells by different methods.

Three methods, A, B and C, are described below.

- A movement of substances against a concentration gradient
- **B** movement of water from a dilute solution to a more concentrated solution through a partially permeable membrane
- C movement of substances down a concentration gradient

Complete the table by putting the correct letter for each method.

Method	Letter of description
diffusion	
osmosis	
active transport	

(3)

- (b) Complete the sentences below by writing a correct word or phrase in the blank spaces.
 - (i) An example of diffusion in the lung of a mammal involves a substance called oxygen, which moves from the to the

(2)

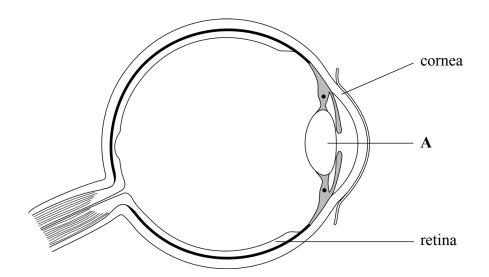

(ii) An example of osmosis in the kidney of a mammal involves a substance called, which moves from the nephron to the

	m a seashore seaweed → periwinkle → oystercatcher (a molluse) (a bird)	
		
r ro	m the edge of a field blackberry → bank vole → tawny owl	
	(a fruit) (a mammal) (a bird)	
(a)	(i) Name one primary consumer in these food chains.	
	(1)	
	(ii) What is the original energy source for these food chains?	
	(1)	
(b)	The following food chains come from a woodland environment.	
	leaf litter \rightarrow earthworm \rightarrow blackbird \rightarrow sparrow hawk	
	dead mouse \rightarrow blowfly larvae \rightarrow common frog \rightarrow grass snake	
	Other than the names of the organisms, give two ways in which these food chains differ from the examples in part (a).	
	1	
	2	
	(2)	
(c)	Name two groups of organisms that can act as decomposers in food chains.	
	1	
	2	
	(2)	

3. The diagram shows a section of the human eye.

(a) Name the part labelled A.

(1)

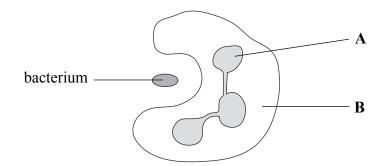

(b) Some people have a rare genetic condition that makes the cornea become cloudy. As a result they find it difficult to see clearly and may become blind.

(i) Suggest why a cloudy cornea makes it difficult for a person to see clearly.

(2)

					Leav blan	
(ii)	The condition for cloudy coallele, n , results in a clear of		by a domina	nt allele N . The re	cessive	
	A couple plan to have child the mother is homozygous		is heterozyg	ous for cloudy cor	nea and

13. (a) The diagram shows a section through the left side of the heart as seen from the front. The black arrows indicate the direction of blood flow.

atrioventricular (bicuspid) valves

(i) On the diagram, use an arrow and the letter A to show the left atrium.
(1)
(ii) Give two features of the diagram which show that the ventricle is contracting.
1
2
(2)
(iii) Name the vessel through which blood enters the left side of the heart.
(1)

Leave
blank

(b)	When a part of the heart contracts, the blood pressure in that part increases.
	When the part relaxes, the blood pressure in that part decreases.

The table shows the changes in blood pressure in the left atrium, the left ventricle and the aorta at different times during a sequence of contraction and relaxation of the heart.

Time in s		Blood pressure in kP	a
Time in s	Left atrium	Left ventricle	Aorta
0.0	0.5	0.4	10.6
0.1	1.2	0.7	10.6
0.2	0.3	6.7	10.6
0.3	0.4	17.3	16.0
0.4	0.8	8.0	12.0

	(1)
een which times are the atrioventricular valves closed?	
	(1)
ich time does blood start flowing into the aorta? Explain your	answer.
