Plan to dilute Coastal Law

Citizens' group fear changes will destroy ecologically sensitive zone.

Shailesh Gaikwad, Mumbai, November 22,

Will the city see a spurt in construction in areas like Colaba and Cuffe Parade, and high-rises on saltpan land? Probably yes, if the proposed plan of the Centre to dilute the Costal Regulation Zone Act (CRZ) becomes reality.

In its current form, the 1991 law restricts construction in ecologically sensitive costal areas.

The Centre is planning to dilute the restrictions and delegate the authority to allow construction in coastal areas, baring the most sensitive part of the zone, to State government, a move that has left environment activists aghast.

Citizen groups and environmentalists fear the proposed changes will throw open the coastal area to greedy builders and haphazard development.

"It is shocking and scandalous. Instead of strengthening it, the, Centre is diluting the law" said Debi Goenka of the Bombay Environment Action Group.

The 500-metre wide ecologically sensitive belt housing mangroves and other marine life between the sea and land is known as the Costal Regulation Zone. It acts as an important buffer between land and sea.

A diluted law would change the face of the city coast as the new provisions will most likely make way for vertical development in areas like Cuffe Parade, Colaba, Bandra and even saltpan land.

"They are, in fact, planning to scrap the Coastal Regulation Zone line and set up a vulnerability line."

Questions:

- (1) What is the hidden motive of the Government in diluting Coastal Regulation Zone Act (CRZ) ?
- (2) Which part of the coast fall under the category of CRZ? How is it beneficiary to environment?
- (3) If CRZ Act is diluted, what will be its impact on Mumbai?

 - Answer following questions related to the Case Study provided to you:—
 Case Study:

We need to get plastic out of our system

The Major devil polluting the environment is non-degradable plastic, which when dumped in drains chokes the path for gaseous exchange and does not let water seep in, thus lowering the underground water level.

When burnt, plastic produces thick, black, toxic smoke, thus polluting the air.

Therefore, the only way to save our environment is to minimize the use of plastic, which is not too tedious.

A bit of public awareness, co-operation from all and keeping aside our selfish needs will make all the difference. But unfortunately, everybody doesn't think alike and hence there is a need to frame some harsh and result-oriented laws.

Although small shopkeepers and vegetable vendors have done good work on restricting the use of plastic bags, there is still scope for better implementation.

The same needs to be done at molls and supermarkets.

Some superstore chains change ₹ 1 per bag and thus most people avoid taking plastic bags from them. Other too should do the same; in fact at an increased charge per bag.

Similarly, milk supplied in plastic bags can be delivered in reusable tins or bottles, which would further reduce the amount of plastic in circulation.

The BEST is recovering old bus stops, which is going to increase electricity consumption to a large extent. But the change is also quite necessary for beautification of the city. So why not use solar panels instead to light up the new stops?

mk.B.1stHlf12.22

Con. 12-VA-2218-12.

Let us put in efforts to save the city, the country and ultimately the planet.

Another suggestion: Each of us could plant a tree on our birthday every year.

Let's make Mumbai a city devoid of plastic, save energy, plant trees and keep the Earth green and clean.

Questions:

- (1) Why is it necessary to frame hash and result oriented laws against use of 6
