Mathematics tests

Mark scheme

for Paper 2

Tiers 3-5, 4-6, 5-7 and 6-8

National curriculum assessments

Introduction

The test papers will be marked by external markers. The markers will follow the mark scheme in this booklet, which is provided here to inform teachers.

This booklet contains the mark scheme for paper 2 at all tiers. The paper 1 mark scheme is printed in a separate booklet. Questions have been given names so that each one has a unique identifier irrespective of tier.

The structure of the mark schemes

The marking information for questions is set out in the form of tables, which start on page 11 of this booklet. The columns on the left-hand side of each table provide a quick reference to the tier, question number, question part and the total number of marks available for that question part.

The Correct response column usually includes two types of information:

- a statement of the requirements for the award of each mark, with an indication
 of whether credit can be given for correct working, and whether the marks are
 independent or cumulative
- examples of some different types of correct response, including the most common.

The Additional guidance column indicates alternative acceptable responses, and provides details of specific types of response that are unacceptable. Other guidance, such as when 'follow-through' is allowed, is provided as necessary.

Questions with a *UAM* element are identified in the mark scheme by an encircled *U* with a number that indicates the significance of using and applying mathematics in answering the question. The *U* number can be any whole number from 1 to the number of marks in the question.

For graphical and diagrammatic responses, including those in which judgements on accuracy are required, marking overlays have been provided as the centre pages of this booklet.

The 2008 key stage 3 mathematics tests and mark schemes were developed by the Test Development Team at Edexcel.

General guidance

Using the mark schemes

Answers that are numerically equivalent or algebraically equivalent are acceptable unless the mark scheme states otherwise.

In order to ensure consistency of marking, the most frequent procedural queries are listed on the following two pages with the prescribed correct action. This is followed by further guidance relating specifically to the marking of questions that involve money, negative numbers, algebra, time, coordinates or probability. Unless otherwise specified in the mark scheme, markers should apply the following guidelines in all cases.

What if ...

The pupil's response does not match closely any of the examples given.	Markers should use their judgement in deciding whether the response corresponds with the statement of requirements given in the Correct response column. Refer also to the Additional guidance.
The pupil has responded in a non-standard way.	Calculations, formulae and written responses do not have to be set out in any particular format. Pupils may provide evidence in any form as long as its meaning can be understood. Diagrams, symbols or words are acceptable for explanations or for indicating a response. Any correct method of setting out working, however idiosyncratic, is acceptable. Provided there is no ambiguity, condone the continental practice of using a comma for a decimal point.
The pupil has made a conceptual error.	In some questions, a method mark is available provided the pupil has made a computational, rather than conceptual, error. A computational error is a 'slip' such as writing $4 \times 6 = 18$ in an otherwise correct long multiplication. A conceptual error is a more serious misunderstanding of the relevant mathematics; when such an error is seen, no method marks may be awarded. Examples of conceptual errors are: misunderstanding of place value, such as multiplying by 2 rather than 20 when calculating 35×27 ; subtracting the smaller value from the larger in calculations such as $45 - 26$ to give the answer 21; incorrect signs when working with negative numbers.
The pupil's accuracy is marginal according to the overlay provided.	Overlays can never be 100% accurate. However, provided the answer is within, or touches, the boundaries given, the mark(s) should be awarded.
The pupil's answer correctly follows through from earlier incorrect work.	Follow-through marks may be awarded only when specifically stated in the mark scheme, but should not be allowed if the difficulty level of the question has been lowered. Either the correct response or an acceptable follow-through response should be marked as correct.
There appears to be a misreading affecting the working.	This is when the pupil misreads the information given in the question and uses different information. If the original intention or difficulty level of the question is not reduced, deduct one mark only. If the original intention or difficulty level is reduced, do not award any marks for the question part.
The correct answer is in the wrong place.	Where a pupil has shown understanding of the question, the mark(s) should be given. In particular, where a word or number response is expected, a pupil may meet the requirement by annotating a graph or labelling a diagram elsewhere in the question.

What if ...

The final answer is wrong but the correct answer is	Where appropriate, detailed guidance will be given in the mark scheme and must be adhered to. If no guidance is given, markers will need to examine each case to decide whether:			
shown in the working.	• the incorrect answer is due to a transcription error	If so, award the mark.		
	 in questions not testing accuracy, the correct answer has been given but then rounded or truncated 	If so, award the mark.		
	 the pupil has continued to give redundant extra working which does not contradict work already done 	If so, award the mark.		
	the pupil has continued, in the same part of the question, to give redundant extra working which does contradict work already done.	If so, do not award the mark. Where a question part carries more than one mark, only the final mark should be withheld.		
The pupil's answer is correct but the wrong working is seen.	A correct response should always be marked as correct scheme states otherwise.	t unless the mark		
The correct response has been crossed or rubbed out and not replaced.	Mark, according to the mark scheme, any legible cross work that has not been replaced.	ed or rubbed out		
More than one answer is given.	If all answers given are correct or a range of answers is correct, the mark should be awarded unless prohibited. If both correct and incorrect responses are given, no m	by the mark scheme.		
The answer is correct but, in a later part of the question, the pupil has contradicted this response.		mark given for one part should not be disallowed for working or answers ven in a different part, unless the mark scheme specifically states otherwise.		

Marking specific types of question

Responses involving money For example: £3.20 £7	
Accept ✓	Do not accept ×
✓ Any unambiguous indication of the correct amount eg f3.20(p), f3 20, f3,20, 3 pounds 20, f3-20, f3 20 pence, f3:20, f7.00	 Incorrect or ambiguous indication of the amount eg £320, £320p or £700p
 ✓ The unit, £ or p, is usually printed in the answer space. Where the pupil writes an answer outside the answer space with no units, accept responses that are unambiguous when considered alongside the given units eg with £ given in the answer space, accept 3.20	Ambiguous use of units outside the answer space eg with £ given in the answer space, do not accept 3.20p outside the answer space Incorrect placement of decimal points, spaces, etc or incorrect use or omission of 0 eg £3.2, £3 200, £32 0, £3-2-0, £7.0

Responses involving negative numbers For example: -2			
Accept ✓	Do not accept x		
	To avoid penalising the error below more than once within each question, do not award the mark for the first occurrence of the error within each question. Where a question part carries more than one mark, only the final mark should be withheld. * Incorrect notation eg 2-		

Responses involving the use of algebra For example: 2 + nn + 22n Take care! Do not accept x Accept ✓ ! Unconventional notation ✓ Unambiguous use of a different case or variable eg $n \times 2$ or $2 \times n$ or n2eg N used for nor n + n for 2nx used for n $n \times n$ for n^2 $n \div 2$ for $\frac{n}{2}$ or $\frac{1}{2}n$ 2 + 1n for 2 + n2 + 0n for 2 Within a question that demands simplification, do not accept as part of a final answer involving algebra. Accept within a method when awarding partial credit, or within an explanation or general working. **x** Embedded values given when solving equations eg in solving 3x + 2 = 32, $3 \times 10 + 2 = 32$ for x = 10To avoid penalising the two types of error below more than once within each question, do not award the mark for the first occurrence of each type within each question. Where a question part carries more than one mark, only the final mark should be withheld. ✓ Words used to precede or follow Words or units used within equations equations or expressions or expressions eg t = n + 2 tiles or eg n tiles + 2 tiles = t = n + 2n cm + 2for t = n + 2Do not accept on their own. Ignore if accompanying an

✓ Unambiguous letters used to indicate

eg t = n + 2 for n + 2

expressions

acceptable response.

expressions

x Ambiguous letters used to indicate

eg n = n + 2 for n + 2

Responses involving time A time interval For example: 2 hours 30 minutes						
Accept ✓	Take care! Do not accept x					
 ✓ Any unambiguous indication eg 2.5 (hours), 2h 30 ✓ Digital electronic time ie 2:30 	eg 2.3(h), 2.30, 2-30, 2h 3, 2.30 min The unit, hours and/or minutes, is usually printed in the answer space. Where the pupil writes an answer outside the answer space, or crosses out the given unit, accept answers with correct units, unless the question has specifically asked for other units to be used.					
A specific time For example: 8:40 am	17:20					
Accept ✓	Do not accept x					
✓ Any unambiguous, correct indication eg 08.40, 8.40, 8:40, 0840, 8 40, 8-40, twenty to nine, 8,40 ✓ Unambiguous change to 12 or 24 hour clock eg 17:20 as 5:20 pm, 17:20 pm	 Incorrect time eg 8.4 am, 8.40 pm Incorrect placement of separators, spaces, etc or incorrect use or omission of 0 eg 840, 8:4:0, 084, 84 					

Responses involving coordinates For example: (5, 7)					
Accept ✓	Do not accept ×				
✓ Unconventional notation eg (05, 07) (five, seven) x y (5, 7) ($x = 5, y = 7$)	Incorrect or ambiguous notation eg $(7,5)$ (7,5) (5x,7y) $(5^x,7^y)$ (x-5,y-7)				

Responses involving probability

A numerical probability should be expressed as a decimal, fraction or percentage only.

For example: 0.7 $\frac{7}{10}$ 70%

Accept ✓

✓ Equivalent decimals, fractions and percentages eg 0.700, $\frac{70}{100}$, $\frac{35}{50}$, 70.0%

✓ A probability correctly expressed in one acceptable form which is then incorrectly converted, but is still less than 1 and greater than 0

eg
$$\frac{70}{100} = \frac{18}{25}$$

Take care! Do not accept x

The first **four** categories of error below should be ignored if accompanied by an acceptable response, but should not be accepted on their own. However, to avoid penalising the first **three** types of error below more than once within each question, do not award the mark for the *first* occurrence of each type of error unaccompanied by an acceptable response. Where a question part carries more than one mark, only the final mark should be withheld.

A probability that is incorrectly expressed

eg 7 in 10 7 over 10 7 out of 10 7 from 10

- A probability expressed as a percentage without a percentage sign.
- A fraction with other than integers in the numerator and/or denominator.
- A probability expressed as a ratio eg 7:10, 7:3, 7 to 10
- ★ A probability greater than 1 or less than 0

Recording marks awarded on the test paper

All questions, even those not attempted by the pupil, will be marked, with a 1 or a 0 entered in each marking space. Where 2m can be split into 1m gained and 1m lost, with no explicit order, then this will be recorded by the marker as 1

The total marks awarded for a double page will be written in the box at the bottom of the right-hand page, and the total number of marks obtained on the paper will be recorded on the front of the test paper.

A total of 120 marks is available in each of tiers 3-5, 4-6, 5-7 and 6-8.

Awarding levels

The sum of the marks gained on paper 1, paper 2 and the mental mathematics paper determines the level awarded. Level threshold tables, which show the mark ranges for the award of different levels, will be available on the NAA website www.naa.org.uk/tests from Monday 23 June 2008.

1	Tier & Question 3-5 4-6 5-7 6-8		`					Rounding
1	4-6	5-/	ხ-8		Correct response	Additional guidance		
а				2m	912 800 990 849 1000	! Number matched to more than one nearest hundred For 2m or 1m, do not accept as a correct match		
				or 1m	Matches at least two numbers correctly			
ь				1m	Gives a value greater than or equal to 45 but less than 55	✓ Fractions or decimals× Value of exactly 55 given		
				1m	Gives a different value greater than or equal to 45 but less than 55 from any credited for the first mark			

	Tier & Question					Cuboid
3-5	4-6	5-7	6-8			
2					Correct response	Additional guidance
a				1m	6	
b				1m	2	
				1m	3	

	Tier & Question			Placing 4		
3		J ,			Correct response	Additional guidance
				1m	Indicates 40 in the correct position, ie	! Inaccurate indication Accept provided their indication is closer to the correct marker than any other
				1m	Indicates 40 in the correct position, ie 0 400	! Follow-through For the second mark, accept responses in which the distance between the arrow and zero is half as big as for the first mark

		uestio				Directions
4	4-0	3-7 0	-		Correct response	Additional guidance
a				1m	Indicates right then left	✓ Unambiguous indication eg, for part (a) • r then l
b				2m	Gives directions that state or imply the following four steps (or equivalent) in the correct order: 1. (Come out of house A and) turn right 2. (Take the) second road on the left 3. Turn right 4. (House C is on the) right	 ✓ For part (b), unambiguous description for step 2, ie 'second road on the left' eg Cross the junction then turn left At the next turning, go straight on, then turn left
				or		
				1m	Gives directions that state or imply all four steps, with not more than one error eg Right Left [indication of 'second' omitted] Right Right Right Turn right out of the house Take the second right (error) Take the first right The house is on the right	
					or	
					Gives directions that state or imply steps 2 and 3 above, even if steps 1 and/or 4 are incorrect or omitted	
					or	
				U1)	Gives correct directions for getting from house C to house A: 1. (Come out of house C and) turn left 2. (At the end of the road) turn left 3. Turn right 4. (House A is on the) left	

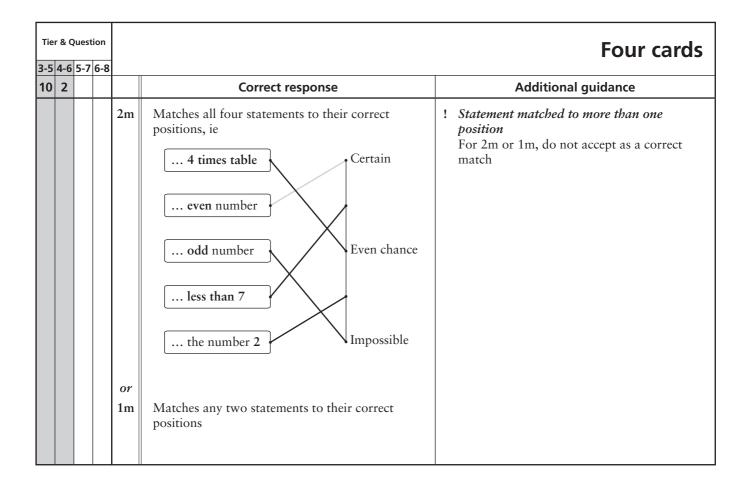

Tie	Tier & Question		Writing cheque			
3-5	5 4-0	6 5-7	6-8			
5					Correct response	Additional guidance
				1m	£ 102.70	! Non-standard notation Condone any unambiguous notation
				1m	£ 120.07	eg, for the first mark accept • £ $102 = 70$

Tier & Question 3-5 4-6 5-7 6-8				Theme park		
6					Correct response	Additional guidance
а				1m	8	
b				1m	7	
С				1m	5	

Tier & Questio			Adding odd
3-5 4-6 5-7 6 7	-8	Correct response	Additional guidance
	1m	Gives a correct counter example showing the sum of two odd numbers eg 1 + 3 = 4, which is even 5 and 7 makes 12 Odd = even + 1, so odd + odd = even + even + 2 = even	 ✓ Minimally acceptable example eg • 1 + 3 = 4 ✓ Odd numbers taken to be equal eg • 2 × 5 = 10 ! Response uses negative numbers and/or zero Accept negative odd numbers and zero as an even number within a correct response eg, accept • −1 + 1 = 0 ! Other calculations or general reasoning given alongside a correct response Ignore other calculations, even if they are incorrect or do not relate to the given statement If a correct counter example is given, ignore any general explanation unless it contradicts the counter example given × Incomplete or incorrect example eg • 1 + 3 = even • Odd + odd = even • Only odd + even = odd • 15 + 17 = 42

	Tier & Question				Calculating	
3-5	4-6	5-7	6-8			
8					Correct response	Additional guidance
а				1m	2134	
ь				1m	663768	

	Tier & Question					Time machine	
9	1				Correct response	Additional guidance	
				2m	6		
				or			
				1m	Shows the value 94 or the values 4 and 2 or Shows a complete correct method with not more than one computational error eg 100 - 46 - 48 100 - (46 + 48) 100 - 46 = 53 (error) 53 - 48 = 5	× For 1m, necessary brackets omitted eg • 100 – 46 + 48	

Tie	er & C	Quest	ion			Sleep
	4-6 3	5-7	6-8		Correct remonse	-
-	3				Correct response	Additional guidance
a	a			1m	11	× -11
b	b			or 1m	7pm or 19:00 Shows or implies that 12 hours' sleep are needed eg 12 seen (30 - 6) \div 2 30 - 6 = 24, 24 \div 2	! Incorrect notation for time Condone eg, for 2m accept

	& Que				Sorting shape
12	4-6 5- 4	-7 6-8		Correct response	Additional guidance
			2m	Gives the three letters B, C and D in the correct places in the table, ie	✓ Unambiguous indication
				A D	
				В С	× Any letter repeated in an incorrect place in
					the table
			or		eg, for 1 mark
			1m	Gives at least two of the letters in the correct places in the table, with not more than one error	A A (error) D
				or omission	В С
					eg, for 0 marks
					A A (error) D
			I II		C (error) B C

	Tier & Question		Snopping			
3-5 13		5-7	6-8		Correct response	Additional guidance
a	a			1m	£ 1.15	
Ь	b			1m	5	! Reference to remainder Condone reference to the correct amount of money left over eg, accept • 5 with 20p change • 5 r 20 eg, do not accept • 5.5() or 5.6 • 5 with 55p change

L			uest 5-7	ion 6-8			Speedometer
1	4	6				Correct response	Additional guidance
	а	a			1m	Indicates the correct value on the scale, ie 40 60 80 mph 100	! Inaccurate indication Accept provided their marker would touch the circumference of the dial within 2mm of the correct position, if extended
	b	b			1m	40	

Tier & Question 3-5 4-6 5-7 6-8		Football survey
15 7	Correct response	Additional guidance
2r	Gives the value 3 in the key and completes 3 circles for each of the Yes and No rows	! Circles not shaded, or inaccurate in size Accept provided the pupil's intention is clear
0: 1r		

	Tier & Question							
16					Correct response	Additional guidance		
				1m	750			
				1m	100			
				1m	$\frac{1}{5}$ or equivalent fraction or decimal			

Tier	& Q	uest	ion			Double shape
3-5 4 17	4-6 9	5-7	6-8		Couract varmons	<u>.</u>
	a			1m	Indicates Yes and gives a correct explanation The most common correct explanations:	! Incorrect units Condone eg, accept • 18cm, 9cm • 18², 9²
					Show or imply the correct areas eg The area of the rectangle is 18, the area of the square is 9 and 9 × 2 = 18 A is 18 and B is 18 ÷ 2 = 9	✓ Minimally acceptable explanation eg • 18, 9 • 2 × 9 (or double 9), 9 • 18, 18 ÷ 2
						 Incomplete explanation eg The area of the rectangle is 18
					Refer to the space taken up by each shape eg Two of the squares can fit inside the rectangle If you draw a line down the middle of the rectangle, you get two of the squares A holds twice as many squares as B	 ✓ Minimally acceptable explanation eg A holds two squares You cut A in half to get B Rectangle divided into two squares on the diagram I counted the squares inside the shapes
						 Incomplete explanation eg The area of A is twice the area of B B is half of A He's just added another shape on I counted the squares
					Refer to the ratio of lengths together with the equal widths eg They are the same width but the rectangle is twice as long as the square 6 × 3 is twice 3 × 3	 ✓ Minimally acceptable explanation eg • Equal width, but the length is doubled • Same height, but width is twice as long • 6 × 3, 3 × 3
						 Incomplete explanation eg The rectangle is twice as long as the square Because A is 6 squares long and B is 3 squares long

Tie	er & C)uest	tion			Double shape (cont)
3-5 17	4-6 9	5-7	6-8		Correct response	Additional guidance
Ь	b			1m	Indicates No and gives a correct explanation The most common correct explanations:	! Incorrect units Condone eg, accept • 18cm², 12cm²
					Show or imply the correct perimeters eg ■ The perimeter of the rectangle is 18, the perimeter of the square is 12 but 2 × 12 ≠ 18 ■ 2 × 9 is not twice 2 × 6	✓ Minimally acceptable explanation eg • 18, 12 • 2 × 9, 2 × 6 • 12 + 6, 12 • It's 6cm more but that's not double 12
						 Incomplete or incorrect explanation eg The perimeter of the rectangle is 18 Area A = 18, area B = 12
					Refer to the distance around each shape eg The length around the edge of the square goes more than halfway round the edge of the rectangle	 ✓ Minimally acceptable explanation eg • It's less than double the perimeter of the square • B's perimeter is more than half A's • I counted the distance round the sides
						 Incomplete explanation eg The perimeter of A is not double the perimeter of B
					Refer to the rectangle's additional lengths eg You only add two of the square's sides to get the rectangle, not all four It's increased by 50%, not doubled You join two squares, but two of their sides will be touching	 ✓ Minimally acceptable explanation eg It has two extra lengths of 3, not four It's half as long again These sides are hidden
				(U1)		 Incomplete explanation eg It has two extra sides

Tier & Question 3-5 4-6 5-7 6-8			Cube edges
18 10 1		Correct response	Additional guidance
	2m or 1m	Completes the table correctly to show the further 5 ways with no errors or duplicates, ie Ways of moving from A to H A \rightarrow B \rightarrow C \rightarrow H A \rightarrow B \rightarrow G \rightarrow H A \rightarrow D \rightarrow C \rightarrow H A \rightarrow D \rightarrow E \rightarrow H A \rightarrow F \rightarrow E \rightarrow H A \rightarrow F \rightarrow G \rightarrow H [rows in any order]	 ✓ Unambiguous indication eg, for A → B → G → H • ABGH ! Correct vertices, but in an incorrect order eg, for A → B → G → H • A → G → B → H Do not accept as a correct way

	Tier & Question 3-5 4-6 5-7 6-8				Track	
	11				Correct response	Additional guidance
a	a	a		1m	5	! Response assumes the piece of track shown has already been counted For answers of 4 for part (a) followed by
ь	ь	b		1m	6	5 for part (b), mark as 0, 1

	Tier & Question 3-5 4-6 5-7 6-8				Matching expressions
20 12		0-0		Correct response	Additional guidance
			2m or 1m	Matches all four statements correctly, ie $ \begin{array}{c} 2 \\ 2-a \\ \hline a+2 \\ \hline a-2 \\ \hline \end{array} $ Matches three of the statements correctly	! Statement matched to more than one expression For 2m or 1m, do not accept as a correct match

L	Tier & Question 3-5 4-6 5-7 6-8					Area
21	13	4			Correct response	Additional guidance
				1m	Gives both correct areas, ie 9 then 3	

Tier & Question 3-5 4-6 5-7 6-8			`					
_	14		0-8		Correct response	Additional guidance		
a	a	a		1m	6	! Incomplete processing Penalise only the first occurrence eg, for parts (a) and (b)		
b	b	b		1m	-2	* 9 – 3 4 – 6 Mark as 0, 1		

Tie	r & O	uest	ion			
		5-7				Symmetry patterns
	15				Correct response	Additional guidance
а	a	a		1m	Indicates two squares so that the shape has rotation symmetry of order 4, ie	✓ Unambiguous indication
b	b	b		1m	Indicates four squares in total [that include the same two squares required in part (a)] so that the shape has rotation symmetry of order 2 eg	! For part (b), response uses part squares Accept provided the intended symmetry is clearly correct

Tier & Qu	estic	on			Shop		
-5 4-6 5	5-7 6	5-8			3110p		
4 17	7			Correct response	Additional guidance		
			2m	£ 196.25			
			or				
			1m	Digits 19625 seen	Markers may find the following useful:		
				Shows or implies the correct subtotals of pay for the hours worked at 6.35, or pay for the hours worked at 7.5(0) eg 158.75 25 × 6.35 37.5(0) 5 × 7.5(0) 15 and 22.5(0) seen or Shows the values 44.45, 40.4(0) and 22.5(0)	Mon $7 \times 6.35 = 44.45$ Tues $7 \times 6.35 = 44.45$ Wed $4 \times 6.35 = 25.4$ and $2 \times 7.5 = 15$ or $4 \times 6.35 + 2 \times 7.5 = 40.4(0)$ Thur $7 \times 6.35 = 44.45$ (Fri 0) Sat $3 \times 7.5 = 22.5$ no. of hours pay per worked hour total $25 = 6.35 = 158.75$ 5 = 7.5(0) = 37.5(0) or $2 = 7.5(0) = 15(.00)$ 3 = 7.5(0) = 22.5(0)		
			①1)	Shows or implies a complete correct method with not more than one computational error eg 7 + 7 + 4 + 7 = 26 (error), 26 × 6.35 + 5 × 7.5(0) = 202.60 or Gives an answer of 193.95 or 200.85 [the only error is to assume 6.35 or 7.50 for all hours on Wednesday]			

Tier & Question			Using algebra			
25 1		0-0		Correct response	Additional guidance	
			1m	n + 2	! Unsimplified expression or unconventional notation eg, for Jo's age • n + 1 + 1 • 1n + 2 eg, for Kate's age • 2 × (n + 2) • n × 2 + 4 Condone	
			1m	2(n+2) or 2n+4	! For the second mark, follow-through Accept follow-through as 2 × their algebraic expression for Jo's age provided there are no other errors eg, from Jo's age as 2n accept • 4n • n × 4	
					x For the second mark, incomplete processing eg	
					 For the second mark, necessary brackets omitted eg 2 × n + 2 2(n + 2) 	

	Tier & Question					Goldbach		
26					Correct response	Additional guidance		
a	a	a		1m	Gives a pair of prime numbers that sum to 16, ie 3 and 13, in either order or 5 and 11, in either order			
				1m (U1)	Gives a different pair of prime numbers that sum to 16 from any credited for the first mark	 Values credited for the first mark repeated but in reverse order 		
b	b	b		1m	Completes the sentence correctly, giving an even number greater than 16 and a correct pair of prime numbers that sum to their number eg even number 20 prime numbers 7 and 13 even number 22 prime numbers 11 and 11 even number 50 prime numbers 3 and 47	* Their even number is less than or equal to 16 Markers may find the following values useful: Prime numbers up to 100 2, 3, 5, 7 11, 13, 17, 19 23, 29 31, 37 41, 43, 47 53, 59 61, 67 71, 73, 79 83, 89 97		

Tier & Question 3-5 4-6 5-7 6-8				Side length
19			Correct response	Additional guidance
		2m	6.3 or equivalent	
		or 1m	Shows the value 25.2 or equivalent or Shows a complete correct method with not more than one computational error eg $8.4 \times 3 \div 4$ $(8.4 + 8.4 + 8.4) \div 4$	 For 1m, necessary brackets omitted eg 8.4 + 8.4 + 8.4 ÷ 4
		U1)	■ 8.4 + 8.4 + 8.4 = 25.6 (error), 25.6 ÷ 4 = 6.4	

_						
	Tier & Question					Value of x
	20				Correct response	Additional guidance
	a	a	a	1m	Indicates one particular number, ie	
	b	b	ь	(U1) 1m	Indicates any number at all, ie	

	Tier & Question				Darts	
3-5	4-6	5-7	6-8			
	21	12	2		Correct response	Additional guidance
				1m	Gives all three correct numbers, ie 10, 15 and 20 [any order]	
					10, 13 and 20 (any order)	

Tier &			╛		Conversions
3-5 4-6	-	-7 6- 3 3		Correct response	Additional guidance
			1m	Gives a correct explanation The most common correct explanations:	 Explanation does not use the values in the given table eg 1 ounce is more like 28g They only use 25g as roughly equal, so those values are not accurate
					! Explanation states or implies what values 'should be' or that the table is 'incorrect' Condone
				Show the values in grams do not consistently go up/down in steps of 25 per ounce eg It goes up in 25s until the step from 3 to 4 ounces when it suddenly goes up 35 It should go from 150g down to 125g, but it's 110g instead	 ✓ Minimally acceptable explanation eg • It goes up in 25s at first but then changes • It goes up 25, 25, 35, 40 and so it is not a steady pattern • It should go 25, 50, 75, 100 • The numbers should go up by the same amount each time
					 Incomplete explanation eg 25, 25, 35, 40 4 ounces should be 100g and 10 ounces should be 250g They don't go up in proportion
				Show that the relationship between two values in grams is not what other values would predict eg If 1 ounce is 25g, then 4 ounces should be 25 × 4 = 100g not 110g If 5 ounces is 150g, then 10 ounces should be 150 × 2 = 300g not 275g 10 ounces in grams should be 25 × 10 = 250, but it is 275 in the table	 ✓ Minimally acceptable explanation eg 25 × 4 ≠ 110 4 should be 25 × 4 = 100 150 × 2 ≠ 275 If 5 is 150, then 10 should be 300 50 ÷ 2 ≠ 150 ÷ 5 10oz should equal double 5oz but it doesn't
			(U1)	■ $50 \div 2 = 25$, but $150 \div 5 = 30$	 Incomplete explanation eg 1 ounce is 25g so 4 ounces shouldn't be 110g 5 ounces = 150g, but 10 ounces = 275g

	Tier & Question				Concorde
3-5 4-6	_	7 6-8 1 4		Correct response	Additional guidance
			2m	1200	
			or 1m	Shows or implies a correct rate, other than 1 mile every 3 seconds, even if it doesn't use single units of time eg 20 (miles) per minute 1 / (mile) in a sec 10 miles in 30 seconds 60 miles every 3 mins or Shows or implies a complete correct method with not more than one computational or rounding error eg 20 × 60 20 × 60 3 × 60 1 ÷ 3 = 0.33 (premature rounding) 0.33 × 60 ² = 1188	 ! For 1m, unit(s) abbreviated Condone provided unambiguous within the context of the question eg, for 1m accept • 20m per min • 1/3 m/s [miles implied by given context] eg, for 1m do not accept • 20m per m [ambiguity between miles and minutes]

	Tier & Question 3-5 4-6 5-7 6-8		Counters in a ba		Counters in a bag	
-		5-7 15	6-8 5		Correct response	Additional guidance
				2m	Completes the sentence correctly with three positive integers r , w then y , such that $w = 2r$ and $y < r$ eg 2, 4 then 1 3, 6 then 1 or 2 4, 8 then 1, 2 or 3	
				or		
				1m	Completes the sentence with three integers r , w then y , such that $w = 2r$ and $y = 0$ eg 2, 4 then 0 3, 6 then 0	 ★ For 1m, values for r or w negative or zero eg ← -1, -2 then 0 ← 0, 0 then 0
					Completes the sentence with three values r , w then y between zero and one, such that $r > \frac{1}{4}$, $w = 2r$ and $r + w + y = 1$ eg 2 $\frac{2}{7}$, $\frac{4}{7}$ then $\frac{1}{7}$ 0.3, 0.6 then 0.1	

	Tier & Question 3-5 4-6 5-7 6-8				Perimeters	
-	25				Correct response	Additional guidance
	a	a	a	1m	7a + 3	! Unsimplified expression or unconventional notation eg • \frac{42a + 18}{6} • (42 \times a + 18) \div 6 Condone * Necessary brackets omitted eg • 42a + 18 \div 6
	Ь	b	Ь	1m	5	
	С	c	С	1m	24	! Units given Ignore, even if incorrect for a perimeter eg, accept • 24cm • 24cm² * Incomplete processing eg • 4 × 6

	b	b	Ь	1m	5050	

Tier & Question		Isosceles triangle Additional guidance	
3-5 4-6 5-7 6-8 29 21 10	Correct response		
2	Gives $x = 74$, $y = 32$ and $z = 46$ and gives a correct reason for each angle The most common correct reasons:		
	For angle <i>x</i> , refer to the isosceles triangle eg It is an isosceles triangle, so it is equal to angle ADB The triangle is isosceles so it is the same as the 74° angle marked	 ✓ Minimally acceptable reason eg • Isosceles × Incomplete reason without the correct geometrical property identified eg • It is equal to angle ADB • It is the same as the 74° angle marked 	
	For angle y, refer to angles in a triangle eg Angles in a triangle, so $180 - 74 - 74$ 74 + 74 = 148 and 180 – 148 because they add up to 180 in a triangle	 ✓ Minimally acceptable reason eg Angles in a triangle ! Follow-through from their x For angle y, accept 106 – their x accompanied by a correct reason × Incomplete reason without the correct geometrical property identified eg 180 – 74 – 74 74 + 74 = 148 and 180 – 148 	
	For angle z, refer to angles in a triangle and angles on a straight line or just angles in a triangle or exterior angle of a triangle eg Angles in a triangle, 180 – 28 – 74 – 32 Angles on a straight line, 180 – 74 = 106, angles in a triangle, 180 – 106 – 28 Exterior angle of a triangle, 74 – 28	 ✓ Minimally acceptable reason eg Angles in a triangle Angles on a straight line and angles in a triangle Exterior angle of a triangle ! Follow-through from their x and their y For angle z, accept 152 – their x – their y accompanied by a correct reason x Incomplete reason without the correct geometrical property identified eg 180 – 28 – 74 – 32 180 – 74 = 106, 180 – 106 – 28 	
	Or Gives two correct angles with a correct reason for each or	✓ For 1m, follow-through Accept follow-through for each angle as detailed above	
	Gives all three correct angles, even if reasons are incorrect or omitted		

Tie	Tier & Question		ion			Journeys	
3-5	30 20 11			II	_		
	30	a	a	1m	Correct response Gives all four names in the correct order, ie Chris Dee Ann Ben	Additional guidance ✓ Unambiguous indication eg • C D A B	
		b	b	or 1m	Joins the points (0, 0), (15, 1), (30, 1.5) and (60, 4) with straight lines, ie 4 4 3 2 1 1 0 10 20 30 40 50 60 Indicates at least two of the points (15, 1), (30, 1.5) and (60, 4) on the graph, even if they are not joined or are joined incorrectly or Shows or implies all three sets of coordinates (15, 1), (30, 1.5) and (60, 4) in working, even if the graph is incorrect or omitted	! Lines not ruled or accurate Accept provided the pupil's intention is clear ! For 1m, follow-through from their (15, 1) with an incorrect y-value For an incorrect y-value between 0.5 and 3 inclusive, accept their (30, 1.5) as (30, their incorrect y-value + 0.5) eg, for 1m accept 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	
		С	С	1m	5	! Follow-through from their graph in part (b) Provided their line for the final section of the graph has a positive gradient and passes through (60, 4), accept follow-through as 2 × (4 – their <i>y</i> -coordinate for (30, 1.5))	

Tier &	Tier & Question				Special offer	
3-5 4-0					•	
	2	2 12	2	Correct response	Additional guidance	
			2m	Indicates Both paid the same and gives a correct justification eg ■ Marie paid 96 - 9.60 = 86.40 Richard paid 108 - 21.60 = 86.40 ■ 0.9 × 96 = 86.4 0.8 × 108 = 86.4	 ✓ For 2m, minimally acceptable justification eg 96 – 9.6(0), 108 – 21.6(0) 0.9 × 96, 0.8 × 108 86.4(0) x For 2m or 1m, incomplete justification 	
			or		• 10% off 96 is the same as 20% off 108 • It works out to be the same	
			1m U1	Gives a correct justification but makes an incorrect or no decision or Gives a correct justification with not more than one computational or rounding error, but follows through to make their correct decision eg • Marie paid 96 – 9.60 = 87.4(0) (error) Richard paid 108 – 21.60 = 86.4(0) [indicates Marie]	x For 1m, conceptual error eg • 20% off 108 = 108 − (108 ÷ 20) = 108 − 5.40 = 102.60	

	Tier & Question			Marking overlay available	Planes	
3-5 4-6		ნ-8 13		Correct response	Additional guidance	
	a	a	1m	Indicates the correlation is positive	! Positive qualified Ignore eg, accept • Strong positive • Direct positive * Sign of correlation not indicated eg • High • Strong ! Relationship quantified Ignore alongside a correct response * Relationship described without reference to correlation eg • The greater the wingspan, the more passengers it can hold	
	b	b	1m	Draws a line of best fit within the tolerance, and at least of the length, as shown on the overlay	 ! Line not ruled or accurate Accept provided the line is within tolerance, and at least of the length required ! Line of best fit is incorrect beyond the dashed lines on the overlay Condone eg, accept • A correct line of best fit that is then joined to the origin 	
	С	c	2m or 1m	3600 to 5200 inclusive Shows a value between 180 and 260 inclusive or Shows a value that follows through from their line of best fit eg Their line passes through the point (40, 280), final answer: 5600	! For 1m, range for follow-through value If their line goes through $(40, y)$ accept follow-through as $20 \times (y \pm 10)$ provided their line always has a positive gradient

	2m	n 27	
	or 1m		

Tier & Question		Best buy
3-5 4-6 5-7 6-8 25 15	Correct response	Additional guidance
Or and the second secon	and gives a correct justification, based on correctly calculating a pair of comparable values The most common justifications: Compare pence (or pounds) per gram eg 159 ÷ 454 = 0.35() 125 ÷ 340 = 0.36() (or 0.37) Compare grams per penny (or per pound) eg 454 ÷ 159 = 2.8() (or 2.9) 340 ÷ 125 = 2.7(2) 454 ÷ 1.59 = 285.() (or 286) 340 ÷ 1.25 = 272 Reason proportionally using the prices eg 125 ÷ 340 × 454 = 166.() (or 167) That's more than 159 159 ÷ 454 × 340 = 119.(), which is < 125 1.59 × 340 = 540(.6) (or 541) 1.25 × 454 = 567(.5) (or 568) 2 × 340 = 680g, which is £2.50 1.5 × 454 = 681g, which is only £2.39 4 × 340g = 1360g for £5 3 × 454g = 1362g for £4.77 If A were decreased by 114g its price should go down by 40p (or 39.()p), but the difference is 34p so it's a worse reduction 454 - 340 = 114g, £1.59 - £1.25 = 34p but \$\frac{114}{340} \times 1.25 = 42p (or 41.()p) Shows a correct pair of comparable values but makes an incorrect or no decision or Shows correct calculations for a pair of comparable values, with not more than one error if evaluation is attempted, then follows through to make their correct decision eg 159 ÷ 454 and 125 ÷ 340, so A 454 ÷ 159 = 2.8() 340 ÷ 125 = 27.2 (error), so B	✓ For 2m, correct decision and any pair of comparable values shown Note that common pairs are: 0.35() and 0.36() or 0.37 (p per g) 0.0035() and 0.0036() or 0.0037 (£ per g) 2.8() or 2.9 and 2.7(2) (g per p) 2.85.() or 286 and 272 (g per f) 159 and 166.() or 167 (p per 454g) 119.() and 125 (p per 340g) 540(.6) or 541 and 567(.5) or 568 (£ per 154 360g) 34 and 39.() or 40 (p for 114g extra compared to A) 34 and 41.() or 42 (p for 114g extra compared to B) ! Correct decision and comparison is per 454g or per 340g but given price is not restated Condone eg, for 2m accept • 125 ÷ 340 × 454 = 167 ! Correct decision but units omitted, incorrect or inconsistent Condone provided any values used to make a decision are comparable eg, for 2m accept • 1.59 ÷ 454 = 0.35 1.25 ÷ 340 = 0.37 ! Additional incorrect working Ignore x For 2m or 1m, incomplete justification eg • 454 − 340 = 114g £1.59 − £1.25 = 34p Therefore jar A because you get 114g more for only 34p extra x For 2m or 1m, comparable values, or the method to calculate them, not shown eg • The big jar is 8p cheaper

Tier & Question 3-5 4-6 5-7 6-8		Shadows
26 16	Correct response	Additional guidance
21	m 4.2 or equivalent	
o 1r	2 3	! For 1m, value rounded For $\frac{2}{3}$, accept 0.66() or 0.67

		Quest			1, 2, 4
3-5	4-6	5-7 27		Correct response	Additional guidance
			3m	Gives a complete correct response that satisfies all four of the following conditions: 1. Indicates that A is 8 2. Indicates that B is 7 3. Indicates that C is 8 4. Shows or implies correct substitution at least for value C eg 4(4 ² - 3 × 4 + 8) 6 4 × 12 6 48 ÷ 6	
			or 2m	Gives a response that satisfies three of the four conditions	
			or 1m	Gives a response that satisfies two of the four conditions	

Tier & 0				Triangles
3-5 4-6	6-8 18		Correct response	Additional guidance
	a	2m	14.4(), or 4√13, or √208	 ! Value of 14 Do not accept unless a correct method or a more accurate value is seen * For 2m or 1m, method uses accurate or scale drawing
		or 1m	Shows a correct method that indicates at least the intention to square and subtract the two given lengths eg 17² – 9² 289 – 81 208 seen	
	Ь	2m	7.8 or 7.79()	! Value of 8 Do not accept unless a correct method or a more accurate value is seen * For 2m or 1m, method uses accurate or scale drawing
		1m	Shows or implies a correct trigonometric ratio involving not more than one unknown eg • Answer of 7.7 • 12 tan 33 • tan $33 = \frac{DF}{12}$ • tan $33 = 0.6$ (premature rounding), $12 \times 0.6 = 7.2$ • tan $57 = \frac{12}{x}$! For 1m, no indication of which angle is being considered eg • tan = $\frac{DF}{12}$ For 1m, accept only if the trigonometric ratio is correct for the given angle DEF

Tier & Question				Box plots	
3-5 4-6 5-7	7 6-8 19		Correct response	Additional guidance	
	a	1m	6	, taditional galdanico	
	b	1m	Gives a correct justification eg Median for year 10 = 56, Median for year 11 = 65, 65 - 56 = 9 The medians are the vertical lines inside the grey boxes, they are $4\frac{1}{2}$ divisions apart and this is 9 marks since 1 division = 2 marks	 ✓ Minimally acceptable justification eg 56, 65 The medians are the vertical lines inside the boxes and they are 9 marks apart There is a gap of 9 [with both medians indicated on the graph] ! Ambiguous notation eg 56 – 65 Condone x Incomplete justification eg The difference between the medians is 9 marks on the graph 	
	c	1m	Indicates Yes and gives a correct explanation, referring to the inter-quartile range eg Inter-quartile range for year 10 = 33, Inter-quartile range for year 11 = 18, so year 11 was more consistent The middle half of the year group was less spread out for year 11 than for year 10 The grey box shows the inter-quartile range and it is shorter for year 11	 ✓ Minimally acceptable explanation eg 33, 18 Its inter-quartile range is 15 less The IQ range is smaller The IQ range is bigger for year 10 The box is shorter (or smaller) For Y10: 43 to 76, for Y11: 51 to 69 It is shorter [distance between upper and lower quartiles indicated on both box plots] ! 'Inter-quartile range' referred to as 'range' within an otherwise correct explanation	

Tier & Qu	ier & Question				Circle graph
-5 4-6 !		6-8 20		Correct response	Additional guidance
		а	2m	Completes both pairs of coordinates correctly, ie	
				(3, 4) and $(3, -4)$, in either order	
			or 1m	Completes either pair of coordinates correctly or Shows the value 16 or Shows or implies a correct method for finding the value of <i>y</i> eg	
		b	1m	$y^2 = 25 - 3^2$	\times -5 or \pm 5
		С	2m	Gives P as (3.5, 3.5)	! For 2m, gives P as (-3.5, -3.5) Condone x For 2m, equivalent fractions or decimals
			or 1m	Shows the value 3.5() or 12.5 or equivalent or Shows or implies a correct method for finding the value of x or y eg 2 $y^2 = 25$ $x^2 = 25 \div 2$	

I-6	5-7	6-8			Giant panda
		21		Correct response	Additional guidance
			2m	1100	! For 2m upper bound used Since pupils could assume 1600 is given to the nearest 100 in the context of the question, accept use of upper bound provided a correct method is seen eg, for 2m accept • 1650 ÷ 140 × 100, answer: 1200
			or		
			1m	Shows the digits 11()	
				or	
				Shows or implies a complete correct method eg	 ✓ For 1m, lower and/or upper bound used within a correct method eg, for 1m accept • 1650 ÷ 140 × 100 • 1550 ÷ 1.4

Tier & Q	Tier & Question			Prism
3-5 4-6	5-7 6	5-8	"	
	2	22	Correct response	Additional guidance
			$6.9()$, or $4\sqrt{3}$, or $\sqrt{48}$! Value of 7 Do not accept unless a correct method or a more accurate value is seen
			Shows or implies a correct method with not more than one computational or rounding error eg $\sqrt{32 + 16}$ $\sqrt{32} = 5.6$ (rounding error) $AC^2 = 5.6^2 + 4^2$ $AC = 6.8()$ $\sqrt{32} = 6$ (premature rounding) $\sqrt{36 + 16} = 7.2$	× For 3m, 2m or 1m, method uses accurate or scale drawing
		1	Shows sufficient working to indicate correct application of Pythagoras' theorem for at least one triangle eg 4² + 4² 2 × 16 5.6() or 5.7 seen (Their BC)² + 4²	

Tier & Que			Number cards
3-5 4-6 5-	23	Correct response	Additional guidance
	2n	Gives all three correct values, ie	
		15 20 25 in any order	
	01		
	1n	Gives any two correct values, with not more than one error or omission	
		or	
		States or implies that <i>n</i> is a multiple of 5 and that there are $\frac{n}{5}$ square numbers eg There must be 1 out of 5, 2 out of 10, 3 out of 15 etc for the fraction to be right 1 2 3 4 5, but should be only one 6 7 8 9 10, but should be only two 11 12 13 14 15, correct	! For 1m, minimally acceptable implication For 1m, accept responses in which there are at least three examples using multiples of 5, (with no examples not using multiples of 5) and some square numbers identified, even if there are errors or omissions eg • 1, 2, 3, 4, 5, so n could be 5 6, 7, 8, 9, 10, so n could be 10 11, 12, 13, 14, 15

Tier & Question				Window		
3-5 4-	-6 5-7	6-8 24		Correct response	Additional guidance	
			3m	Gives an integer value between 3925 and 3928 inclusive	3	
			or 2m	Shows a non-integer value between 3925 and		
				3927.5 inclusive [rounding to the nearest whole number omitted]		
				or		
				Shows an integer value between 7850 and 7855 inclusive [division of whole circle area by 2 omitted]		
				or		
				Shows or implies a complete correct method with not more than one error, and follows through to give their value correct to the nearest whole number	* For 2m or 1m, conceptual error eg • $\pi \times 100 \div 2 = 157$	
				eg $1m \div 2 = 50 \text{cm},$ $\frac{\pi \times 50^2}{2} = \frac{integer \ response \ outside}{correct \ range}$	× For 2m uses a radius of 25 or 0.25	
				■ $\pi \times 0.5 \times 0.5 = 0.79$ (premature rounding), $0.79 \div 2 = 0.395$, $0.395 \times 10000 = 3950$ ■ $\frac{\pi \times 0.5^2}{2} \times 100$ (error) = 39		
			or			
			1m	Shows a non-integer value between 7850 and 7855 inclusive		
				or		
				Shows the value 0.39() or equivalent [ie, the correct area in m ²]		
				or		
				Shows or implies a complete correct method with not more than one error but fails to follow through to give their value correct to the nearest whole number eg		
				1m ÷ 2 = 50cm, $\frac{\pi \times 50^2}{2} = \frac{\text{non-integer response outside}}{\text{correct range}}$ $\pi \times 25^2 (\text{error}) \div 2 = 981.75$
