Dissolves in water to form an acidic Dissolves in water for form an all solution	caline
ive one example of elements A and B	(2 marks)
TVC OTE CARRIAGE OF CICINGIST CONTROL OF	North Control of the
A piece of blue flower was dropped into the first test-tube. Explain why the flo bleached.  The second test-tube was corked and exposed to sunlight. After a few days, it	(2 marks)
contain gas that rekindled a glowing splint.	
Write an equation for the reaction which produced the gas	(1 mark)
Write the electronic configuration of calcium (atomic number 20) and beryllium     Calcium	(atomic number 4) (½ mark)
	(½ mark)
Beryllium	
Beryllium	
	(2 marks)

7. State and explain how the rate of reaction between zinc granules and steam can be increased

8. The apparatus shown below was set up to prepare and collect hydrogen sulphide gas?

a) Name solid C2

(1 mark)

b) Give a reason why warm water is used

(1 mark)

- c) What observation would be made if hydrogen sulphide gas was bubbled into a solution of lead II nitrate? (1 mark)
- Use the reactions given below to answer the questions that follow (The letters do not represent the actual symbols of the elements)

$$\begin{split} &D_{(s)}^{} + E^{2+}_{(aq)} \rightarrow D^{2+}_{(aq)} + E_{(s)}^{} \\ &D_{(s)}^{} + 2F^{+}_{(aq)}^{} \rightarrow D^{2+}_{(aq)}^{} + 2F_{(s)}^{} \\ &E_{(s)}^{} + 2F^{+}_{(aq)}^{} \rightarrow E^{2+}_{(aq)}^{} + 2F_{(s)}^{} \\ &G_{(s)}^{} + E^{2+}_{(aq)}^{} \rightarrow G^{2+}_{(aq)}^{} + E_{(s)}^{} \\ &G_{(s)}^{} + D^{2+}_{(aq)}^{} \rightarrow \text{No reaction} \end{split}$$

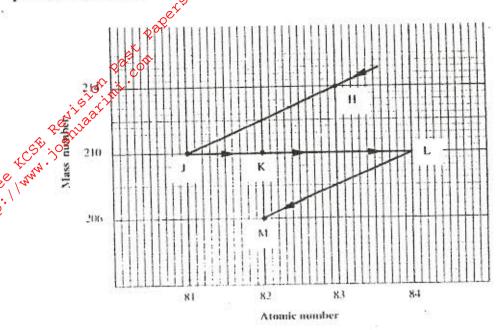

a) What name is given to the type of reactions given above?

(1 mark)

- Arrange the elements D, E, F and G in order of their reactivity starting with the most reactive
- c) Complete the equation below

 $G_{(s)} + 2F^{+4} \rightarrow$ 

(1 mark)

- b) Write an equation for the nuclear reaction that occurs when isotope J changes to isotope K
- c) Identify a pair of isotopes of an element in the decay series (1 mark)
- 11. In an experiment, sulphur dioxide gas was bubbled into water followed by chlorine gas. The resulting clear solution gave a while precipitate when mixed with acidified barium chloride solution. (3 marks) Explain these observations

13. Use the equations below to answer the questions that follow

$$Cl_{(s)} \rightarrow Cl_{(s)} \rightarrow KCl_{(s)}; \Delta H_1 = -701 \text{kJmol}^{-1}$$

$$Kl_{(sq)} \rightarrow Kl_{(sq)} \rightarrow Kl_{(sq)}; \Delta H_2 = +15 \text{kJmol}^{-1}$$

What is the name of  $\Delta H_1$ ?

(1 mark)

Calculate the heat change for the process: 
$$K^+_{(g)} + C\Gamma_{(g)} \xrightarrow{H_2O_{(1)}} K^+_{(aq)} + C\Gamma_{(aq)}$$
 (2 marks)

- 14. Iron is extracted from its ore by the blast furnace process
  - a) Name one ore from which iron is extracted

(1 mark)

- b) One of the impurities in iron ore is removed in the form of calcium silicate. Write an equation for the reaction in which calcium silicate is produced
- 15. When carbon dioxide gas was passed through aqueous calcium hydroxide, a white suspension was formed.
  - Write an equation for the reaction that took place

(1 mark)

- State and explain the change what would occur when excess carbon dioxide gas is bubbled through the white suspension.
- 16. With reference to iodine, distinguish between covalent bonds and Van der Waals forces

(3 marks)

The structure below represents a portion of a polymer

$$... - \begin{matrix} CH_3 & CH_3 & CH_3 \\ & & & \\ C & - & CH_2 - & C - & CH_2 - & C - & CH_2 - ... \\ & & & & \\ COOCH_3 & COOCH_3 & COOCH_3 \end{matrix}$$

Give

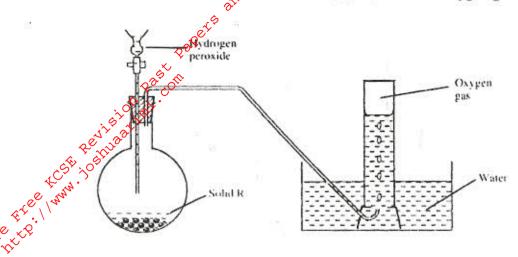

- a) the name of the polymer
- b) one industrial use of the polymer

c) Give a reason for your answer in (b) above.

(1 mark)

## 22. The diagram below is a set-up for the laboratory preparation of oxygen gas

a) Name solid R

(1 mark)

b) Write an equation for the reaction that takes place in the flask

(1 mark)

c) Give one commercial use of oxygen

(1 mark)

23. When excess lead nitrate solution was added to a solution containing sodium chloride, the precipitate formed was found to weigh 5.56g. Determine the amount of sodium chloride in the solution.
(3 marks)

(Pb=207, Cl=35.5, Na=23).

- 24. a) Give a reason why concentrated sulphuric acid is not used to dry ammonia gas (1 mark)
  - b) Name one suitable drying agent for ammonia gas

(1 mark)

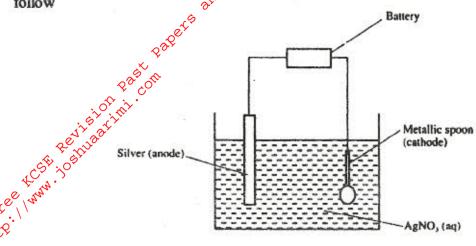

- 25. But-2-ene undergoes hydrogenation according to the equation given below CH<sub>3</sub> CH== CH CH<sub>3(g)</sub> + H<sub>2(g)</sub> → CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>CH<sub>3(g)</sub>
  - a) Name the product formed when but-2-ene reacts with hydrogen gas

(1 mark)

b) State one industrial use of hydrogenation

(1 mark)

26. The set-up below to electroplate a metallic spoon. Study it and answer the questions that follow

4	Write an ionic equation for the reaction that occurred at the cathode	(1 mark)
a,	Write an ione equation for the reaction that occurred at the eathere	( a named to

b)	State and explain what happened to the anode	55	(2 marks)

27. The following tests were carried out on three separate portions of a colourless solutions S

Tests		Observations		
i)	Addition of dilute hydrochloric acid to the first portion of solution	No observable change		
ii)	Addition of aqueous sodium carbonate to the second portion of solution S	A white precipitate was formed		
iii)	Addition of aqueous ammonia to the third portion of solution S	A white precipitate was formed which dissolved on addition of excess aqueous ammonia.		

a)	From the information in test	(i),	name a cation	which is not	present	in solution	S	(1	mark	)
----	------------------------------	------	---------------	--------------	---------	-------------	---	----	------	---

b)	Identify a cation which is likely to present in solution S	(1 mark)

c)	Write an ionic equation for the reaction which takes place in test (ii)	(1 mark)
