

Afdeling A**Vraag 1****1.1**

- 1.1.1 C ✓✓
 1.1.2 C ✓✓
 1.1.3 A ✓✓
 1.1.4 C ✓✓
 1.1.5 B ✓✓

5 x 2 = 10**1.2**

- 1.2.1 G ✓✓
 1.2.2 H ✓✓
 1.2.3 E ✓✓
 1.2.4 B ✓✓
 1.2.5 A ✓✓

5 x 2 = 10**1.3**

- 1.3.1 Vorming van grondstruktuur / grondstruktuur ✓✓
 1.3.2 Klei / Kolloïed / Humus ✓✓
 1.3.3 Grondklassifikasie ✓✓
 1.3.4 Veldwaterkapasiteit ✓✓
 1.4.5 Vrugte ✓✓

5 x 2 = 10**Totale punte vir Afdeling A = 30****Afdeling B****Vraag 2****2.1**

- 2.1.1 O Horisont ✓
 2.1.2 A Horisont ✓
 2.1.3 B Horisont ✓
 2.1.4 C Horisont ✓
 2.1.5 R Horisont ✓

(1)

(1)

(1)

(1)

(1)

(5)

2.2 Grondkleur

- 2.2.1 - Rooi kleur✓ (1)
 - 2.2.2 - Grys kleur✓ (1)
 - 2.2.3 - Ligte kleur✓ (1)
 - 2.2.4 - Donker kleur✓ (1)
- (4)**

- 2.3 - Sand ✓ (1)
- Slik✓ (1)
- Klei ✓ (1)
- Gruis✓ (1)

(enige 3 x 1 = 3)

2.4**2.4.1 Klimaat**

- Reënval en temperatuur beïnvloed die verwerking van primêre minerale in die grond.✓ (1)
- Sekondêre minerale word gevorm wat die grondstruktuur bepaal. ✓ (1)
- Klimaat beïnvloed die vegetasie en humus inhoud van die grond. ✓ (1)

2.4.2 Plantwortels

- Wortels dring in die kluite en wat lei tot die vorming van aggregate. ✓ (1)
- Krummerstruktuur vorm.✓ (1)

2.4.3 Organiese materiaal

- Humus bind sandgrond om aggregate te vorm. ✓ (1)

- 2.5 - Grond met 'n helling moet onder 'n gewas gehou word tydens die reënseisoen. ✓ (1)
 - Rig kontoerwalle op. ✓ (1)
 - Dien organiese materiaal aan die grond toe. ✓ (1)
 - Gebruik besproeiing effektief. ✓ (1)
- (4)**

DEPT. VAN ONDERWYS
2007 -03- 20
PRETORIA
DEPT. OF EDUCATION

2.6

2.6.1 Tydelike verwelking. ✓ (1)

2.6.2 - Water wat deur die plantwortels opgeneem word is minder as dit wat deur die blare verlore gaan deur transpirasie ✓ (1)

- Lae grondwatervlakke. ✓ (1)

(3)

2.7 - Makroporieë laat vrye beweging van water toe/Goeie dreinerings. ✓ (1)

- Makroporieë laat die vrye beweging van lug toe / Goeie deurlugting. ✓ (1)

(2)

2.8 - Tekstuur ✓ (1)

- Struktuur ✓ (1)

- Organiese materiaalinhoud ✓ (1)

(3)

[30]

Vraag 3**3.1 Faktore wat die grondvormingsprosesse beïnvloed**

- Klimaat ✓ (1)

- Moedermateriaal ✓ (1)

- Topografie ✓ (1)

- Vegetasie ✓ (1)

- Tyd / Periode ✓ (1)

3.2 - Kalsium ✓ (1)

- Magnesium ✓ (1)

- Kalium ✓ (1)

- Natrium ✓ (1)

(4)

**3.3 Chemiese eienskappe van organiese materiaal**

- Organiese materiaal is 'n bron van plantvoedingstowwe. ✓ (1)

- Dit verbeter die adsorpsie van katione ✓. (1)

- Minder logging weens 'n hoër Katioon Adsorpsievermoë. ✓ (1)

- Organiese sure wat vorm veroorsaak die verwerking van rotse en minerale. ✓

(1)

- Grondmikrobes verander proteïen na beskikbare vorms van stikstof vir plante. ✓ (1)
- (enige 4 x 1 = 4)
- 3.4 - Hoër meer algemene vlak van onderskeiding. ✓ (1)
- Laer meer spesifieke onderskeiding. ✓ (1)
- 3.5 - Sekere organismes gebruik CO₂ as 'n grondstof✓in die vervaardiging van koolhidrate✓ (2)
- 'n Sekere deel van die CO₂ los in die grondwater op ✓ om koolsuur te vorm. ✓ (2)
- 3.6 **Redes vir die klassifikasie van gronde in Suid-Afrika**
 - Grondklassifikasie help met die optimale benutting van 'n land se natuurlike hulpbronne. ✓ (1)
 - Dit word gebruik vir die wetenskaplike beplanning van 'n plaas. ✓ (1)
 - Dit word gebruik vir die ontwikkeling van nuwe streke. ✓ (1)
 - Dit word gebruik vir die waardebeplanning van grond. ✓ (1)
 - Dit bevorder goeie kommunikasie oor die grond. ✓ (1)
 - Dit bevorder goeie verbruik van 'n bepaalde grond. ✓ (1)
 - (5)**
- 3.7 - Grond pH / Basis ewewig✓ (1)
- Kalk inhoud✓ (1)
- Organiese materiaal✓ (1)
- (3)**
- 3.8
- 3.8.1 Neutraal ✓ (1)
- 3.8.2 Sterk suur ✓ (1)
- 3.8.3 Sterk alkalies✓ (1)
- (3)**
- [30]**

Vraag 4**4.1 Die koringblom**

- 4.1.1 - Tweeslagtig / Eenhuisig✓ (1)
 - omdat dit meeldrade, styl en stamper het✓ (1)
- 4.1.2 A - Vervaardig stuifmeelkorrels✓ (1)
 F - Beskerm die blom✓ (1)
- 4.1.3 - Aar ✓ (1)
- 4.1.4 - blombedekking /Palea/Lemma ✓ (1)
 - Beskerm die blom✓ (1)
- 4.1.5 - Styl / Stempel✓ (1)
- 4.1.6 - Blom is wind ✓ of selfbestuiwend ✓ (2)
- 4.1.7 - Om 'n groter oppervlak te bewerkstellig ✓ vir stuifmeelkorrels wat deur wind vervoer word✓ (2)

(12)**4.2**

- 4.2.1 - Ontkiemende stuifmeelkorrel ✓ (1)
- 4.2.2 A Eksien / buitenste wand✓ (1)
 B Intien / Binneste wand✓ (1)
 C Stuifmeelbuis✓ (1)
 D Manlike gamete / Manlike geslagskerne✓ (1)
 E Vegetatiewe kern / Buiskern✓ (1)
- (6)**

4.3

- 4.3.1 - Sultana druiwe✓ (1)
 - Navel lemoene✓ (1)
 - Piesang✓ (1)
 - Eiervrug / Brinjal✓ (1)

(enige 2 x 1 = 2)

- 4.3.2 Gibberelliene ✓ (1)

4.3.3 Agente vir kruisbestuiwing

- Wind✓ (1)
 - Water✓ (1)
 - Diere / Insekte / Voëls✓ (1)

**(3)**

- | | | |
|-----|---|------------|
| 4.4 | Aarbeie – lopers✓ | (1) |
| | Lelies – risome✓ | (1) |
| | Druie – steggies✓ | (1) |
| | | (3) |
| 4.5 | - Stufmeel word nat en kan nie vervoer word nie. ✓ | (1) |
| | - Stempel kan beskadig word deur wemel van chemikalieë. ✓ | (1) |
| | - Insekte wat blomme bestuif kan gedood word. ✓ | (1) |
| | | (3) |

Vraag 5

- 5.1.

5.1.1 Eenheidwaarde = $\frac{\text{Prys per ton}}{\% \text{ plantvoedingstowwe}}$ ✓ (1)

= $\frac{\text{R1865.00}}{11.3}$ ✓ (1)

= R165.00 ✓✓ (2)

(4)

5.2

 - Plaasmis ✓ (1)
 - Groenbemesting ✓ (1)
 - Kompos ✓ (1)
 - Veenmos (1)
 - Gwano (1)

(enige 3) (3)

5.3 **Manipulasie van plante vir fotosintese**

 - Opleisisteme ✓ (1)
 - Snoei / wegbreek van blare ✓ (1)
 - Plantdigtheid ✓ (1)
 - Kweekhuis verbouing ✓ (1)

(4)

5.4

 - Grondreaksie ✓ (1)
 - Mikrobiese aktiwiteit ✓ (1)
 - Yster, Aluminium and Mangaan inhoud van die grond ✓ (1)

(3)

- 5.5 - Die soort voer✓ (1)
 - Ouderdom van die mis ✓ (1)
 - Die soort en hoeveelheid strooi wat as beddegoed in hokke gebruik word✓(1)
 - Berging van die mis✓ (1)
 - Tipe dier ✓ (1)
 (enige 4) (4)
- 5.6 **Redes vir die gebruik van vloeibare kunsmis**
 - Hoogs gekonsentreerde bemesting kan gebruik word in 'n opgeloste vorm. ✓ (1)
 - Vloeibare toediening bespaar arbeid. ✓ (1)
 - Dit is goedkoop want geen addisionele apparaat word benodig nie ✓ (1)
 - Voedingstowwe bereik die plantwortels dadelik. ✓ (1)
 - Dit is ideal om te gebruik op gewasse soos suikerriet waar toegang beperk is. ✓ (1)
 - Chemikalieë om plaë en onkruid te beheer kan by die bemestingmengsels gevoeg word. ✓ (1)
 - Die akkuraatheid en egaligheid van toediening is baie hoog. ✓ (1)
 - Effektiwiteit is soortgelyk aan die van vaste kunsmisstowwe. ✓ (1)
 (enige 5) (5)
- 5.7
 5.7.1 - Ru fosfaat / Rotsfosfaat✓ (1)
 5.7.2 - Kaliumsulfaat✓ (1)
 5.7.3 - Dolomitiese kalk✓ (1)
 5.7.4 - Kalksteen Ammoniumnitraat✓ (1)
 5.7.5 - Kalksteen Ammoniumnitraat / Uruim / Ammoniumsulfaat✓ (1)
 (5)
- 5.8 - Suur gronde / Laë pH✓ (1)
 - Om die magnesium tot kalsium verhouding reg te stel✓ (1)
 (2)

 1.2.5 A ✓✓

5 x 2 = 10**1.3**

- 1.3.1 Structure formation / Soil structure ✓✓
 1.3.2 Clay / Colloid / ✓✓
 1.3.3 Soil classification ✓✓
 1.3.4 Field water capacity ✓✓
 1.4.5 Fruit ✓✓

5 x 2 = 10**Total Marks Section A = 30****Section B****Question 2****2.1**

- 2.1.1 O Horizon✓
 2.1.2 A Horizon✓
 2.1.3 B Horizon✓
 2.1.4 C Horizon✓
 2.1.5 R Horizon✓

(1)

(1)

(1)

(1)

(1)

(5)

2.2 Soil colours

- 2.2.1 - Red colour✓ (1)
 - 2.2.2 - Grey colour✓ (1)
 - 2.2.3 - Light colour✓ (1)
 - 2.2.4 - Dark colour✓ (1)
- (4)**

- 2.3
- Sand ✓ (1)
 - Silt✓ (1)
 - Clay ✓ (1)
 - Gravel✓ (1)

(any 3 x 1 = 3)

2.4**2.4.1 Climate**

- Rainfall and temperature influence erosion of primary soil minerals.✓ (1)
- Secondary minerals form and determine soil structure. ✓ (1)
- Climate influences vegetation and humus content of soil. ✓ (1)

2.4.2 Plant roots

- Roots penetrate soil clods into aggregates. ✓ (1)
- Crumb structure forms.✓ (1)

2.4.3 Organic matter

- Humus binds sandy soil into aggregates. ✓ (1)

- 2.5
- Sloping soils should be under plant cover in a rainy season. ✓ (1)
 - Construct contour walls. ✓ (1)
 - Add organic matter into the soil. ✓ (1)
 - Use irrigation system efficiently. ✓ (1)
- (4)**

2.6

2.6.1 Temporary wilting.✓ (1)

2.6.2 - Water that is absorbed by plant roots is less than that which transpires from the leaves ✓

(1)

- Low soil water levels. ✓

(1)

(3)

2.7 - Macro pores allow free movement of water / Good drainage. ✓ (1)

- Macro pores allow free movement of air / Good aeration. ✓ (1)

(2)

2.8 - Texture✓ (1)

- Structure✓ (1)

- Organic matter content✓ (1)

(3)

[30]

Question 33.1 **Factors influencing soil forming processes**

- Climate✓ (1)

- Parent material✓ (1)

- Topography✓ (1)

- Vegetation✓ (1)

- Time / Period✓ (1)

3.2 - Calcium✓ (1)

- Magnesium ✓ (1)

- Potassium✓ (1)

- Sodium✓ (1)

(4)

3.3 **Chemical properties of organic matter**

- Organic matter is a source of plant nutrients. ✓ (1)

- It improves the adsorption of cations✓. (1)

- Less leaching occurs due to high Cation Adsorption Capacity.✓ (1)

- Organic acids that are formed causes weathering of rocks and minerals.✓ (1)

- Soil microbes convert proteins into accessible nitrogen. ✓ (1)

(any 4 x 1 = 4)

- 3.4 - Higher, more general level of differentiation. ✓ (1)

- Lower, more detailed differentiation. ✓ (1)

- 3.5 - Some organisms use CO₂ as a source ✓ in the formation of carbohydrates ✓ (2)

- Some CO₂ dissolves in soil water ✓ to form carbonic acid. ✓ (2)

3.6 **Reasons for classifying soil in South Africa**

- Soil classification helps with optimal utilisation of the country's natural resources. ✓ (1)

- It is used for the scientific planning of the farm. ✓ (1)

- It is used for the development of a new region. ✓ (1)

- It is used for the valuation of soil. ✓ (1)

- It enables good communication about the soil. ✓ (1)

- It enables good utilisation of a specific soil. ✓ (1)

(5)

- 3.7 - Soil pH / Base status ✓ (1)

- Lime content ✓ (1)

- Organic matter ✓ (1)

(3)

3.8

- 3.8.1 Neutral ✓ (1)

- 3.8.2 Strongly acid ✓ (1)

- 3.8.3 Strongly alkaline ✓ (1)

(3)

[30]

Question 4**4.1 Wheat flower**

- 4.1.1 - Bisexual / Monoecious✓ (1)
 - because it has anther, style and stigma✓ (1)
- 4.1.2 A - Produces pollen grains✓ (1)
 F - Protects the flower✓ (1)
- 4.1.3 - Spike✓ (1)
- 4.1.4 - Floral covers/Palea/Lemma ✓ (1)
 - Protect the flower✓ (1)
- 4.1.5 - Style / Stigma✓ (1)
- 4.1.6 - Flower is wind ✓ or self-pollinated ✓ (2)
- 4.1.7 - To provide a larger surface area ✓ for pollen grains carried by wind✓ (2)
- (12)**

4.2

- 4.2.1 - Germinating pollen grain✓ (1)
- 4.2.2 A Exine / Outer wall✓ (1)
 B Intine / Inner wall✓ (1)
 C Pollen tube✓ (1)
 D Male gametes / Male sex nuclei✓ (1)
 E Vegetative nucleus / Tube nucleus✓ (1)
- (6)**

4.3

- 4.3.1 - Sultana grapes✓ (1)
 - Navel oranges✓ (1)
 - Banana✓ (1)
 - Egg fruit / Brinjal✓ (1)
- 4.3.2 Gibberellins ✓ (1)
- 4.3.3 **Agents of cross-pollination**
- Wind ✓ (1)
 - Water✓ (1)
 - Animals / Insects / Birds✓ (1)
- (3)**

- 4.4 Strawberries – runners✓ (1)
 Lilies – rhizome✓ (1)
 Grape – cutting/slips✓ (1)
 (3)
- 4.5 - Pollen becomes moist and cannot be transported. ✓ (1)
 - Stigma may be damaged by stream of chemicals. ✓ (1)
 - Insects, which pollinate flowers, may be killed. ✓ (1)
 (3)

Question 5

5.1.

- 5.1.1 Unit value = $\frac{\text{Price per ton}}{\% \text{ plant nutrient}}$ ✓ (1)
 $= \frac{R1865.00}{11.3}$ ✓ (1)
 $= R165.00 \rightarrow$ ✓✓ (2)
 (4)

- 5.2 - Farm manure✓ (1)
 - Green manure✓ (1)
 - Compost✓ (1)
 - Peat moss (1)
 - Guano (1)
 (any 3) (3)

5.3 Manipulation of plants for photosynthesis

- Trellising✓ (1)
 - Pruning / Cutting leaves✓ (1)
 - Plant density ✓ (1)
 - Green housing✓ (1)
 (4)

- 5.4 - Soil reaction ✓ (1)
 - Microbial activity✓ (1)
 - Iron, Aluminium and Manganese content of soil✓ (1)
 (3)

- 5.5 - Type of the feed✓ (1)
 - Age of the manure✓ (1)
 - Nature and quantity of bedding used✓ (1)
 - Storing of manure✓ (1)
 - Type of animal ✓ (1)
 (any 4) (4)

5.6 **Reasons for using liquid fertilisers**

- Highly concentrated fertilisers can be used in diluted form. ✓ (1)
 - Liquid application saves labour. ✓ (1)
 - It is cheap as no extra apparatus is required. ✓ (1)
 - Nutrients reach the plant roots immediately. ✓ (1)
 - It is ideal to use in crops with poor access like in sugar cane. ✓ (1)
 - Chemicals to control pests and weeds can be added to mixture. ✓ (1)
 - The accuracy and evenness of application are very high. ✓ (1)
 - Effectiveness is the same as that of solid fertilisers. ✓ (1)
 (any 5) (5)

5.7

- 5.7.1 - Raw phosphate✓ (1)
 5.7.2 - Potassium sulphate✓ (1)
 5.7.3 - Dolomitic lime✓ (1)
 5.7.4 - Limestone Ammonium Nitrate✓ (1)
 5.7.5 - Limestone Ammonium Nitrate / Urea / Ammonium sulphate✓ (1)
 (5)

- 5.8 - Acid soils / Low pH✓ (1)
 - To correct magnesium and calcium ratio✓ (1)
 (2)

[30]
