

Possible Answers Supp 2007

SECTION A

QUESTION 1

- 1.1 Multiple choice
- 1.1.1 A✓ ✓ (2)
- 1.1.2 D✓ ✓ (2)
- 1.1.3 B✓ ✓ (2)
- 1.1.4 C✓ ✓ (2)
- 1.1.5 D✓ ✓ (2)

[10]

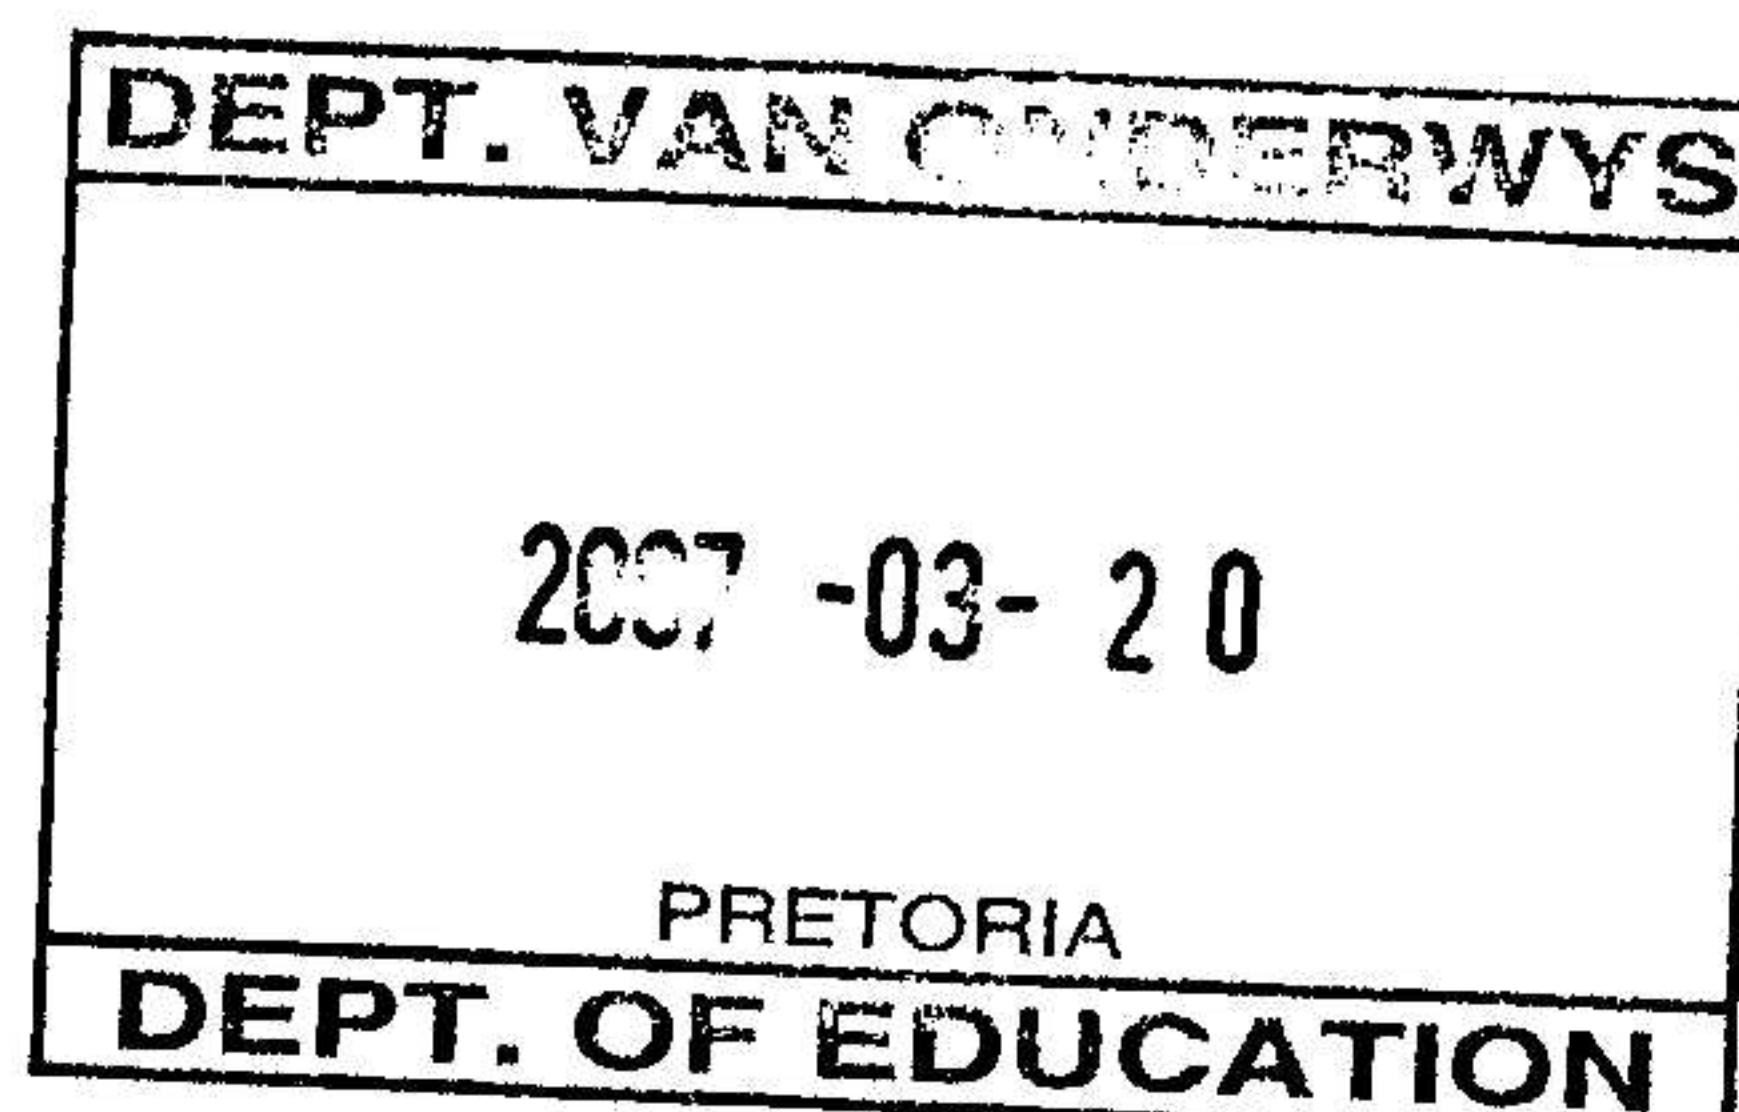

1.2 Correct terms

- 1.2.1 Co-operatives✓ ✓ (2)
- 1.2.2 Carbohydrates✓ ✓ (2)
- 1.2.3 Crop rotation✓ ✓ (2)
- 1.2.4 Production✓ ✓ (2)
- 1.2.5 Tensiometer✓ ✓ (2)

[10]

1.3 Matching the columns

- 1.3.1 B✓ ✓ (2)
- 1.3.2 H✓ ✓ (2)
- 1.3.3 C✓ ✓ (2)
- 1.3.4 F✓ ✓ (2)

1.3.5 D✓ ✓ (2)

[10]

TOTAL SECTION A: {30}

SECTION B

QUESTION 2 : ANIMAL NUTRITION

2.1 Digestive tract of the pig

- 2.1.1 B oesophagus/gullet✓ (1)
- C stomach✓ (1)
- D liver✓ (1)
- E pancreas✓ (1)
- F duodenum✓ (1)

- 2.1.2 amylase✓ (1)
- lipase✓ (1)
- trypsin/trypsinogen✓ (1)

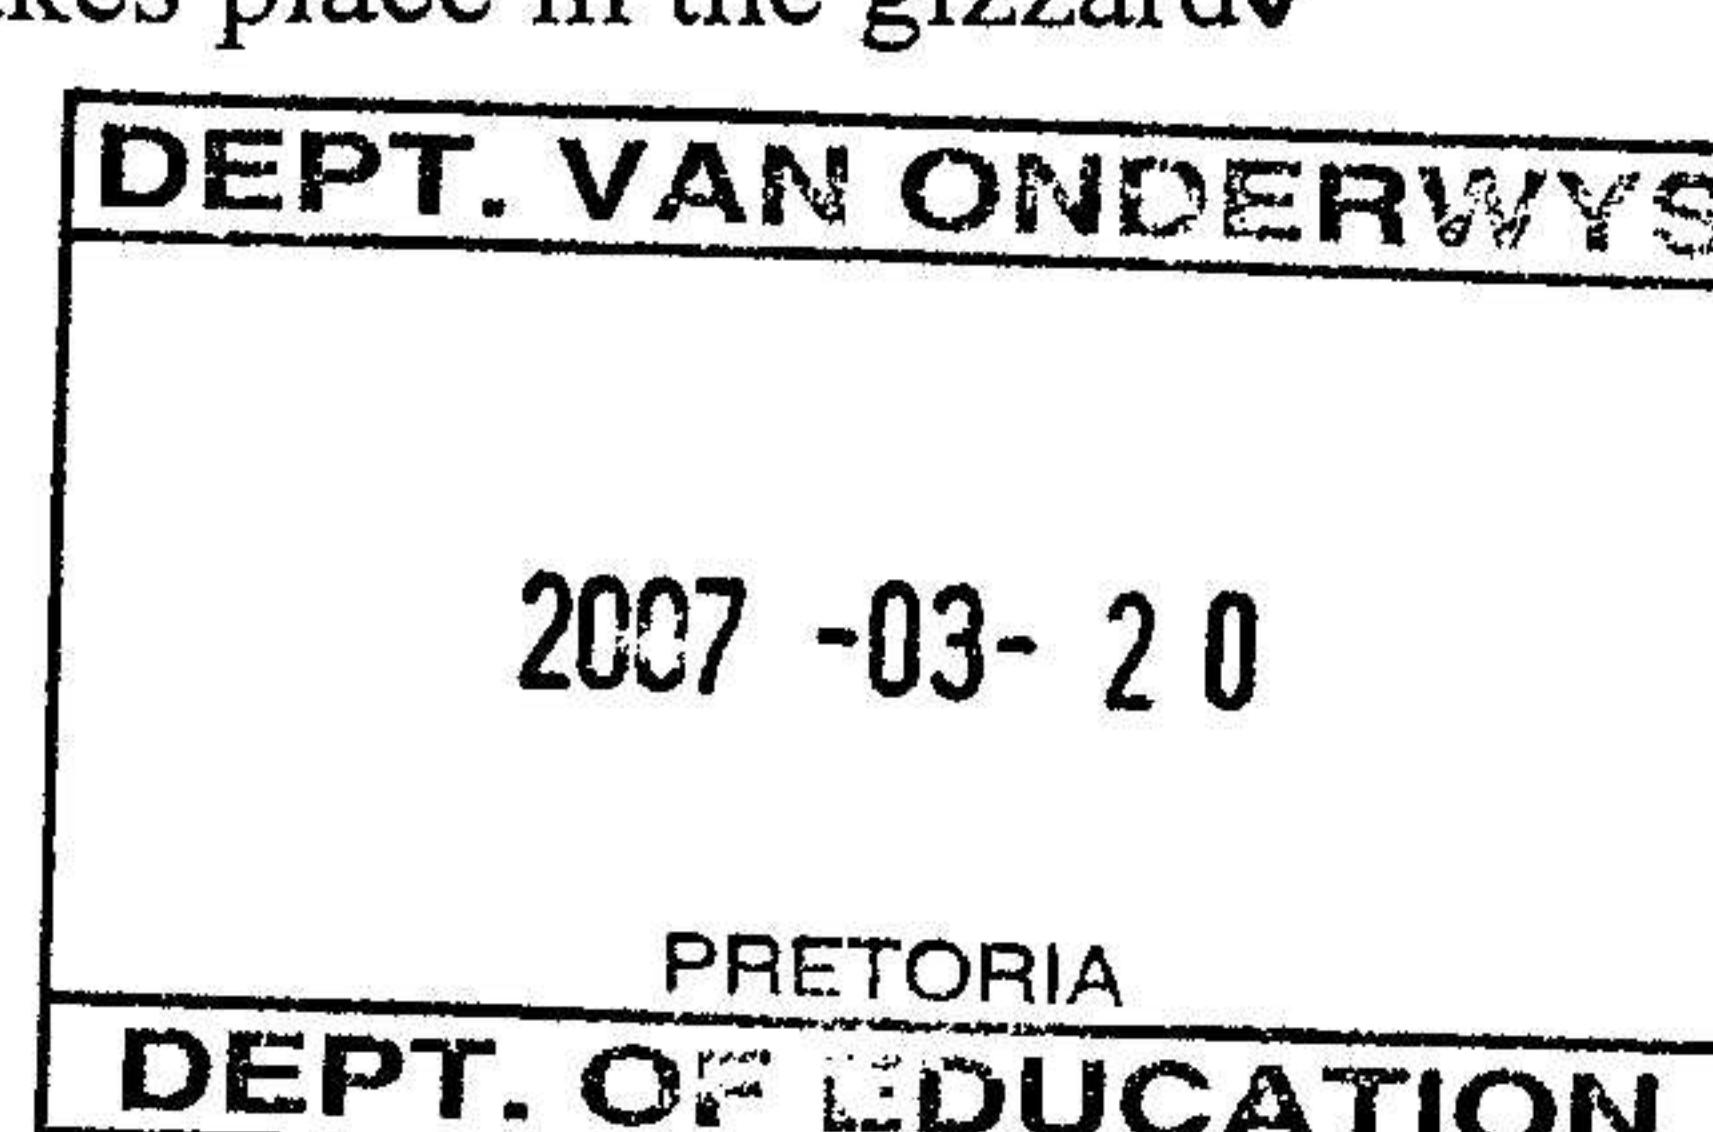

- 2.1.3 G✓ (1)
- H✓ (1)

2.2 Types of digestion

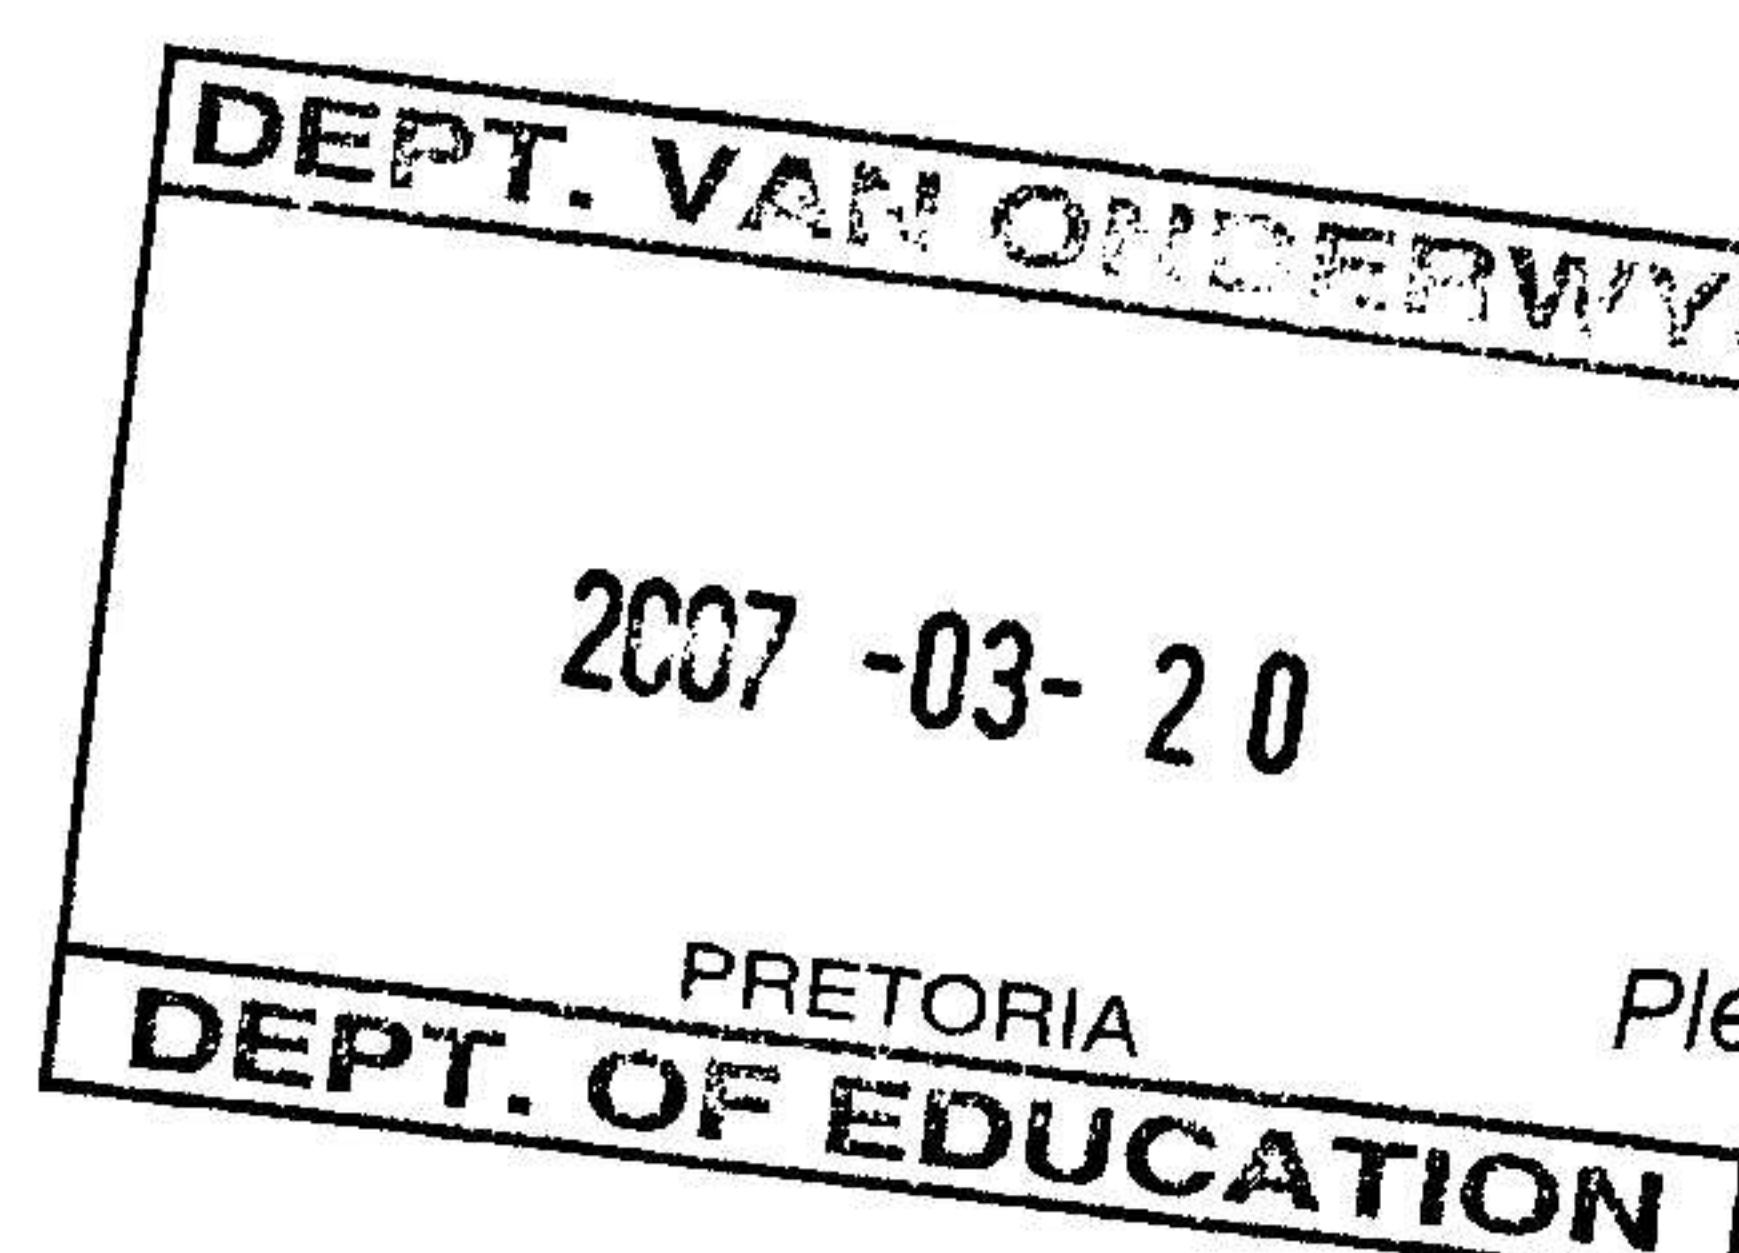

- 2.2.1 digestion of food by microbes or micro-organisms in ruminants✓
bacteria and protozoa are the most common✓ (2)

- 2.2.2 digestion of food by chemical substances produced in the animal body✓
for example the different enzymes produced by the glands✓ (2)

- 2.2.3 digestion of food by chewing or mastication✓
occurring mostly in the mouth of the animal✓
in the chicken grinding takes place in the gizzard✓ (Any 2) (2)

- 2.3 water acts as a solvent and transport medium✓
medium for chemical reaction✓
controls body temperature✓
serves as a lubricant✓
gives shape to the body✓
protects the nervous system from shocks✓
medium for excreting waste products✓
conducts sound in the ear✓
conducts light in the eye✓ (Any 4) (4)
- 2.4 Absorption of digested food
- 2.4.1 process by which a gas or a substance in solution✓
spreads from areas of high concentration to low concentration✓ (2)
- 2.4.2 the passage of solvent molecules across a semi-permeable membrane✓
into an area in which there is a high concentration of a solute✓
to which the membrane is impermeable✓ (Any 2) (2)
- 2.4.3 process where molecules move against concentration gradient✓
energy is required for this to take place✓ (2)
- 2.5 Digestible dry material $= \frac{[7\text{kg} - (7\text{kg} \times 30\%)]}{100} - \frac{[3\text{kg} - (3\text{kg} \times 20\%)]}{100}$
 $= (7\text{kg} - 2.10\text{kg}) - (3\text{kg} - 0.6\text{kg})$
 $= 4.9\text{kg} - 2.4\text{kg}$
 $= 2.5\text{kg}$ or 3kg✓ ✓ (5)
- 2.6 formation of bones and teeth✓
blood clotting✓
maintain acid-base equilibrium✓
key role in nerve and muscle function✓
for milk and egg production✓ (Any 4) (4)

QUESTION 3 : ANIMAL REPRODUCTION

3.1 Reproductive organs of the cow

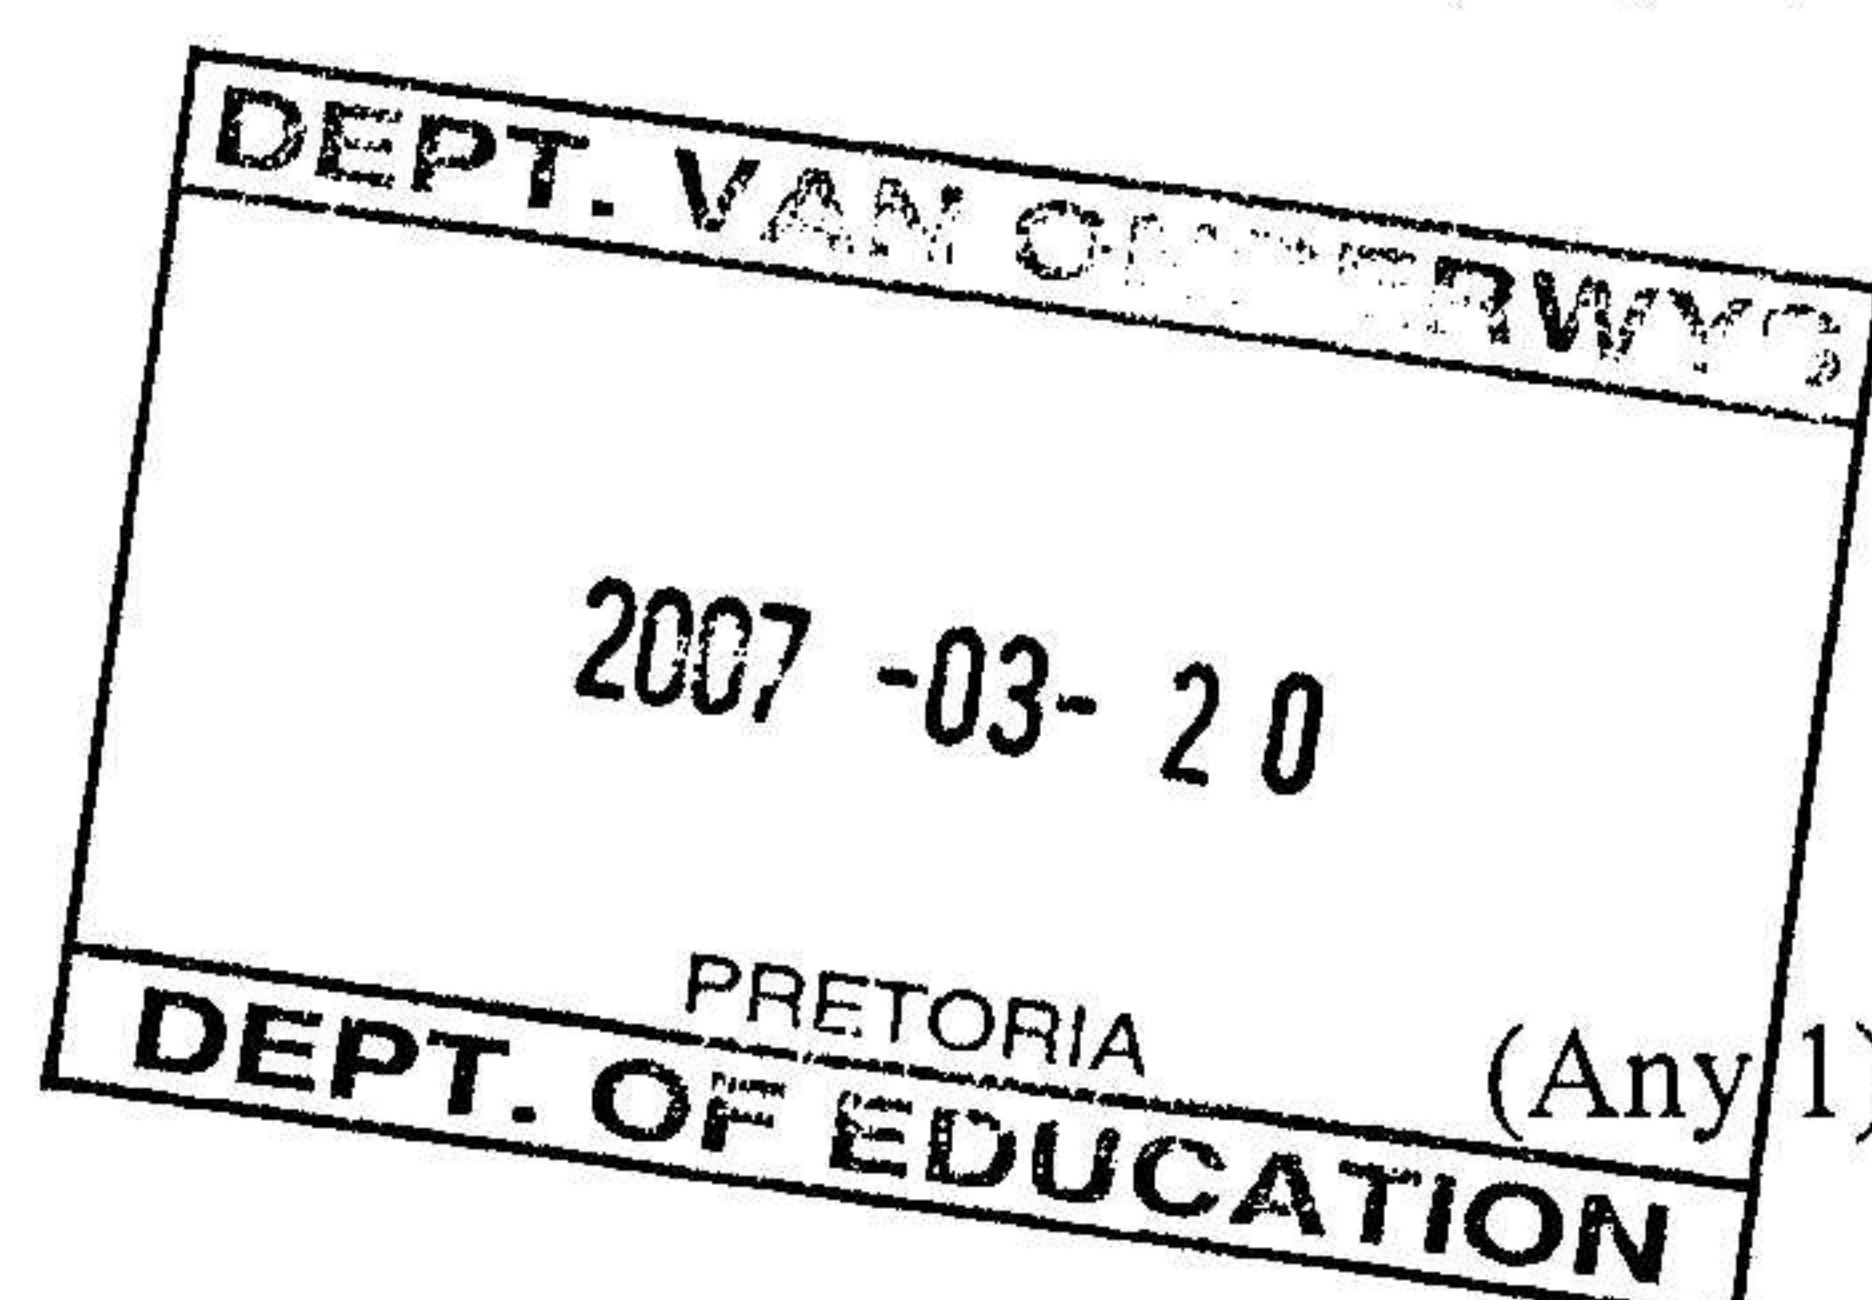

- 3.1.1 (a) G✓ (1)
 (b) B✓ (1)
 (c) B✓ (1)
 (d) I✓ (1)
 (e) H✓ (1)
 (f) G✓ (1)

3.1.2 (a) management is an important aspect of breeding and if not performed correctly leads to infertility✓
 incorrect timing with regard to mating of young heifers and after calving✓
 poor hygienic conditions, especially during parturition✓
 poorly adapted animals may show low fertility✓
 correct cow to bull ratio✓ (Any 2) (2)

(b) delayed ovulation – ovulating at the wrong time✓
 anovulation/no ovulation – no release of the ova✓ (2)
 (c) overfeeding – cows that are too fat will not ovulate✓
 underfeeding – delayed puberty and poor condition reduces fertility✓
 unbalanced feeding – shortage of vitamins and minerals✓
 oestrogen containing plants can interfere with oestrus cycles e.g. clover✓ (Any 2) (2)

3.2 Functions of hormones

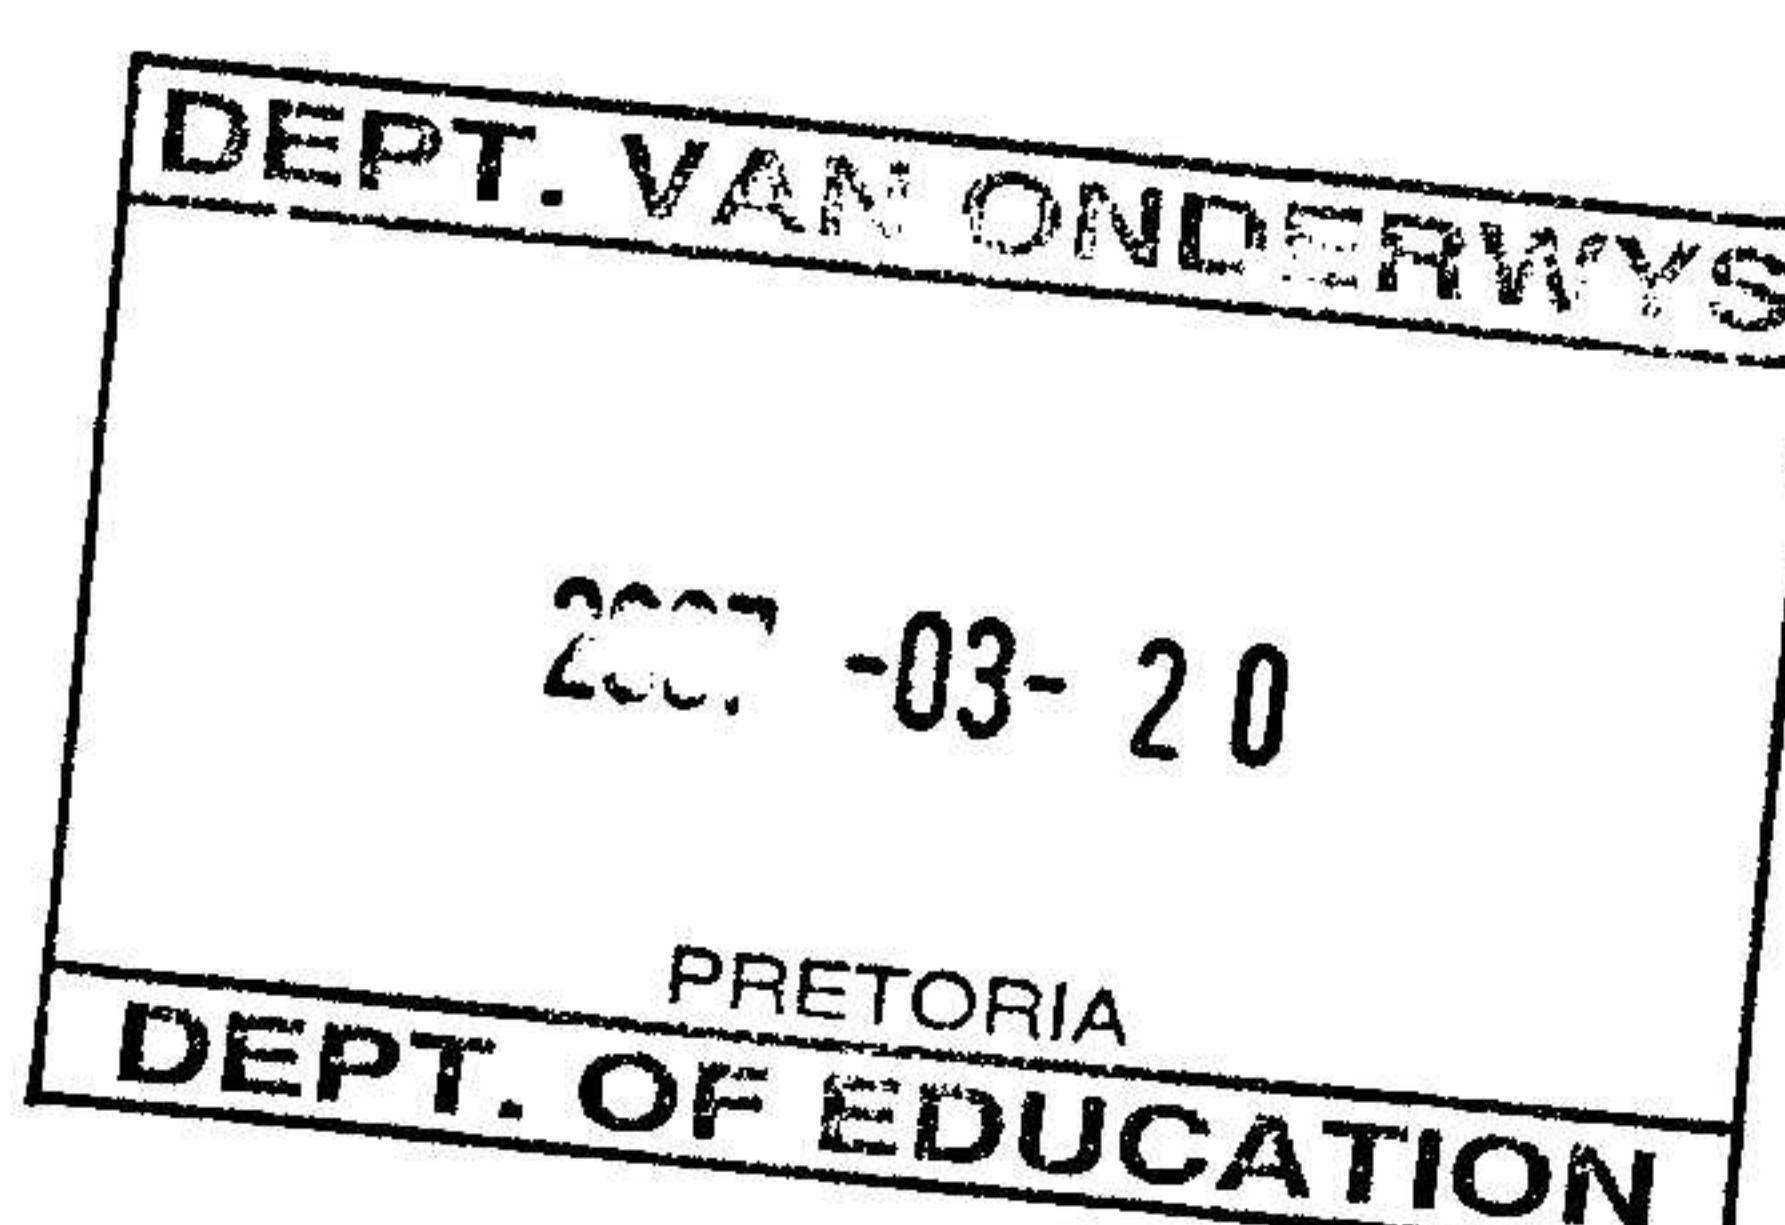

- 3.2.1 sperm production✓
 sexual desire and activity✓
 male masculine characteristics✓

3.2.2 causes the relaxation of the muscles and skeleton of the pelvic cavity to assist with the birth process✓ (1)

3.2.3 growth and ripening of the Graafian follicles✓ (1)

- 3.3.4 maintains pregnancy by stimulating the corpus luteum✓
enhances the secretion of progesterone✓
stimulates the growth of the udder✓ (Any 1) (1)
- 3.3 Artificial insemination (A.I.)
- 3.3.1 dairy is intensive farming which suites the practice of artificial insemination
heat spotting is very easy during milking✓
insemination of cows can be done after milking✓
dairy cows are more docile and easier to inseminate✓
good sources of healthy, uninfected and viable semen is available✓
dairy staff are well trained in the artificial insemination procedures✓
most economical breeding method for dairy farmers as no bulls need to be bought and cared for✓
good record-keeping systems are in place for progeny records✓ (Any 5) (5)
- 3.3.2 bring the cow into a sheltered area, make it calm and comfortable✓
apparatus used must be absolutely clean✓
correct thawing and preparation of semen✓
remove faeces from rectum✓
handle pistolette with one hand✓
the other hand, in the rectum, hold the cervix✓
stretch the vagina to iron out folds✓
tip of pistolette guided through the cervix✓
half of the semen is deposited in the cervix✓
other half is deposited in the uterine horn✓
withdraw the pistolette✓
touch sex organs to stimulate secretion of oxytocin✓ (Any 6) (6)

3.4 Crossbreeding

- 3.4.1 mating of two pure bred animals of different breeds✓
increased vigour of the offspring when unrelated individuals are mated✓
perform better than the average of their parents✓

(3)

- 3.4.2 development of new breeds✓
greater production e.g. wool, milk, eggs, beef✓
faster growth rates✓
greater resistance to diseases✓
greater fertility✓
better adapted✓
utilise food better✓
possess better motherly instincts✓

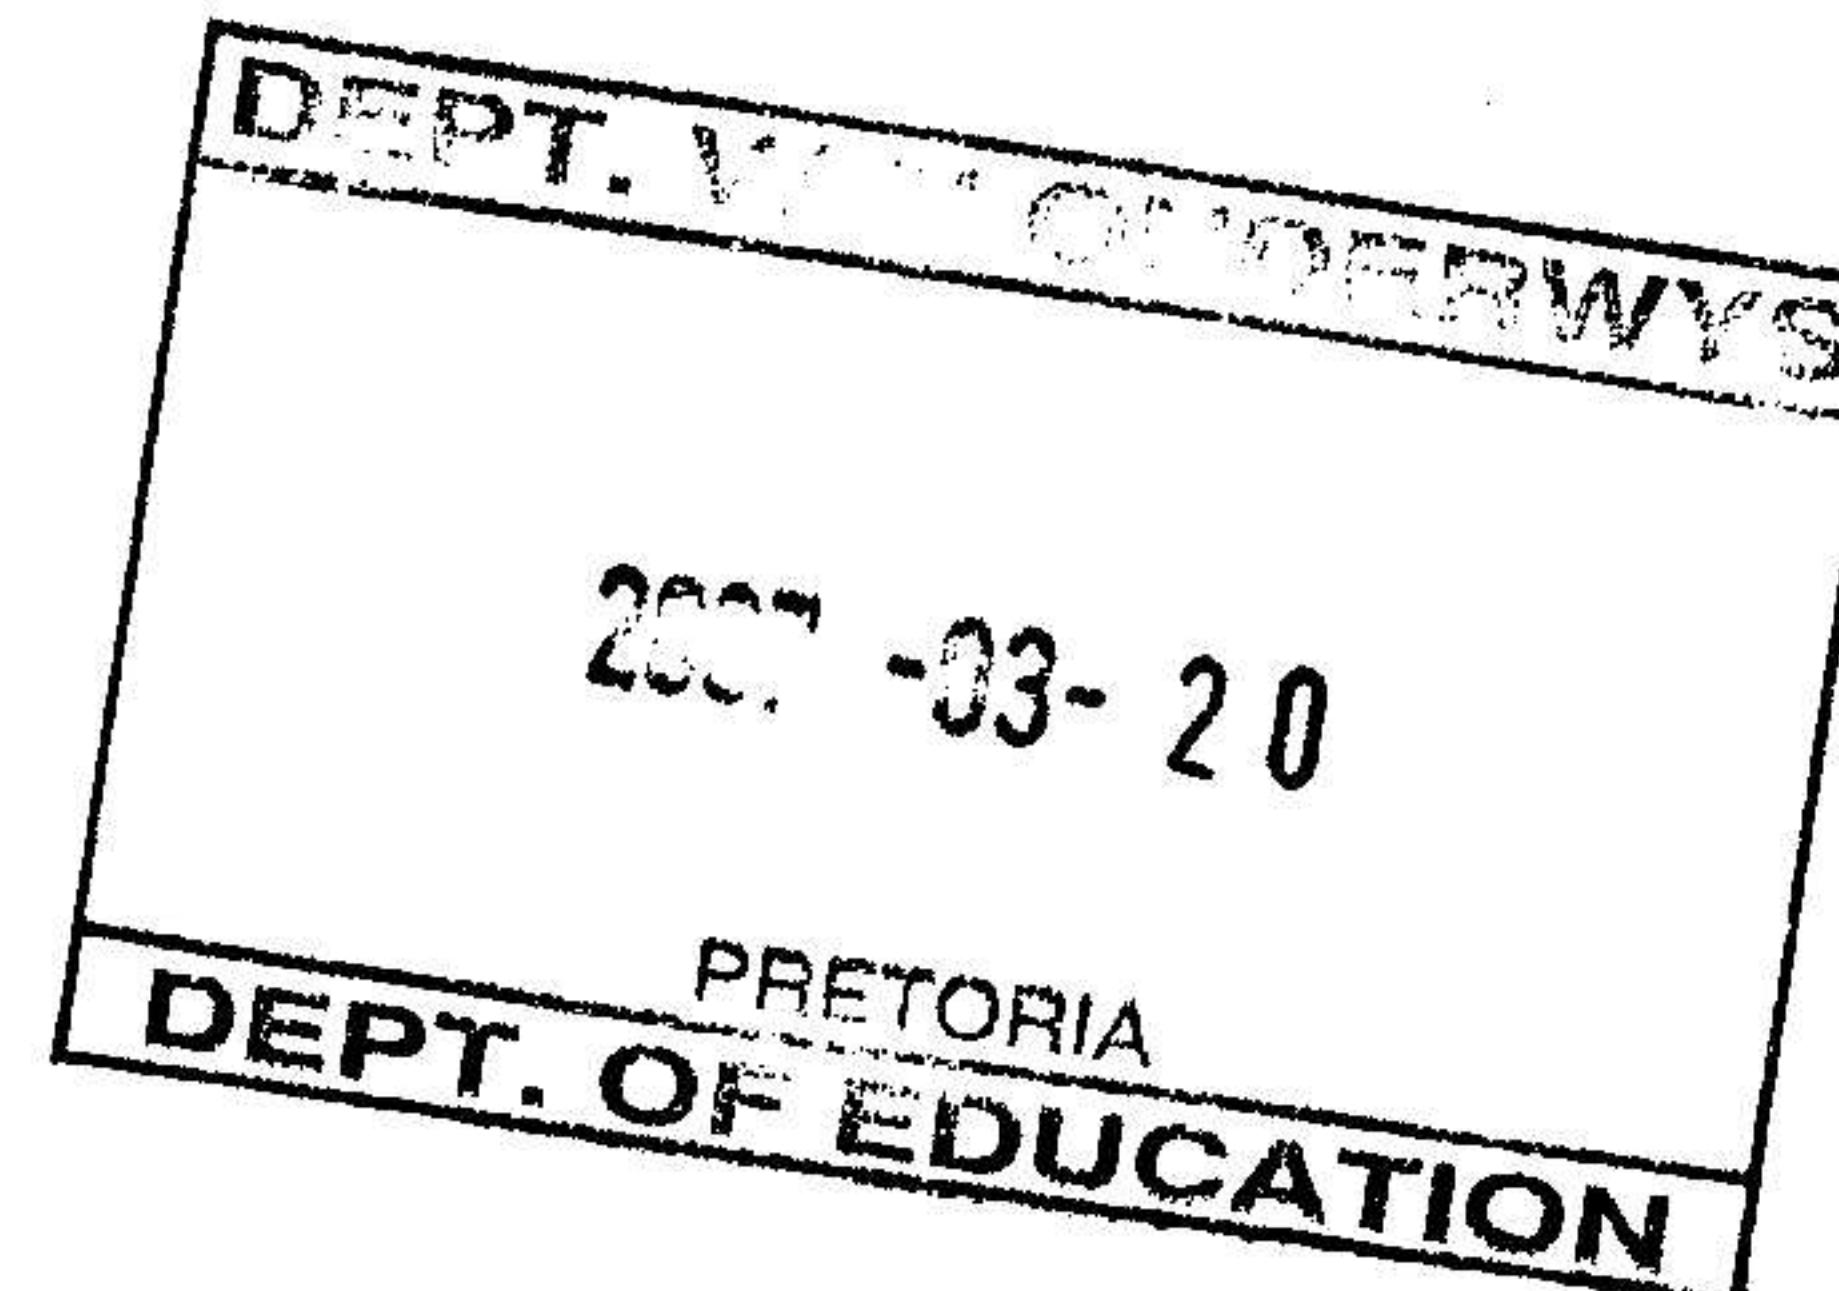

(Any 5) (5)

[35]

QUESTION 4 : OPTIMAL RESOURCE UTILISATION

- 4.1 high producer prices may be an advantage of one crop✓
soil may be suitable for a limited number of crops✓
climate may limit farmers to a small number of crops✓
- 4.2 infiltration tempo of the soil (soil type)✓
topography✓
quantity of water available✓
salt content of the soil✓
quality of water✓
costs✓
type of crop✓
method of cultivation✓

(Any 5) (5)

- 4.3 soil store and release water for use by plants✓
provides air for respiration of plant roots and micro-organisms✓
release nutrients to plants✓
serves as growth medium for plants✓
allows infiltration of water✓ (5)

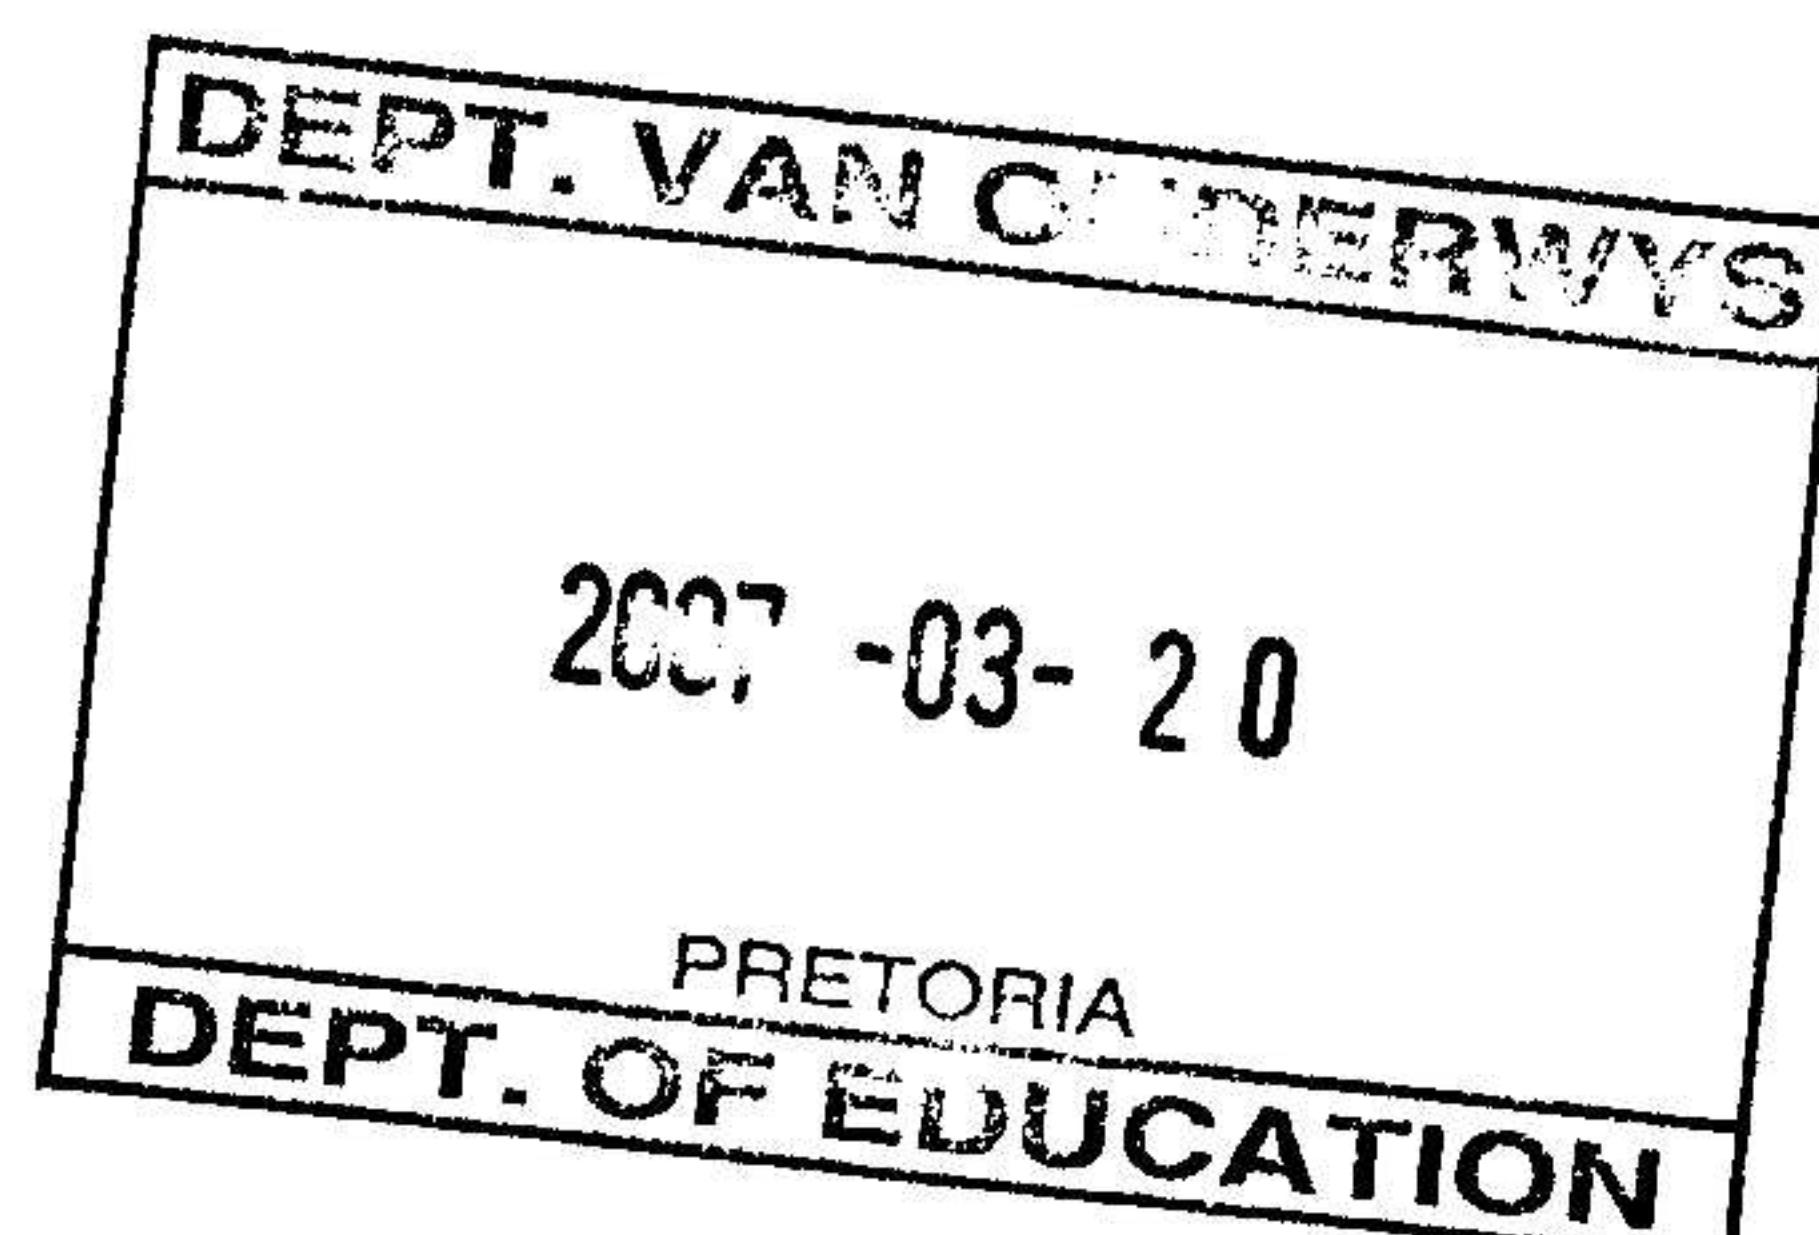

4.4 better the aeration of soil✓
development of a better root system✓
increased soil temperature✓
stimulate microbe activity✓
soil cultivates more easily✓
increased infiltration rate of the soil✓
removal of harmful substances✓ (Any 6) (6)

4.5 total dissolved salts (salt content)✓
turbidity✓
biological matter✓
sodium adsorption ratio✓
toxic ions e.g. boron✓ (Any 3) (3)

4.6 give plants a chance to form seeds✓
to store nutrients for regrowth✓
establishment of young seedlings✓
recovery of the veld for the next season✓
veld improvement✓ (Any 3) (3)

Please turn over

QUESTION 5 : AGRICULTURAL ECONOMICS

5.1 Case study

- 5.1.1 (a) eggs✓ (2)
 braai packs✓
 (b) deep freezer✓ (2)
 trolley✓
 (c) shop building✓ (2)
 electric facilities✓
- 5.1.2 perishability/storage facility✓ ✓ (2)
- 5.1.3 total loss due to spoilage✓
 low prices✓ (2)

5.2 Short-term credit✓

- e.g. money used to buy goods required in production processes viz. seeds, fertilizers, weedicides, pesticides etc. ✓ (Any one example) (2)
- Medium-term credit✓

- e.g. money for buying livestock, machinery, implements, etc.✓ (Any one example) (2)

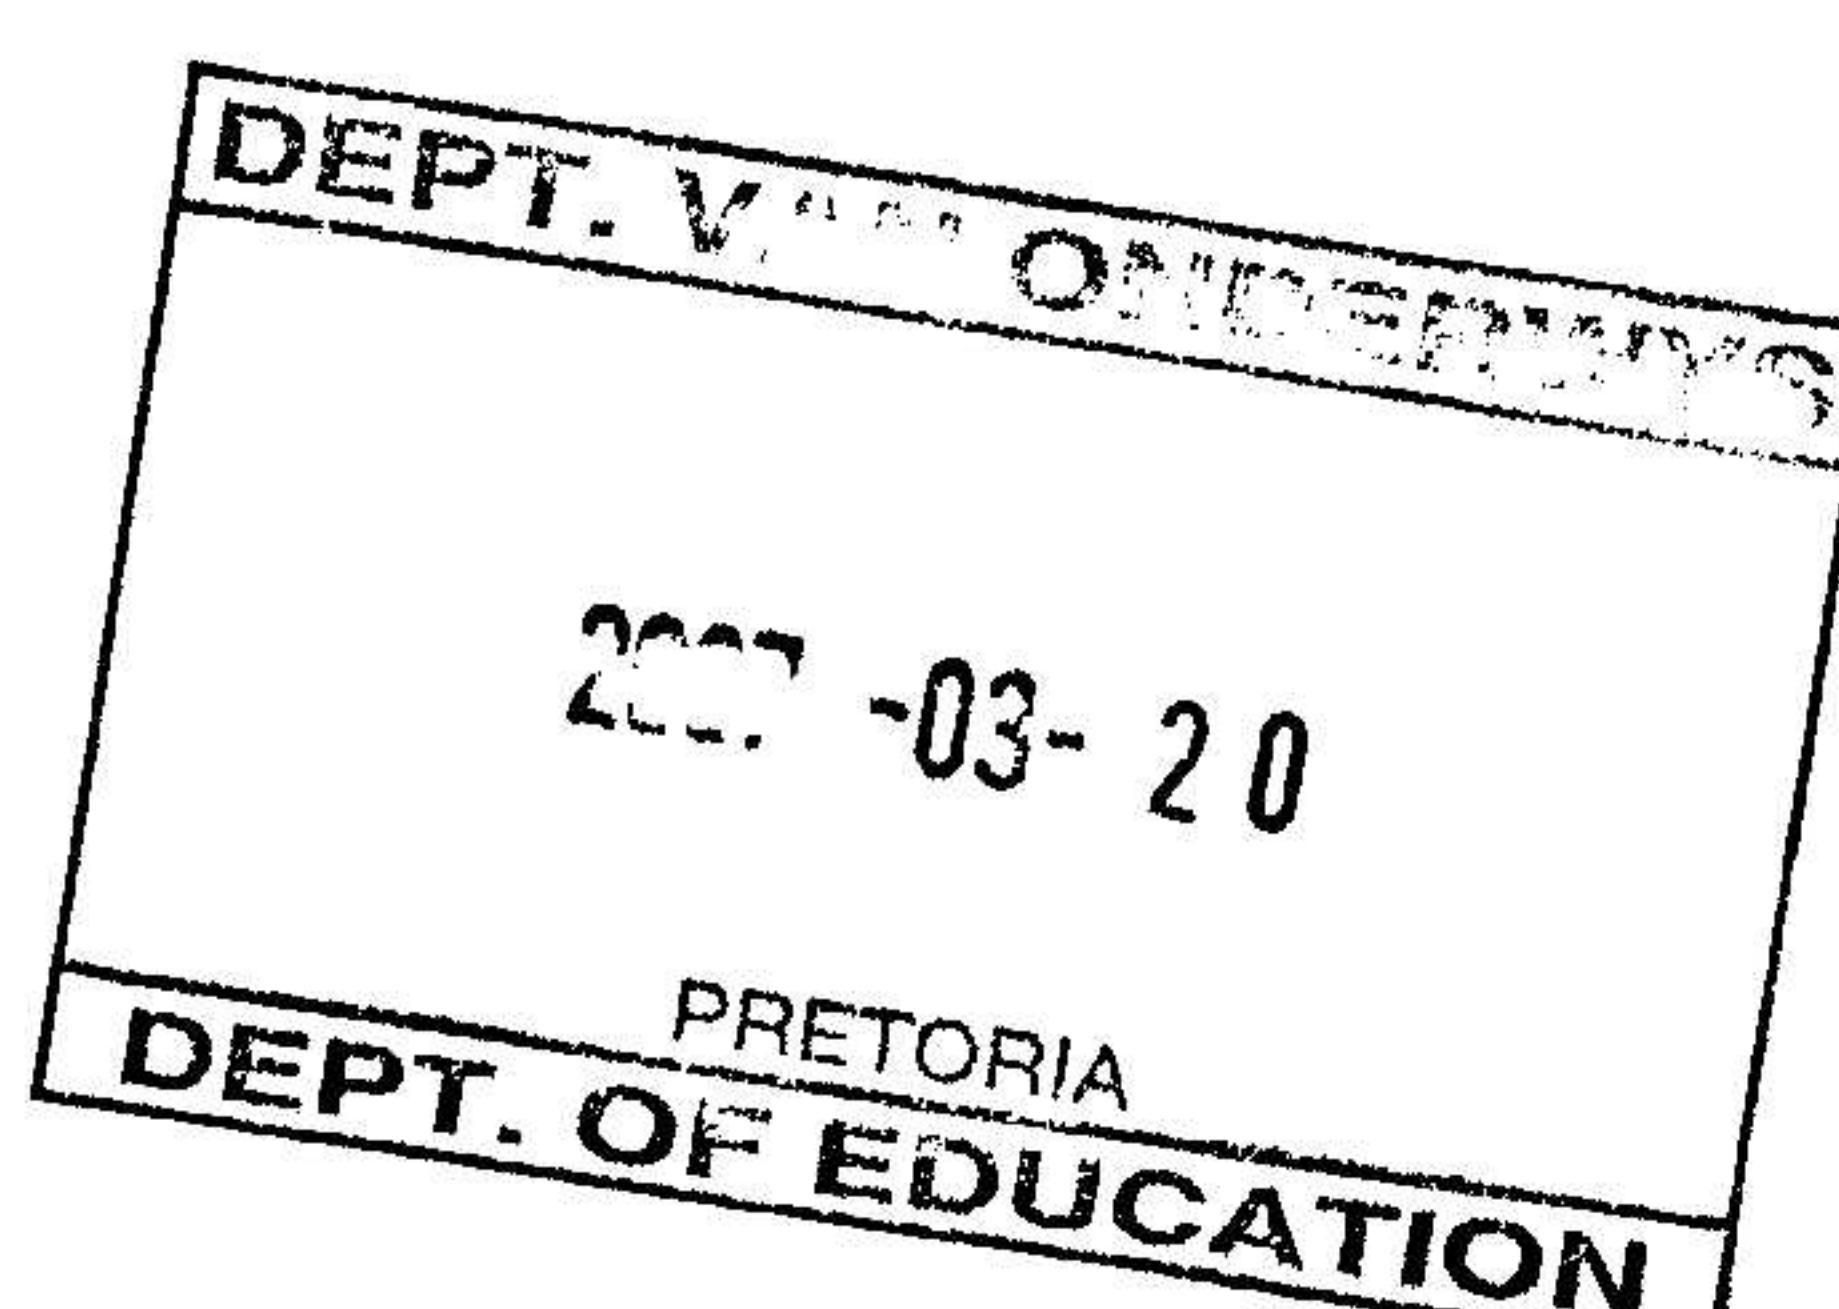

Long-term credit✓

- e.g. money for buying land/farm, erecting buildings or building a dam etc.✓ (Any one example) (2)

5.3 Graph

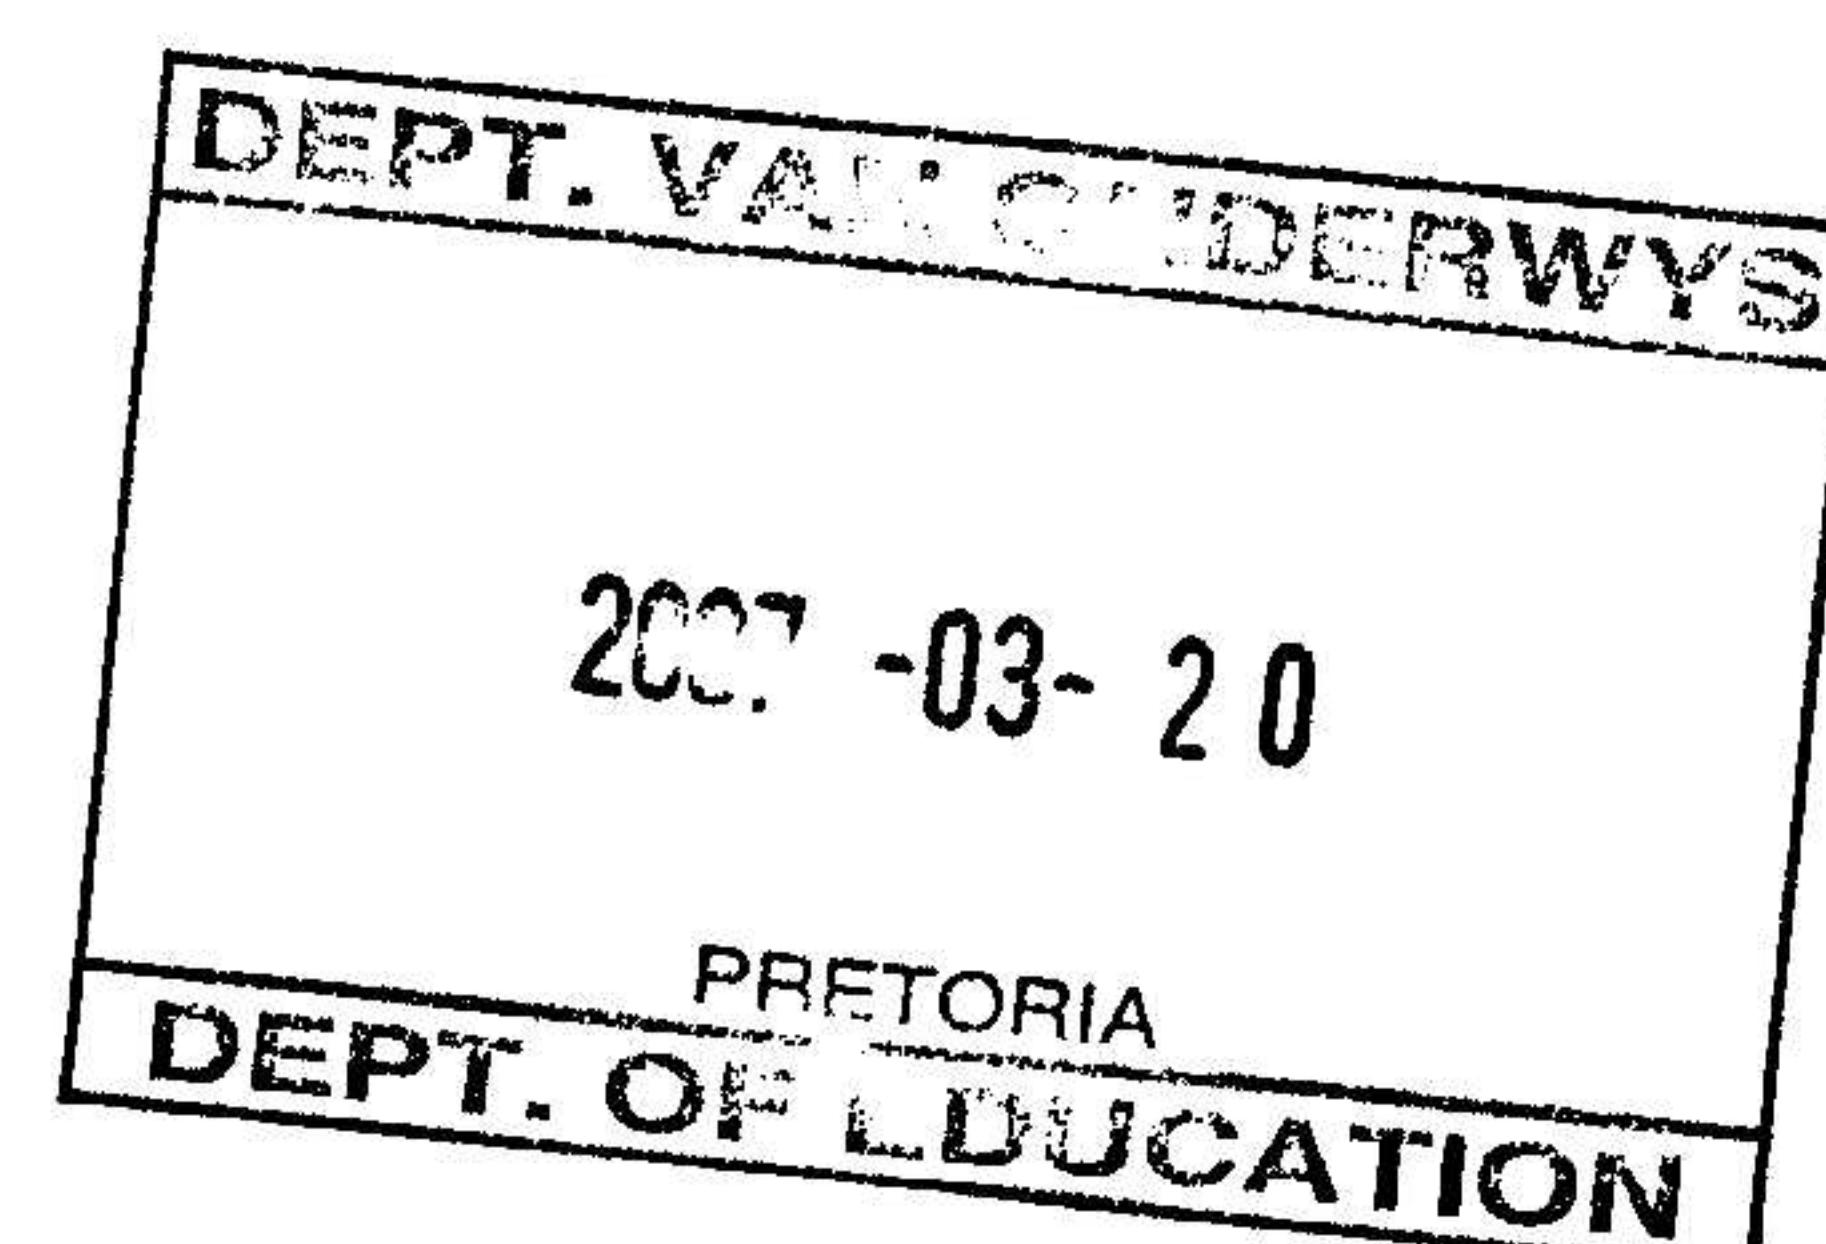

- 5.3.1 (a) W – supply curve✓ (1)
 (b) T – demand curve✓ (1)
 (c) X – surplus in the market✓ (1)
 (d) Y – shortage in the market✓ (1)

- 5.3.2 demand being equal✓
 to the supply✓

- 5.4 direct sales to the consumer✓
direct sales to the food processing factories✓
direct sales to wholesalers✓
direct sales to retailers✓
sales through middlemen to consumers✓ (Any 3) (3)

[25]

AFDELING A

VRAAG 1

1.1 Meerkeusige vrae

1.1.1 A✓ ✓ (2)

1.1.2 D✓ ✓ (2)

1.1.3 B✓ ✓ (2)

1.1.4 C✓ ✓ (2)

1.1.5 D✓ ✓ (2)

[10]

1.2 Korrekte term

1.2.1 Koöperasies✓ ✓ (2)

1.2.2 Koolhidrate✓ ✓ (2)

1.2.3 Gewas rotasie✓ ✓ (2)

1.2.4 Produksie✓ ✓ (2)

1.2.5 Tensiometer✓ ✓ (2)

[10]

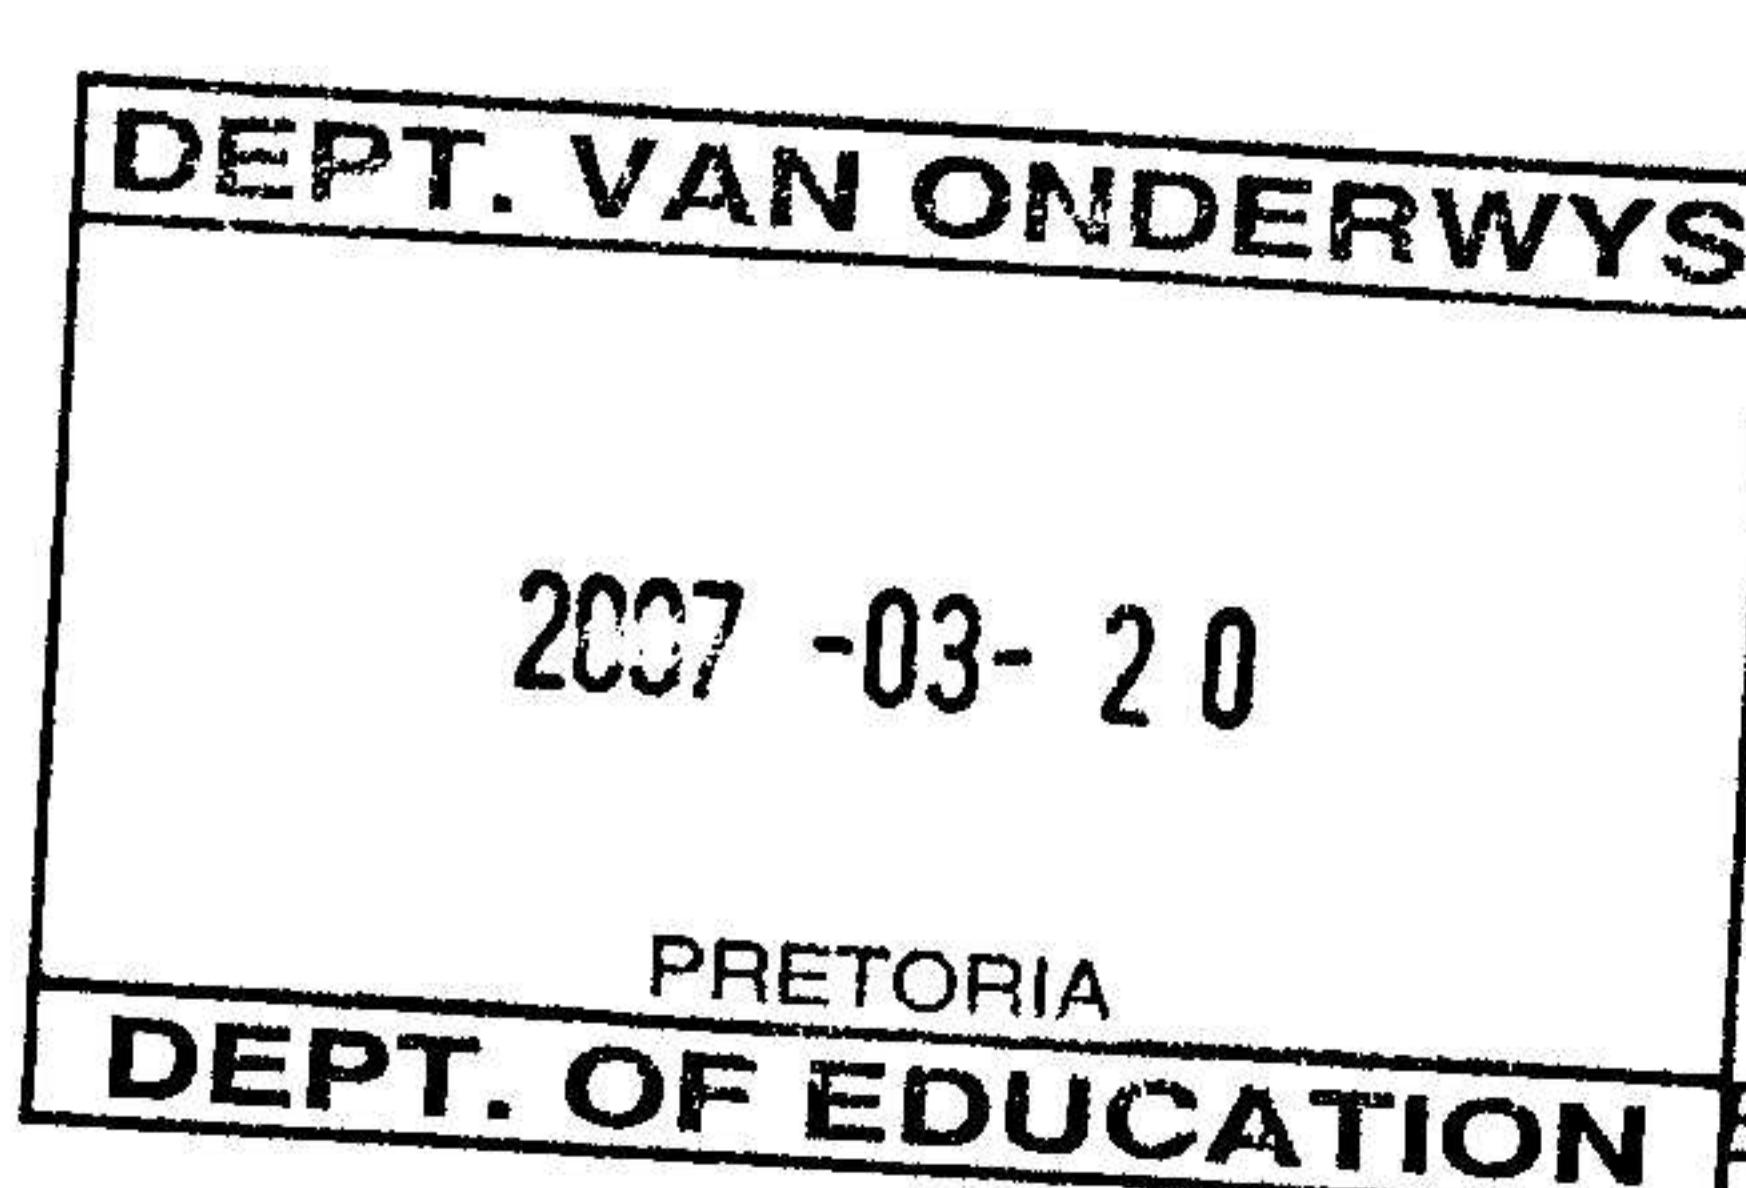

1.3 Pas die kolomme

1.3.1 B✓ ✓ (2)

1.3.2 H✓ ✓ (2)

1.3.3 C✓ ✓ (2)

1.3.4 F✓ ✓ (2)

1.3.5 D✓ ✓ (2)

[10]

TOTAAL AFDELING A: {30}

AFDELING B

VRAAG 2 : DIEREVOEDING

2.1 Spysverteringskanaal van die vark

- 2.1.1 B slukderm / oesophagus✓ (1)
C maag✓ (1)
D lewer✓ (1)
E pankreas✓ (1)
F dunderm / duodenum✓ (1)

- 2.1.2 amilase✓ (1)
lipase✓ (1)
tripsien/tripsinogeen✓ (1)

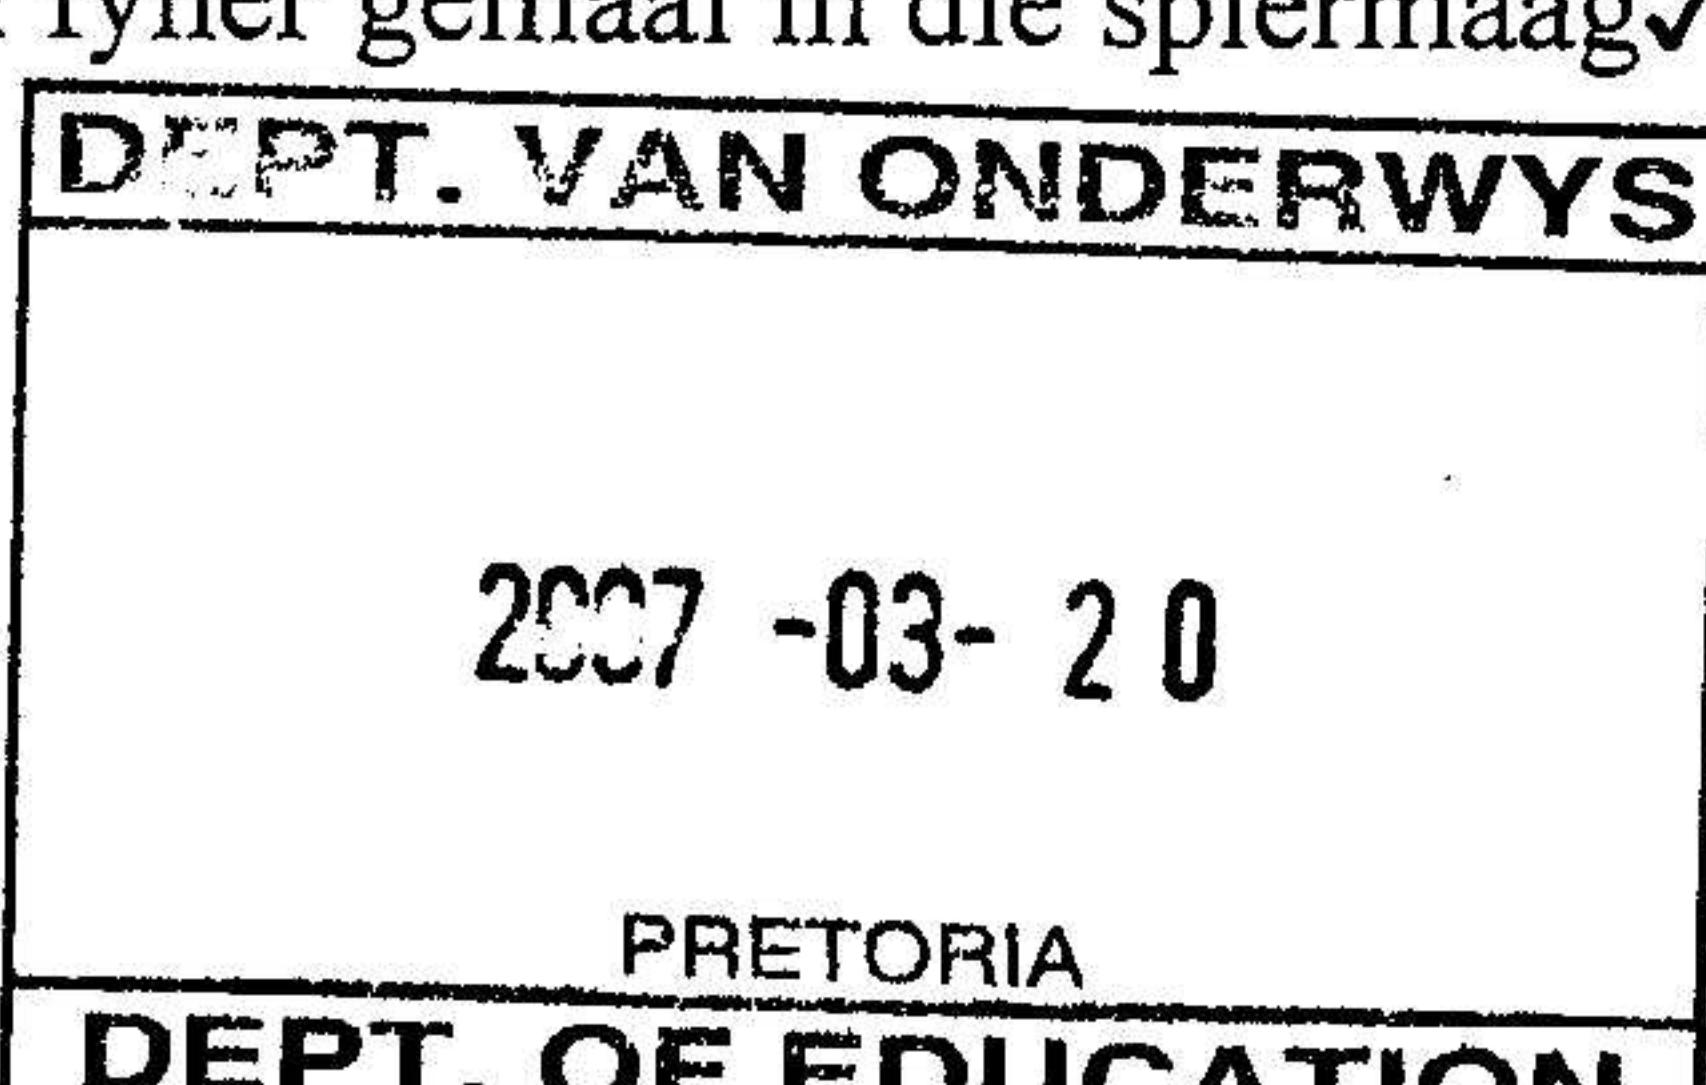

- 2.1.3 G✓ (1)
H✓ (1)

2.2 Tipe vertering

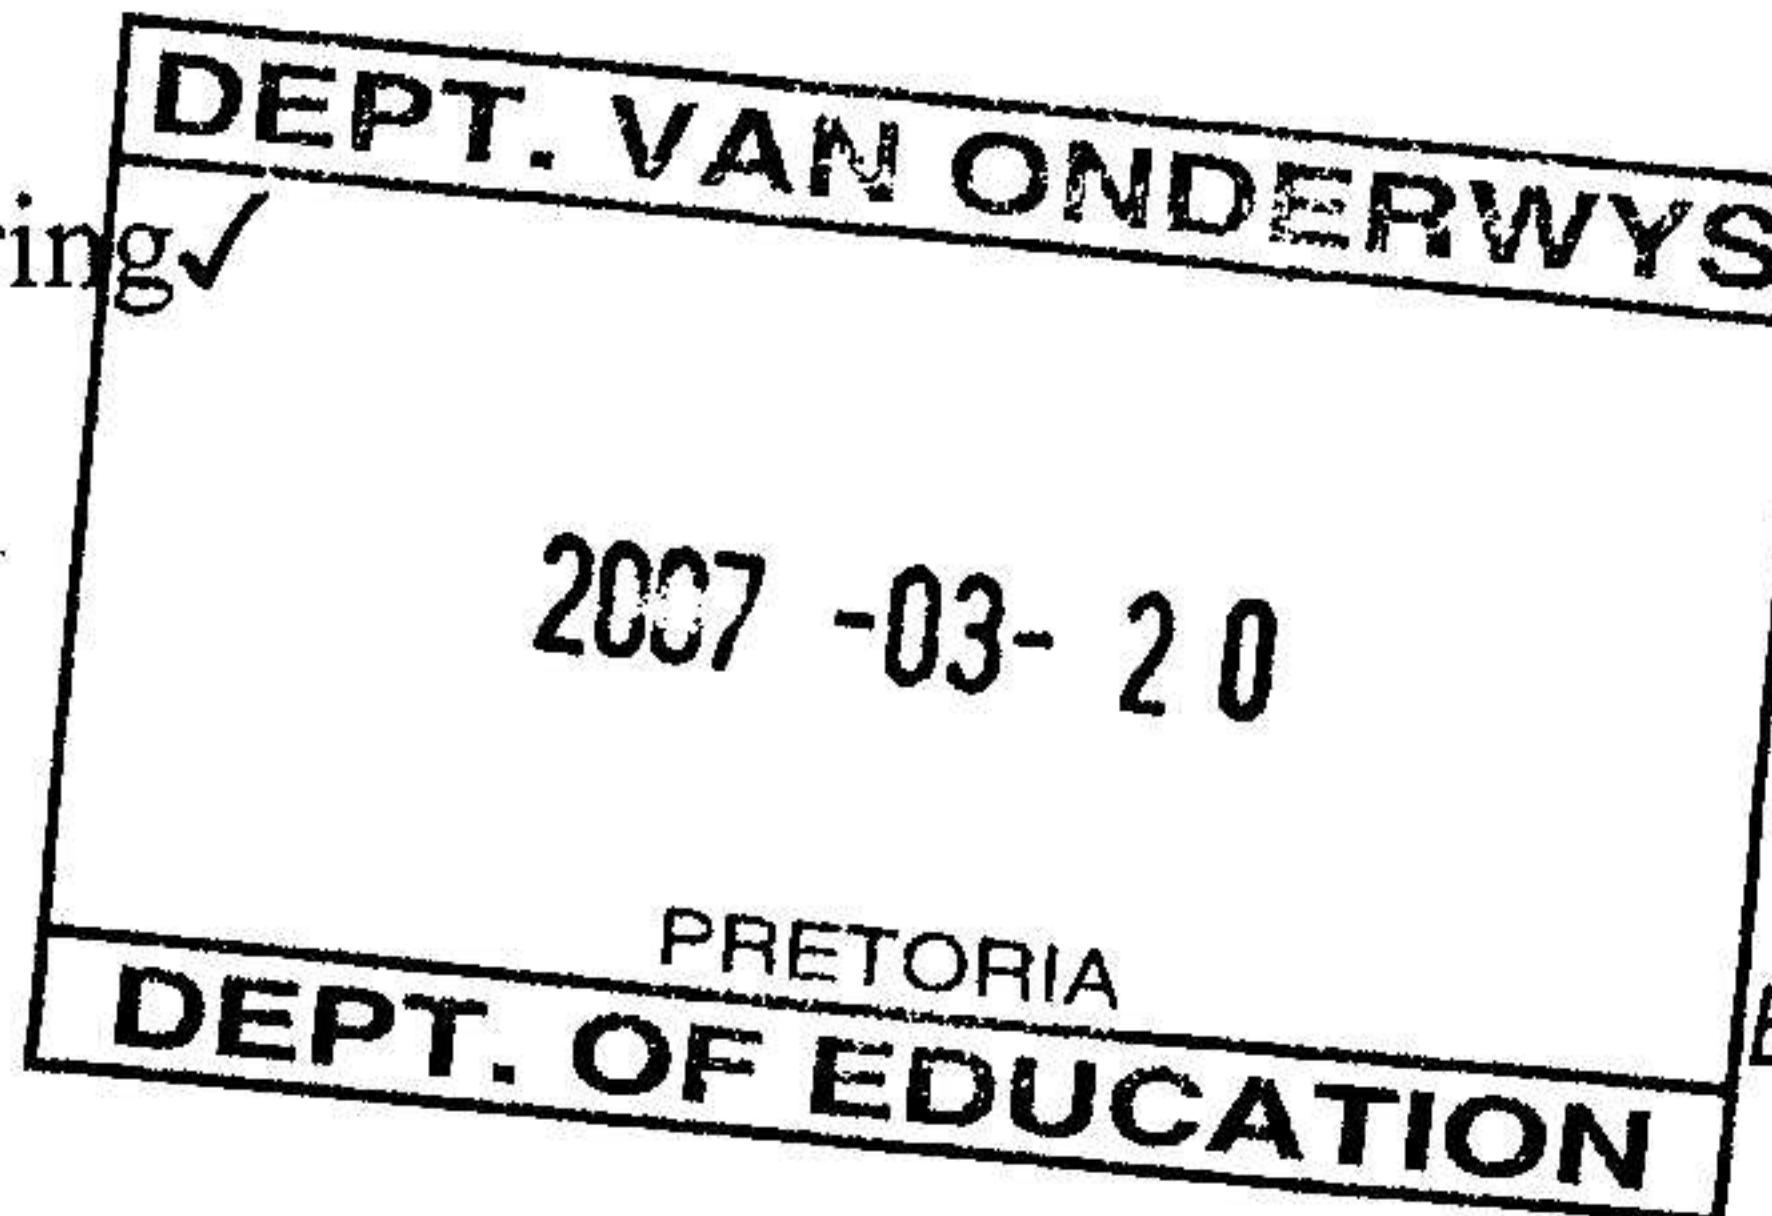

- 2.2.1 vertering van voedsel deur mikro-organismes in die herkouer✓
bakterieë en protosoë is meer algemeen✓ (2)

- 2.2.2 vertering van voedsel deur chemise bestandele wat in die diereliggaam geproduseer word✓
byvoorbeeld die verskillende ensieme wat deur kliere geproduseer word✓ X (2)

- 2.2.3 vertering van voedsel deur die kouproses of mastikasie✓
wat hoofsaaklik in die mond van die dier plaasvind✓
by die hoender word voedsel fyner gemaal in die spiermaag✓ (Enige 2) (2)

- 2.3 water dien as oplosmiddel en vervoermedium✓
 medium waarin chemiese reaksies plaasvind✓
 beheer liggaamstemperatuur✓
 dien as 'n smeermiddel✓
 gee vorm aan die liggaam✓
 beskerm die senuweesisteem teen fisiese skokke✓
 medium vir die uitskeiding van afvalstowwe✓
 gelei klank in die oor✓
 gelei lig in die oog✓ (Enige 4) (4)
- 2.4 Absorpsie van veteerde voedsel
- 2.4.1 proses waardeur 'n gas of bestanddeel in 'n oplossing✓
 versprei van 'n gebied met 'n hoë konsentrasie na 'n gebied met 'n laer konsentrasie✓ (2)
- 2.4.2 die deurgang van opgeloste molekules deur 'n semi-deurlatende membraan✓
 na 'n gebied met met 'n lae konsentrasie opgeloste stowwe✓
 waarvoor die mebraan nie deurlatend is nie✓ (Enige 2) (2)
- 2.4.3 proses waar molecules beweeg teen die konsentrasiegradiënt✓
 energie word benodig om dit te laat plaasvind✓ (2)
- 2.5 verteerbare droëmateriaal = $\frac{[7\text{kg} - (7\text{kg} \times 30\%)]}{100} - \frac{[3\text{kg} - (3\text{kg} \times 20\%)]}{100}$
 = $(7\text{kg} - 2.10\text{kg}) - (3\text{kg} - 0.6\text{kg})$ ✓
 = $4.9\text{kg} - 2.4\text{kg}$
 = 2.5kg or 3kg ✓✓ (5)
- 2.6 vorming van been en tandeknop✓
 bloedstolling✓
 onderhou die suurbasis ewewig✓
 sleutelrol in senuwee en spierfunksionering✓
 vir melk en eierproduksie✓ (Enige 4) (4)

VRAAG 3 : DIEREREPRODUKSIE

3.1 Voortplantingsorgane van die koei

3.1.1 (a) G✓ (1)

(b) B✓ (1)

(c) B✓ (1)

(d) I✓ (1)

(e) H✓ (1)

(f) G✓ (1)

3.1.2 (a) bestuur is 'n belangrike aspek van teling en indien dit nie korrek toegepas word nie kan dit lei tot onvrugbaarheid✓ nie die korrekte tydsberekening by die dek van jong verse en na kalwing✓

swak higiene toestande veral tydens kalwing✓

swak aangepaste diere mag lae vrugbaarheid vertoon✓

korekte koei tot bul verhouding✓ (Enige 2)

(2)

(b) vertraagde ovulasie – ovulasie op verkeerde tyd✓

anovulasie – geen vrystelling van die eiersel (ovum)✓

(2)

(c) oorvoeding – koeie wat te vet is sal nie ovuleer nie✓

ondervoeding – vertraagde geslagsrypheid en swak toestande verlaag vrugbaarheid✓

ongebalanseerde voeding – tekorte aan vitamiene en minerale✓

weiplante wat estrogeen bevat kan die bronstigheid beïnvloed bv. klawer✓

(Enige 2)

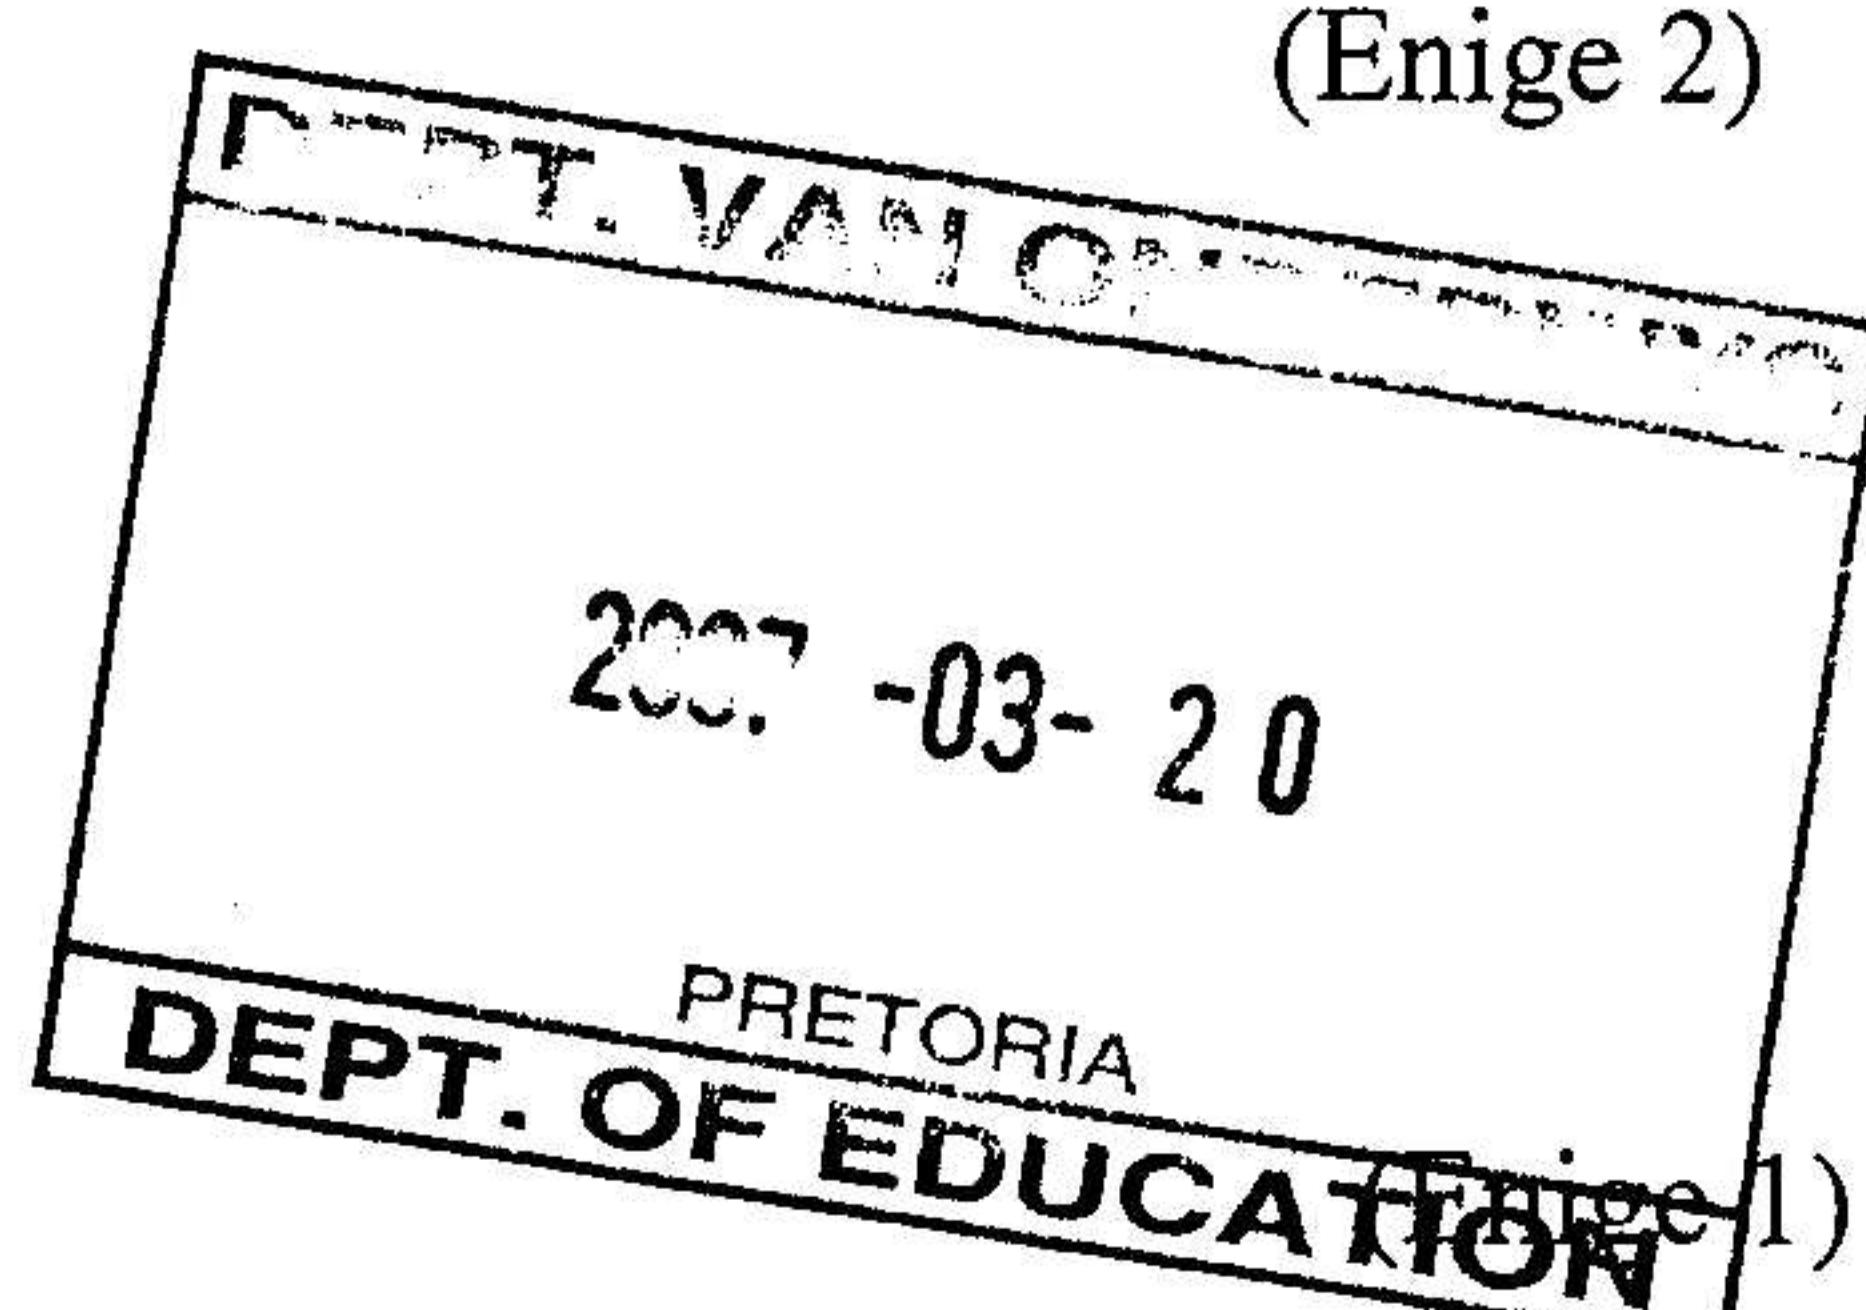

(2)

3.2 Funksies van hormone

3.2.1 sperm produksie✓

gelagsdrang en -aktiwiteit✓

manlike manlikheidseienskappe✓

(1)

3.2.2 veroorsaak die verslapping van die skeletspier van die bekkenholte om die geboorteproses te onderteun✓

(1)

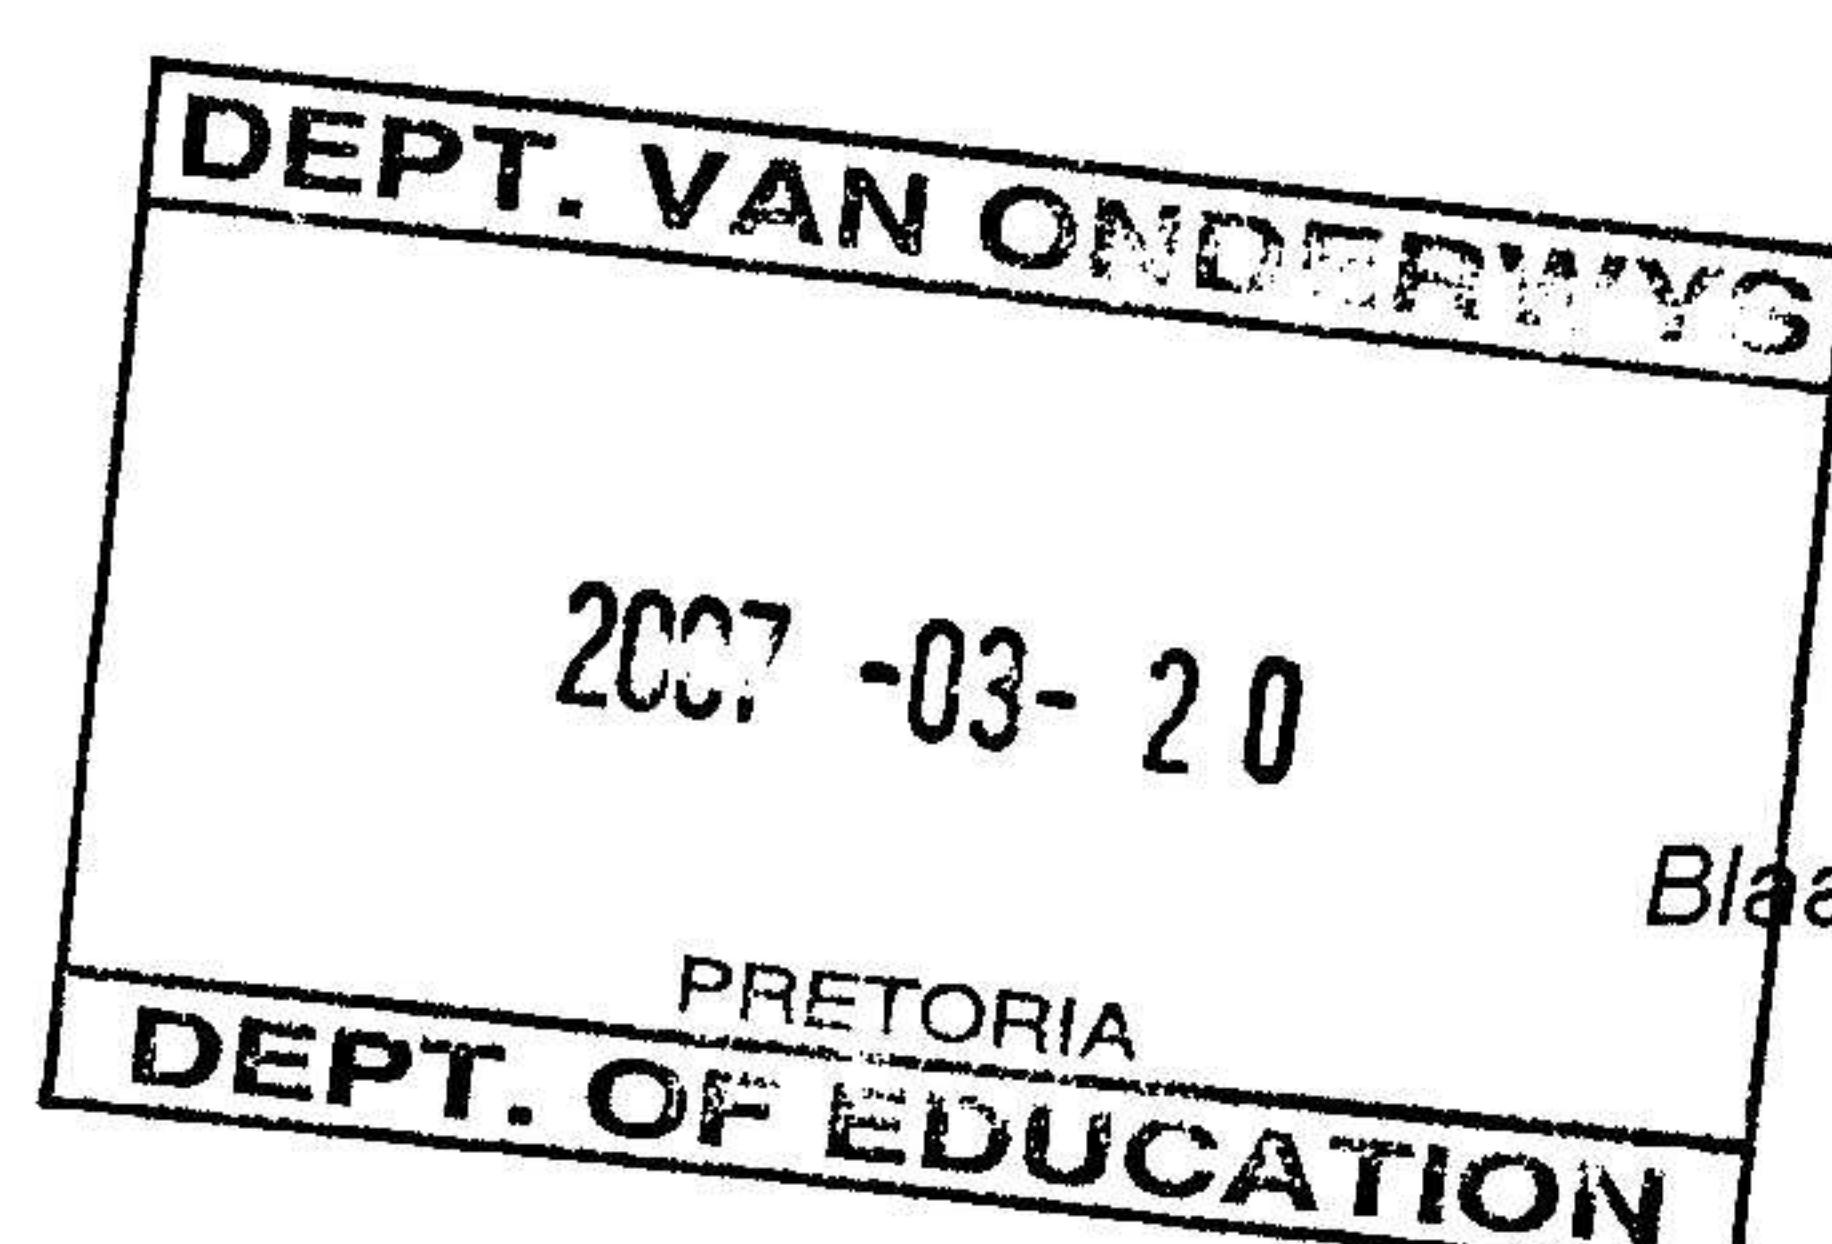

3.2.3 groei en rypwording van die Graafse follikel✓

(1)

- 3.3.4 onderhou dragtigheid deur die corpus luteum te stimuleer✓
verhoog die uitskeiding van progesteron✓
stimuleer die groei van die uier✓ (Enige 1) (1)

3.3 Kunsmatige inseminasie (KI)

- 3.3.1 'n melkery is 'n intensieve boerdery wat deur die toepassing van kunsmatige inseminasie bevoordeel word✓
bepaling van bronstigheid is maklik tydens melkings✓
inseminasie van koeie kan na melkings gedoen word✓
melkkoeie is meer mak en makliker om te insemineer✓
goeie bronre van gesonde, onbesmette en lewenskragtige semen is beskikbaar✓
arbeiders by melkerye is goed opgelei in die prosedures vir kunsmatige inseminasie✓
dit is die mees ekonomiese telingsmetode vir melkboere omdat geen bulle gekoop en versorg moet word✓
goeie rekordhoudingstelsels is in plek om nageslagtoetsing te doen✓ (Enige 5) (5)
- 3.3.2 bring die koei na 'n beskutte area en maak haar kalm en gemaklik✓
die apparaat wat gebruik word moet absoluut skoon wees✓
korrekte wyse ontdooi en voorbereiding van semen✓
verwyder mis van rektum✓
hanteer die pistolette met die een hand✓
en die ander hand in die rektum hou die serviks vas✓
rek die vagina uit om plooï te verwijder✓
die voorpunt van die pistolette word deur die serviks begelei✓
die helfde van die semen word in die serviks vrygelaat✓
die ander helfde word in die baarmoeder vrygelaat✓
onttrek die pistolette✓
stumbleer die geslagsdele om die ekskresie van oksitosien te bevorder✓ (Enige 6) (6)

3.4 Kruisteling

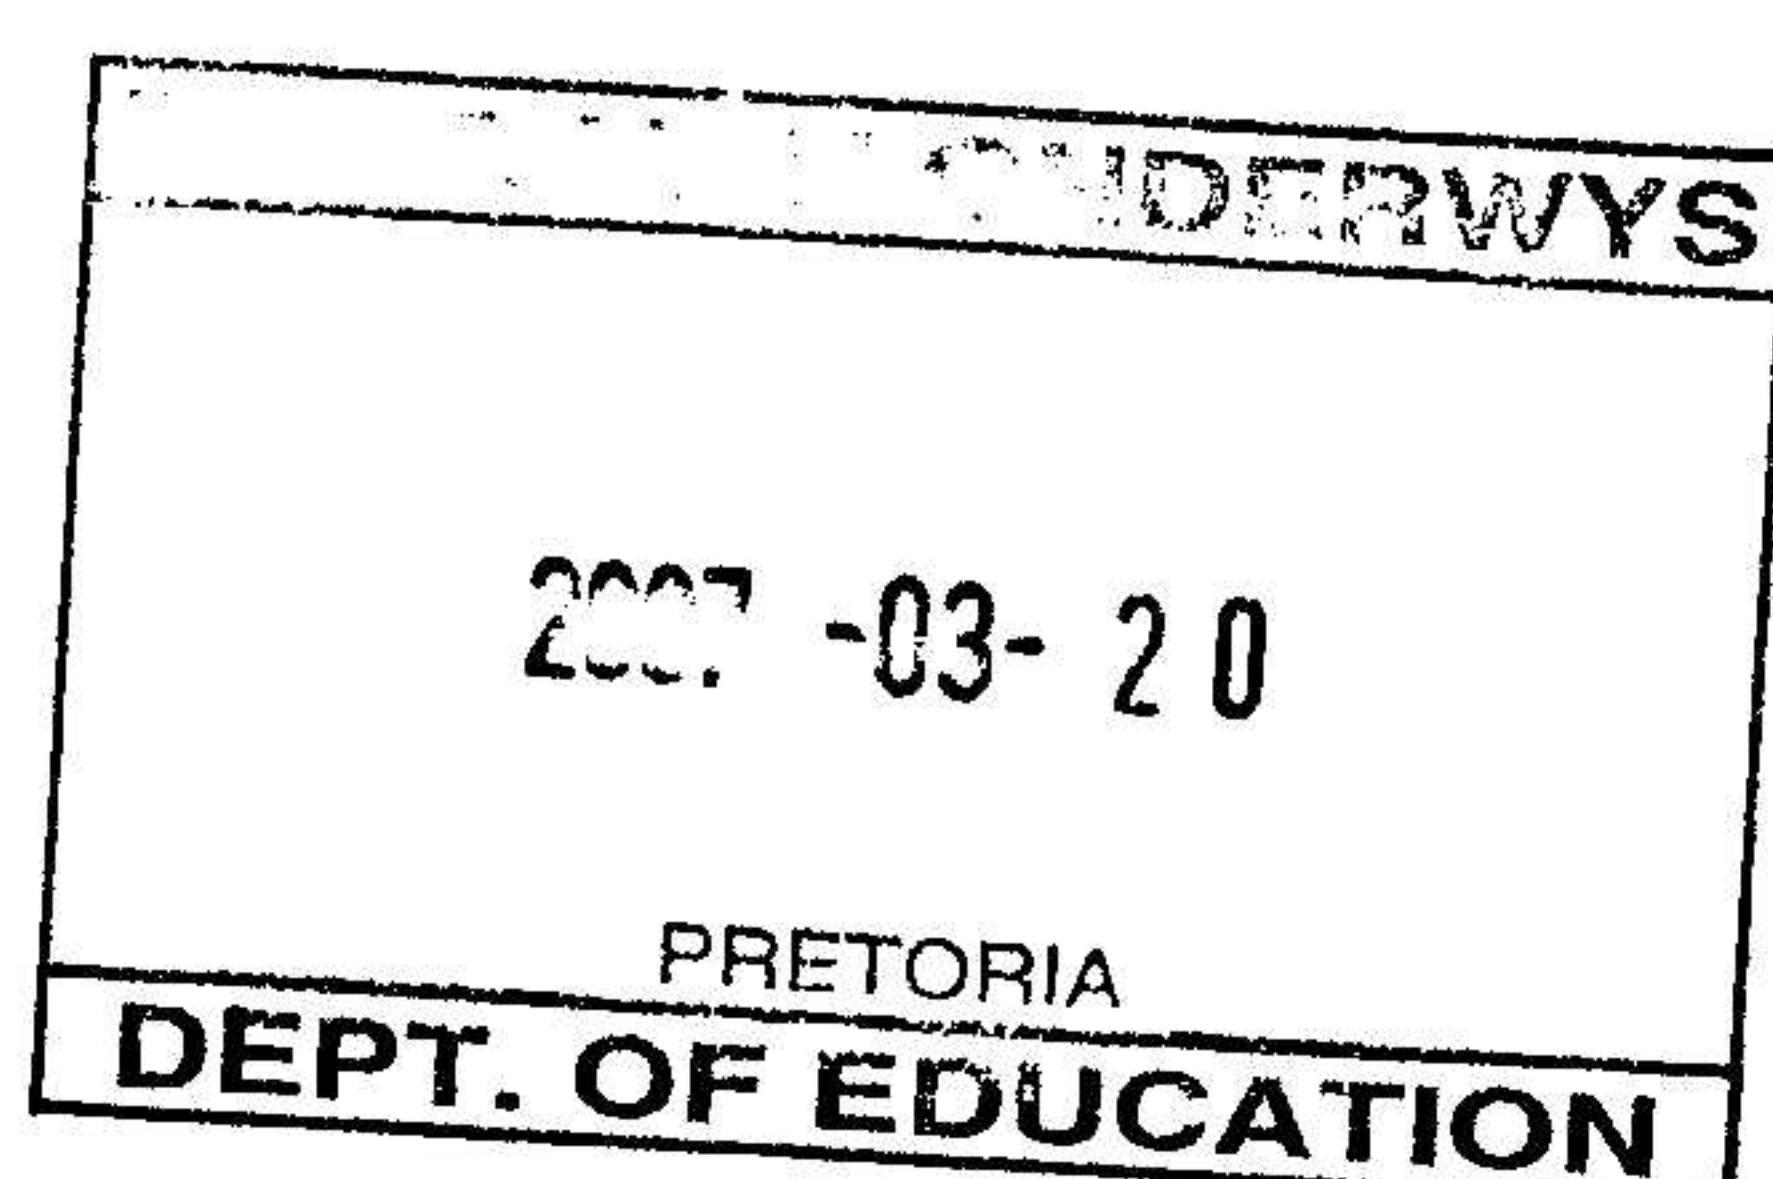

- 3.4.1 paring van twee suiwer geteelde diere van verskillende rassem✓
verhoogde lewenskragtigheid by nageslag as nie verwante diere gepaar woor
presteer beter as die gemiddeld van hul ouers✓ (3)

- 3.4.2 ontwikkeling van nuwe rassem✓
hoër produksie bv. wol, melk, eiers, beesvleis✓
vinniger groeitempo✓
groter weerstand teen siektes✓
hoër vrugbaarheid✓
beter aanpasbaar✓
beter voerverbruik✓
beskik oor beter moedereienskappe✓ (Enige 5) (5)

[35]

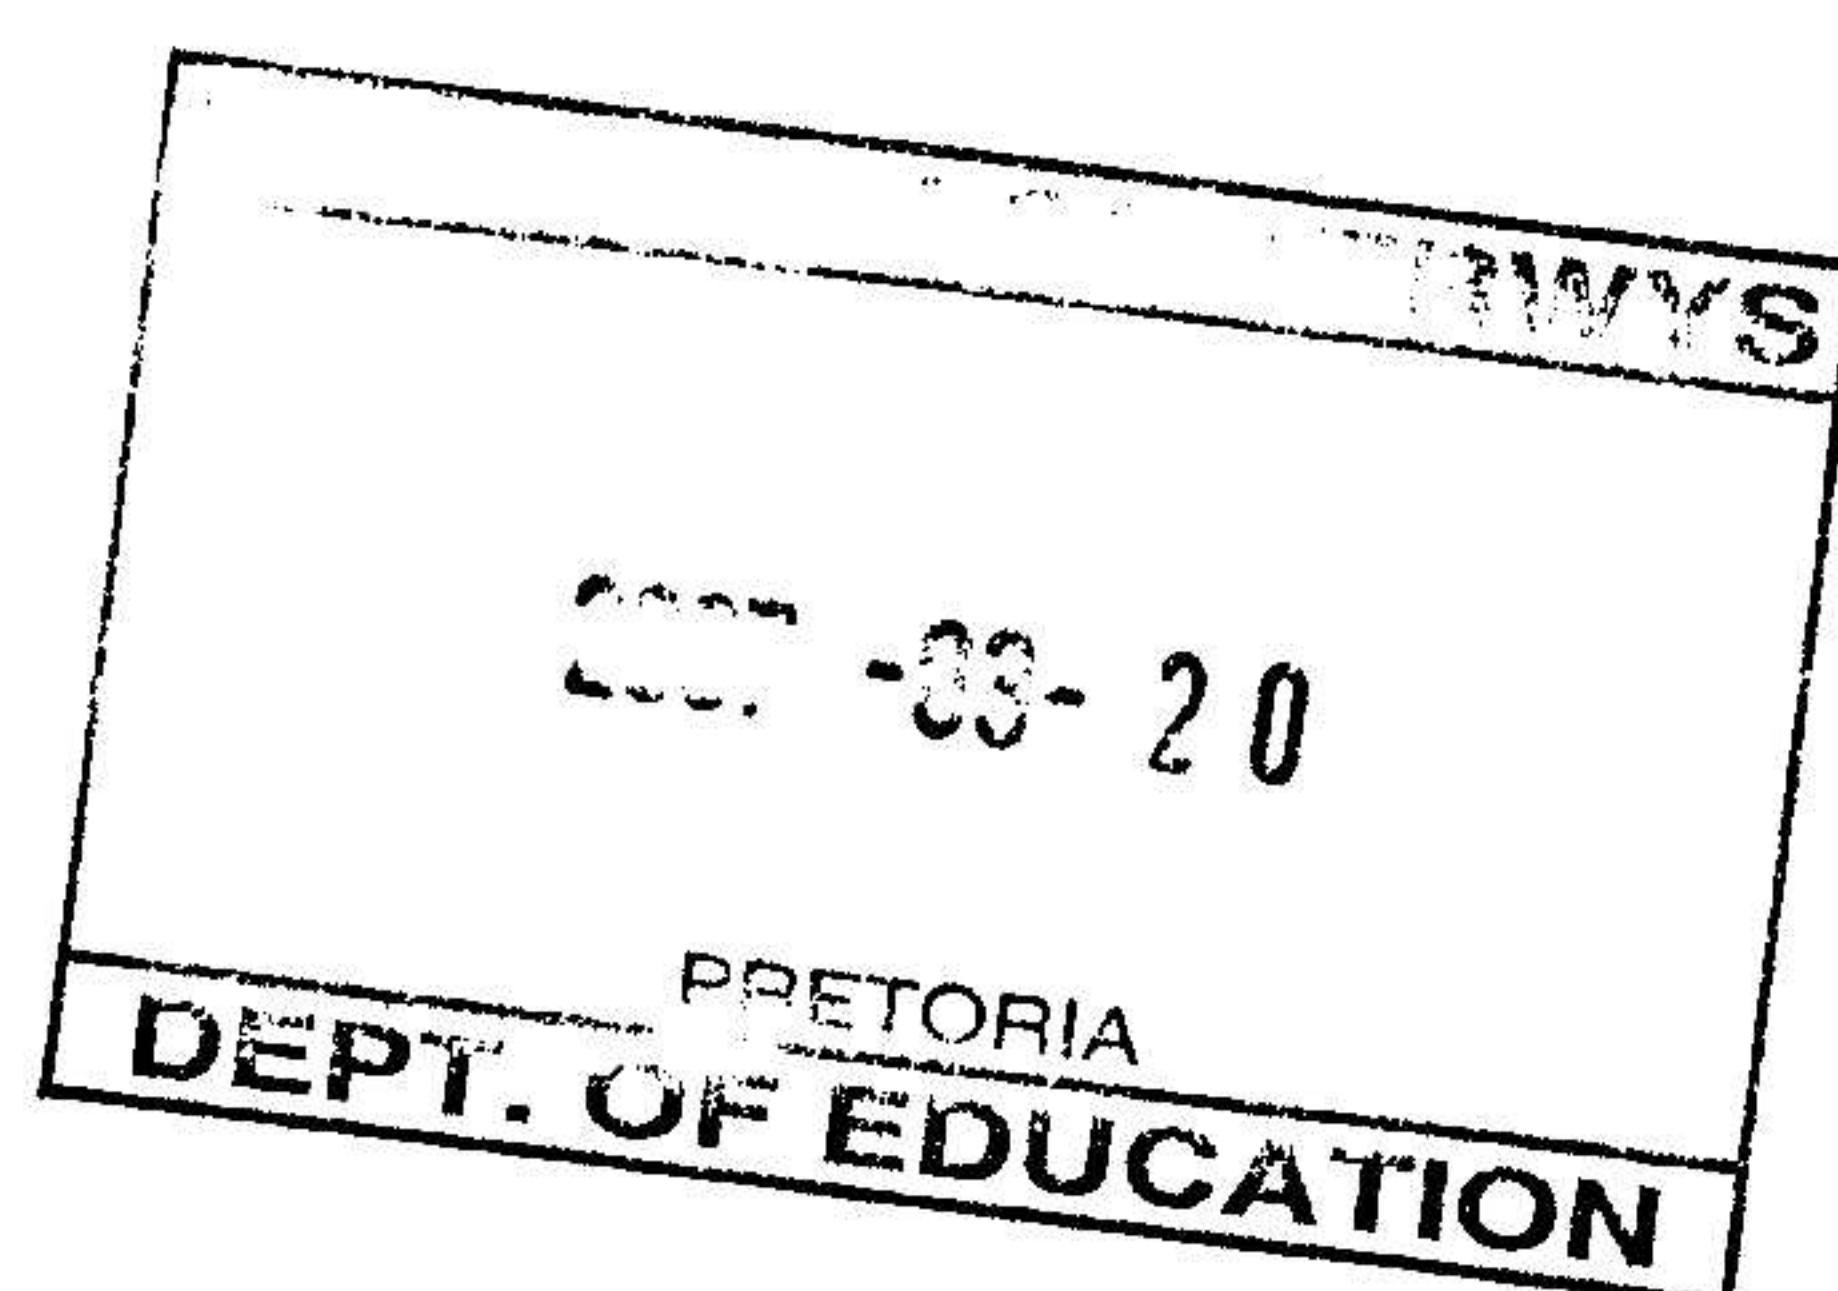

VRAAG 4 : OPTIMALE HULPBRONBENUTTING

- 4.1 hoë produsentepryse mag 'n voordeel wees vir een gewas✓
grond mag gekik wees vir 'n beperkte aantal gewasse✓
klimaat kan boere beperk tot 'n beperkte aantal gewasse✓ (3)
- 4.2 infiltrasietempo tempo van die grond (grondtipe)✓
topografie✓
hoeveelheid water beskikbaar✓
die hoeveelheid soute in die grond✓
waterkwaliteit✓
koste✓
tipe gewas✓
metode van grondbewerking✓ (Enige 5) (5)

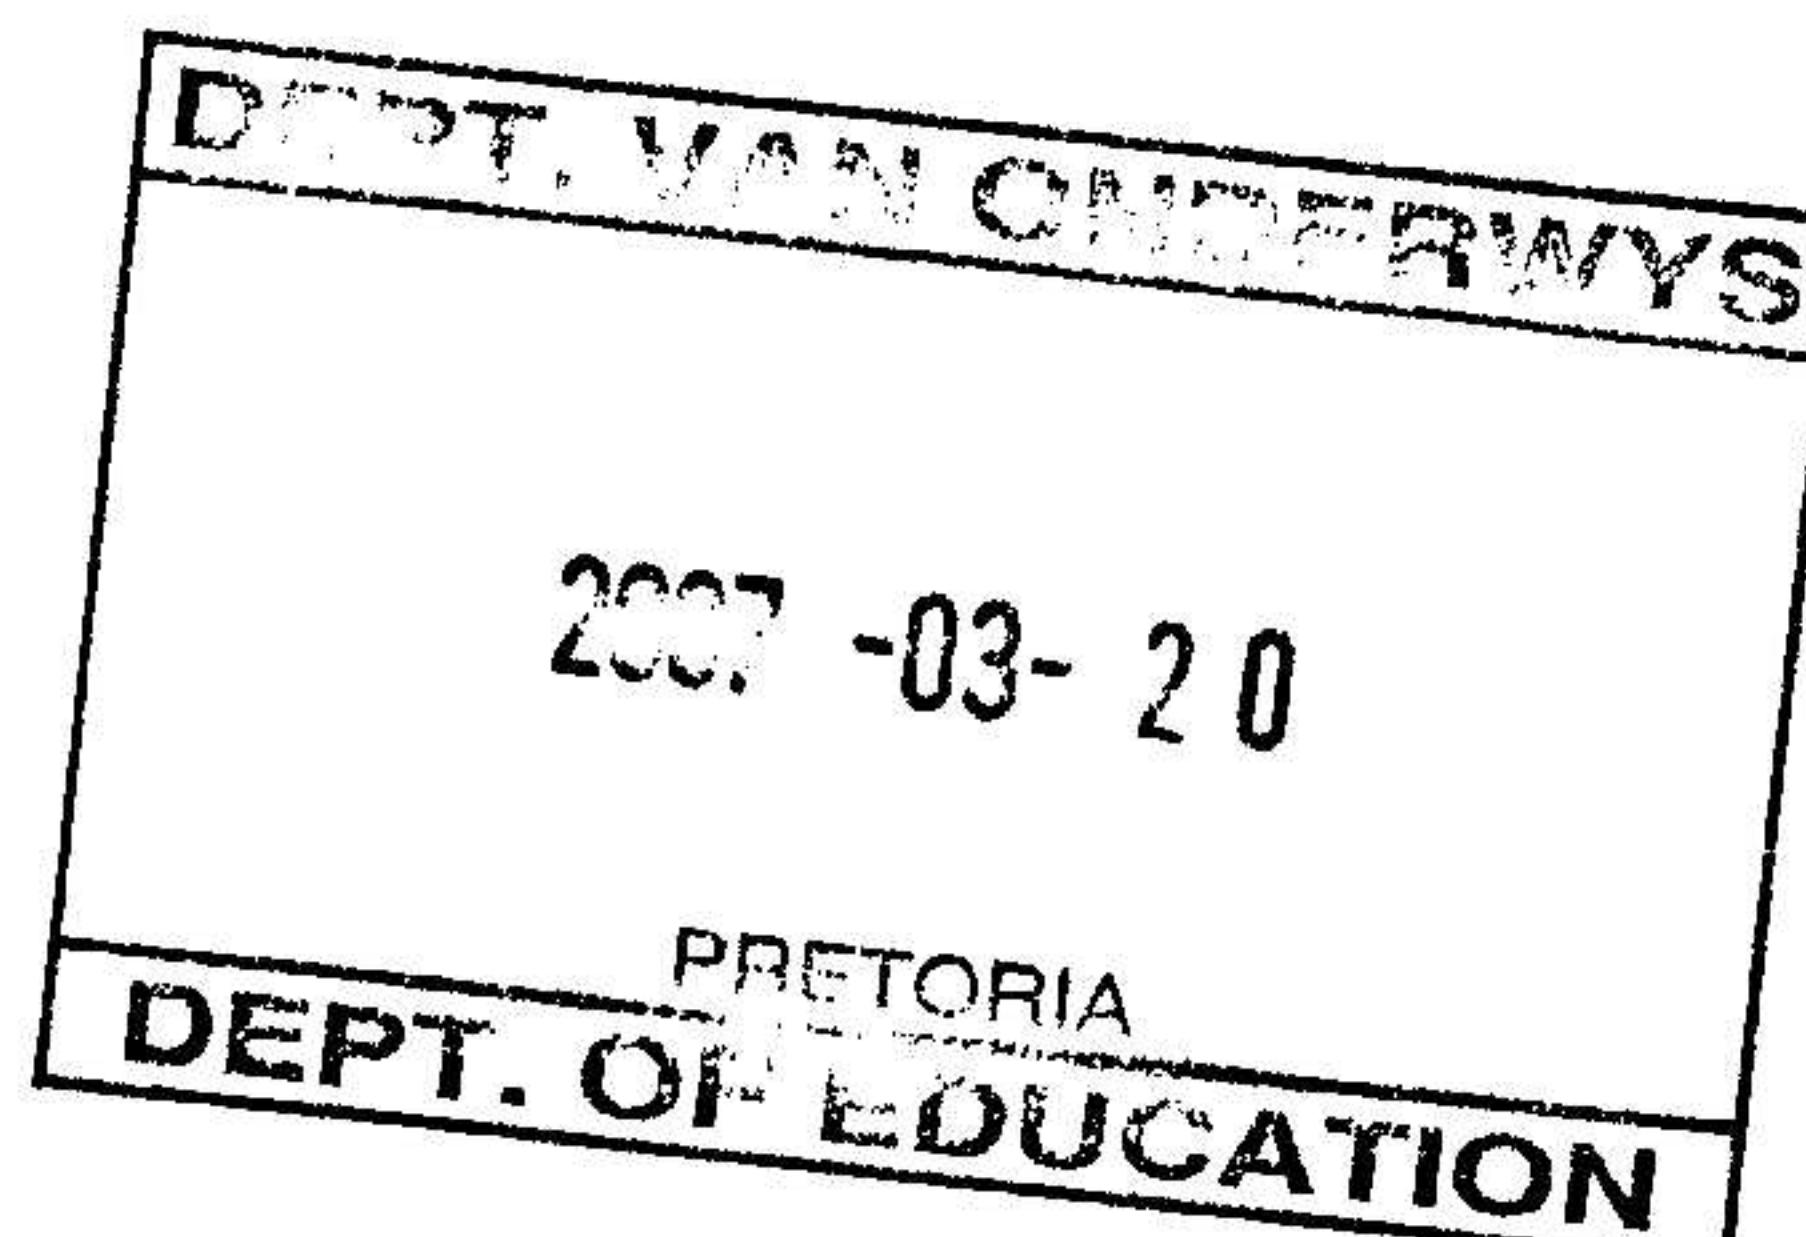

- 4.3 grond stoor en stel water beskikbaar vir gebruik deur plante✓
verskaf lug vir respirasie van plantwortels en mikro-organismes✓
stel plantvoedingstowwe vry vir plante✓
dien as 'n groeimedium vir plante✓
laat waterinfiltrasie toe✓ (5)
- 4.4 beter deurlugting van die grond✓
ontwikkeling van 'n beter wortelstelsel✓
verhoog grondtemperature✓
stimuleer microbe aktiwiteit✓
maklik grondbewerking✓
verhoogde infiltrasietempo in die grond✓
verwydering van skadelike stowwe✓ (Enige 6) (6)
- 4.5 totale opgeloste soute (soutinhoud)✓
turbiditeit✓
biologiese materiaal✓
natrium adsorpsieverhouding✓
giftige ione bv boor✓ (Enige 3) (3)
- 4.6 gee plante 'n kans om sade te vorm✓
om voedingstowwe te berg vir hergroei✓
vestiging van jong saailinge✓
herstel van die veld vir die volgende seisoen✓
veld verbetering✓ (Enige 3) (3)

[25]

VRAAG 5 : LANDBOU-EKONOMIE

- braaipakke✓ (2)
- (b) vrieskas✓
trollie✓ (2)
- (c) winkel gebou✓
elektriese fasiliteite✓ (2)
- 5.1.2 bederfbaarheid / stoor fasiliteit✓ ✓ (2)
- 5.1.3 totale verlies weens verrotting✓
lae pryse✓ (2)
- 5.2 Korttermyn krediet✓
Bv. Geld gebruik vir goedere benodig in die produksieproses oa. saad, kunsmis,
onkruiddoders, plaagdoders ens.✓ (slegs een voorbeeld) (2)
- Mediumtermyn krediet✓
Bv. geld vir die aankoop van lewende hawe, masjienerie, implimente ens.✓ (2)
(slegs een voorbeeld)
- Langtermyn krediet✓
bv. geld vir die aankoop van grond / plaas, oprig van geboue of die bou van 'n dam ens. (2)
(slegs een voorbeeld)
- 5.3 Grafiek
- 5.3.1 (a) W – aanbodkurwe✓ (1)
(b) T – vraagkurwe✓ (1)
(c) X – surplus by die mark✓ (1)
(d) Y – tekort by die mark✓ (1)
- 5.3.2 aanbod is gelyk✓
aan die vraag✓ (2)

- 5.4 direkte verkope aan die verbruiker✓
direkte verkope aan die voedselverwerkingsfabrieke✓
direkte verkope aan die groothandelaars✓
direkte verkope aan die kleinhandelaars✓
verkope deur 'n middelman na verbruikers✓

(Enige 3)

(3)
