UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS General Certificate of Education Ordinary Level

COMBINED SCIENCE

Paper 2

October/November 2006

2 hours 15 minutes

Candidates answer on the Question Paper. No Additional Materials are required.

Candidate Name							
Centre Number				Candidate Number			

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of **20** printed pages.

1 Fig. 1.1 shows a ray of light entering and passing through a parallel-sided plastic block.

For Examiner's Use

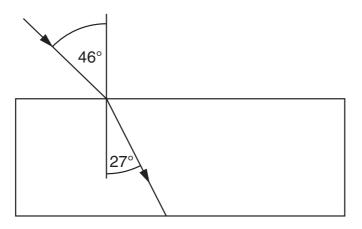

Fig. 1.1

- (a) On Fig. 1.1 draw an arrow to show the path of the ray after it has left the plastic block. [2]
- **(b)** Calculate the refractive index of the plastic.

[2]

2 (a) What type of substance are all enzymes?

.....[1]

(b) State the effect of the enzyme amylase on the conversion of starch to maltose.

.....[1]

(c) Explain two ways in which chewing a piece of bread helps the process of digestion.

1.

2.

.....[2]

For Examiner's Use

3

	is a mixture of gases. s mixture includes the noble gases helium and argon.
(a)	Helium is used to fill airships and balloons.
	State two reasons why helium is a good choice for this use.
	1
	2[2]
(b)	Argon is used to fill light bulbs.
	tungsten filament argon
	(i) Why are light bulbs not filled with air?
	[2]
	(ii) Use your knowledge of the electronic structure of argon to explain why it is a good choice to fill light bulbs.
	[2]

4 Fig. 4.1 represents a hydroelectric power station. Water flows from an upper lake to a lower lake to generate electrical energy.

For Examiner's Use

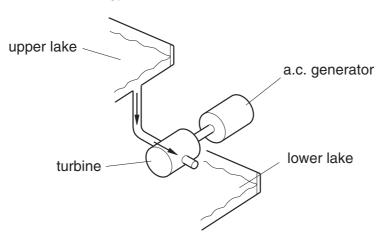

Fig. 4.1

- (a) Name the type of energy lost by the water
 - (i) as it falls from the upper lake,
- energy [1]
- (ii) as it slows down in the turbine.
- energy [1]
- **(b)** Complete Fig. 4.2 to show how the voltage output of a simple a.c. generator varies with time.

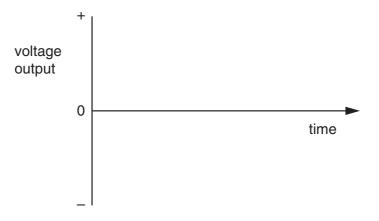

Fig. 4.2

© UCLES 2006 5129/02/O/N/06

(c) A small generator has an output of 20 W.
Calculate how much electrical energy is produced in 3 minutes.

For Examiner's Use

[3]

nloric acid is a strong acid which turns Universal Indicator red.	For
Name the ion present in hydrochloric acid which causes acidity.	Examine Use
Suggest the pH of hydrochloric acid.	
student adds hydrochloric acid to calcium carbonate. The colourless gas produced	
drochloric acid limewater calcium carbonate	
Fig. 5.1	
Describe the change in appearance of the limewater as the colourless gas passes through it.	
[1]	
Name this gas that is produced during the reaction of hydrochloric acid and calcium carbonate.	
Suggest the name of the salt produced by the reaction between hydrochloric acid and calcium carbonate.	
	Suggest the pH of hydrochloric acid. [1] Student adds hydrochloric acid to calcium carbonate. The colourless gas produced sees through limewater as shown in Fig. 5.1. Describe the change in appearance of the limewater as the colourless gas passes through it. [1] Name this gas that is produced during the reaction of hydrochloric acid and calcium carbonate. [1] Suggest the name of the salt produced by the reaction between hydrochloric acid and calcium carbonate.

5

6 Fig. 6.1 shows an external view of the heart.

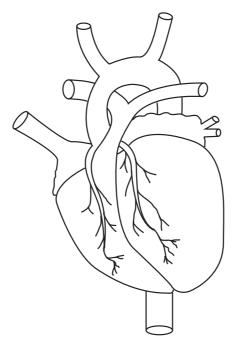

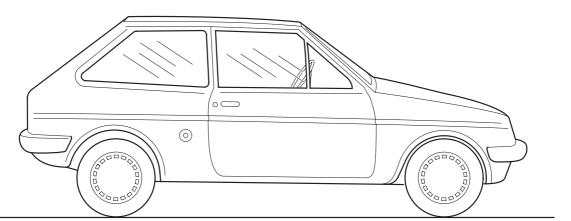

Fig. 6.1

(a)	(i)	Name the tissue that is supplied with blood by the coronary arteries.
		[1]
	(ii)	Suggest three substances that the blood supplies to this tissue.
		1
		2
		3[3]
(b)	Ар	erson's diet may cause them to suffer from coronary heart disease.
	(i)	Name a substance in a diet that may cause coronary heart disease.
		[1]
	(ii)	State the change in the coronary arteries that leads to coronary heart disease.
		[1]
	(iii)	State one other cause of coronary heart disease.
		[1]

7 The car in Fig. 7.1 has a mass of 840 kg.

For Examiner's Use

Fig. 7.1

(a) The gravitational field strength g on Earth is 10 N/kg. Calculate the weight of the car.

[2]

(b) The force produced by the engine that accelerates the car is 2100 N. Calculate the acceleration of the car.

[3]

Atoms are made up of three types of particle.

(ii) Define the term *nucleon number* (mass number).

(b) Bromine is element 35 in the periodic table.

The atom is represented by

Deduce the values of A and Z.

.....

.....

Z

8

			·		
(a)	(i)	Complete the table to these three types of part		ss and the relative ch	arge of each of
		particle	relative mass	relative charge	
		proton		+1	
		electron	1 1840		
		neutron	1		
					[3]

.....[1]

An atom of an isotope of bromine contains 35 protons, 35 electrons and 44 neutrons.

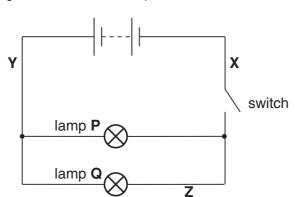

[^]zBr

9 Fig. 9.1 is a circuit diagram for the headlamps of a car. P and Q are identical lamps.

For Examiner's Use

Fig. 9.1

- (a) On Fig. 9.1, draw the symbol for a voltmeter that is connected into the circuit so that the voltage across lamp **Q** may be measured. [2]
- (b) The switch is closed. The current in lamp **Q** is 3.0 A and the potential difference across it is 12 V.
 - (i) Calculate the resistance of the lamp.

[3]

(ii) Determine the current at

X, A

Y, A

Z. A [3]

(c) Suggest why the lamps are connected in parallel rather than in series.

[1]

10 Fig. 10.1 shows the structures of four organic compounds, A, B, C and D.

 CH_3 C CH_3 $CH_$

В

Fig. 10.1

(a) Which compound is

A

- (i) an alkene,
- (ii) an alcohol,

- **(c)** All four compounds burn in excess oxygen to give the same two products. State the names of these two products.

and	[2	1
and	 լ–	·J

For Examiner's Use 11 Fig. 11.1 shows a plant in a pot of damp soil on a balance. The pot and the soil are covered by a plastic bag.

For Examiner's Use

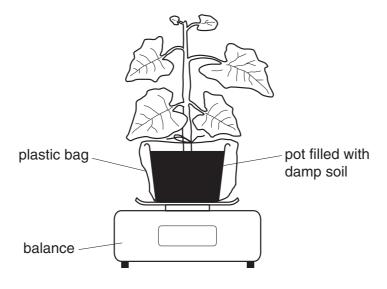

Fig. 11.1

(a)	Dur	ing the next hour, the reading on the balance decreases.
	(i)	Name the substance that is being lost from the plant.
		[1]
	(ii)	Name the structures in the leaves of the plant through which the substance is lost.
		[1]
	(iii)	Name the process that causes the decrease in mass.
		[1]
(b)	(i)	Describe how the appearance of the plant will alter if the apparatus in Fig. 11.1 is left on the balance for a week.
		[1]
	(ii)	Explain your answer.
		[2]

© UCLES 2006 5129/02/O/N/06 12 The radioactive isotope strontium-90 emits beta-particles.

For
Examiner's
Πea

- (a) State the nature of a beta-particle. [1]
- (b) State from which part of the atom the beta-particle is emitted.[1]
- (c) Fig. 12.1 shows how the activity of a sample of strontium-90 varies with time.

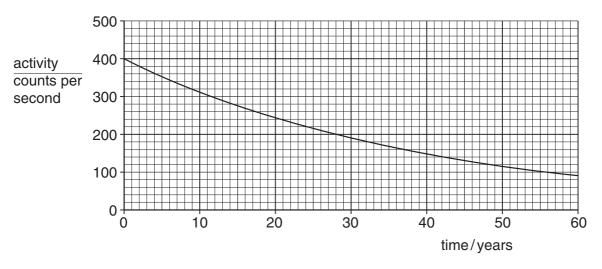

Fig. 12.1

Use Fig. 12.1 to determine the half-life of strontium-90.

half-life = years [1]

13 Magnesium is in Group II of the Periodic Table. The electronic structure of magnesium is 2, 8, 2.

For Examiner's Use

[1]

(a) (i) Draw a diagram showing the arrangement of the electrons in a magnesium ion.

- (ii) Write the formula of the magnesium ion.[1]
- (b) Fig. 13.1 shows magnesium burning in carbon dioxide. The reaction produces a black solid (carbon) and a white solid (magnesium oxide).

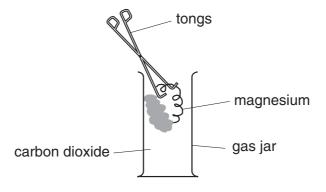

Fig. 13.1

(i) Complete the equation for the reaction by adding the state symbols.

$$2Mg() + CO2() \longrightarrow 2MgO() + C()$$
 [1]

(ii) Calculate the relative molecular mass of carbon dioxide. $[A_r: C,12; O,16.]$

.....[1]

(iii) Calculate the mass of magnesium that is required to react completely with 2.2 g of carbon dioxide.

[A_r: Mg,24.]

.....[2]

For Examiner's Use

14	(a)	(i)	Name the two types of cell that form a zygote during sexual reproduction.	
			1. 2.	
		(ii)	When these two cells meet, their nuclei fuse.	[2]
			Name this process.	
	<i>(</i> 1.)			[1]
	(b)	Fig	1.14.1 shows part of the female reproductive and urinary systems.	
			E A B C	
			Fig. 14.1	
		/i)		
		(i)	Name the parts labelled	
			A ,	
			B,	
			C	[3]
		(ii)	State the function of the parts labelled	
			D,	
			E	
				[2]
	(c)	On	Fig. 14.1 mark an X where a zygote will develop.	[1]

15 A road is made by laying slabs of concrete with gaps between them. Fig. 15.1 shows this road at low temperature.

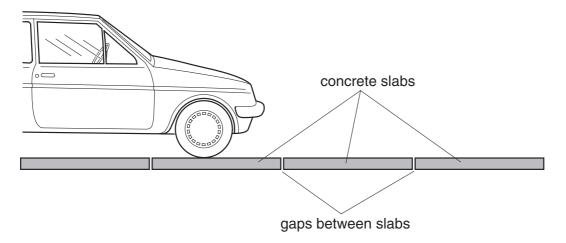

Fig. 15.1

- (a) The temperature increases. Suggest what happens to
 - (i) the concrete slabs,[1]
 - (ii) the gaps between the slabs.[1]
- (b) Another road is laid on a cold day with no gaps between the concrete slabs.

Suggest what may happen to this road on a very hot day.

.....[1]

16 A small piece of each of four metals is placed in a separate test-tube containing dilute hydrochloric acid.

For Examiner's Use

Results of this experiment are shown in Fig. 16.1.

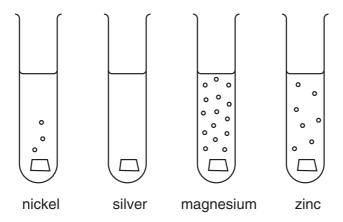

Fig. 16.1

(a)	Use	Jse Fig. 16.1 to deduce the reactivity series of these metals.					
	mos	t reactive					
	leas	t reactive		[1]			
(b)	(b) The reaction between a metal and an acid produces a salt and hydrogen.						
	(i)	Draw a dot and	d cross diagram to show the bonding in a molecule of hydrogen.				
				[1]			
	(ii)	Name the salt	produced when magnesium reacts with hydrochloric acid.				
				[1]			
((iii)	State the type	of bonding present in this salt	[1]			

					18		
17	(a)	The	following words	describe organisms	found in a food c	nain.	
			carnivore	decomposer	herbivore	producer	
		Wri	te these words in	the boxes in the ord	der in which they	occur in a food chain.	
			x	Y	>		[2]
	(b)	(i)	State the origina	al source of the ene		l.	[1]
		(ii)	Name the proce	ss that makes this e	energy available to	the food chain.	
							[1]
		(iii)	Referring to the	diagram in (a), at w	hich stage, X , Y o	r Z does most energy	pass?
							[1]
	(c)	Car	bon passes alonç	g a food chain in car	bon compounds.		
		(i)	Suggest a carbo another.	on compound in wl	nich carbon migh	t pass from one orga	anism to

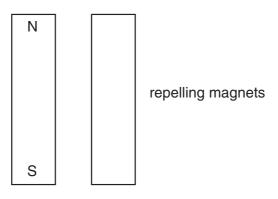

Name the compound in which carbon leaves the food chain.

For Examiner's Use

18 (a) Fig. 18.1 shows two magnets that are repelling each other. One of the magnets has poles marked on it.

For Examiner's Use

On Fig. 18.1, label the poles on the unmarked magnet.

[1]

Fig. 18.1

(b) Fig. 18.2 shows an electromagnet. The electromagnet has an iron core.

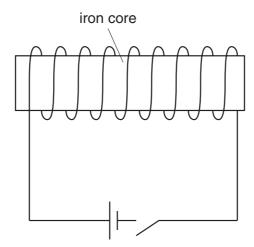

Fig. 18.2

Explain why brass and steel are **not** used for the core.
