

THE ROYAL COLLEGE OF SURGEONS OF EDINBURGH
MEMBERSHIP IN PAEDIATRIC DENTISTRY

Time: 3 hours

Part II

Paper I

ALL questions to be answered

1. What advice would you give to a mother who telephones your surgery to say that her 9-year-old son has knocked out his front tooth? Discuss your immediate and long term care of the child.
2. An 8-year-old child with amelogenesis imperfecta complains of sensitivity from their permanent teeth on cleaning. Classify the types of amelogenesis imperfecta. How do the different types of amelogenesis imperfecta influence the management of the dentition of this child?
3. What is dens evaginatus? Describe the problems that may present in children with such a condition. Outline the possible methods of treatment and the likely prognosis.

Paper II

ALL questions to be answered

1. A 5-year-old child with mild haemophilia presents with intermittent toothache. Discuss the factors that should be considered in the management of this child's toothache.
2. During the past decade there has been a global decline in dental caries experience in children. Discuss the possible contributory factors in such a trend globally and with particular reference to circumstances in Hong Kong.
3. A 10-year-old presents with failed eruption of a maxillary central incisor. What investigations would you carry out? How do the results influence your management of the child?
